A former petroleum release at the Lords Armory site was granted a status of "Conditional No Further Action" (CNFA) by SCDHEC in 2003. The CNFA status was granted provided land use restrictions were in place and varying amounts of petroleum contamination were allowed to remain in place at the site. Because of petroleum contamination remaining in place at the site and the potential for this contamination to be encountered during construction activities, this site is an AOC during this Phase II ESA.

Partex / Eumeric Holdings

An administrative order (97-11-HW) was issued on the Partex/Eumeric Holdings facility by SCDHEC in 1997 for violations of the South Carolina Hazardous Waste Management Regulations and the South Carolina Pollution Control Act. Partex/Eumeric Holdings failed to comply with the following regulations.

1. R.61-79.262.11, a person who generates a solid waste, as defined in R.61-79.261.2 must accurately determine if that waste is a hazardous waste;
2. R.61-79.262.12(a), a generator must not treat, store, dispose of, or offer for transportation, hazardous waste without having received an US Environmental Protection Agency (EPA) identification number from SCDHEC;
3. R.61-79.262, Subpart C, pre-transport requirements for generators of hazardous waste;
4. R.61-79.262, Subpart D, record keeping and reporting requirements for generators of hazardous waste;
5. R.61-79.262.80, a generator must clean up any hazardous waste discharge that occurs during generation of processing or storage and take such other action as may be required or approved by Federal, State, or local officials so that the hazardous waste discharge no longer presents a hazard to human health of the environment;
6. 48-1-90 of the South Carolina Pollution control Act in that it shall be unlawful for any person, directly or indirectly, top throw, drain, run, allow to seep or otherwise discharge into the environment of the state organic or inorganic matter, including sewage, industrial wastes and other wastes, except as in compliance with a permit issued by SCDHEC.

Additional information regarding these violations and compliance or non-compliance of issues addressed in the administrative order was not found during file review and have likely been purged from SCDHECs file system. Due to the lack of information on this facility and known past soil contamination, this site is an AOC during this Phase II ESA.

Paving Equipment of the Carolinas

This property formerly stored #2 fuel oil and was a manufacturer of petroleum-based asphalt. Because of the storage of #2 fuel oil and past use of the property, this site is an AOC during this Phase II ESA.

Handy Pantry 28 Food Mart

The facility is a former LUST site and was listed on the 2008 Groundwater Contamination Inventory (GWCI) database compiled by SCDHEC. No additional information was available in the SCDHEC files. Due to the lack of additional information and the classification of the site as a LUST site, this site is an AOC during this Phase II ESA.

T&G Country Store

This site is located within the project corridor on the eastern side of Highway 21 and is a known LUST site with limited information available. Because of the known release of petroleum at this site, this site is an AOC during this Phase II ESA.

Times Turn Around 10

This site is located within the project corridor on the eastern side of Highway 21. This site is a known LUST site with limited information available, and currently operates as a fuel retailer. Because of the known release of petroleum at this site, the site is considered an AOC.

2.5 Previous Environmental Investigation Summary

Numerous soil and groundwater investigations have been conducted at different locations throughout the corridor. The following environmental investigations regarding AOCs involved in this Phase II ESA were reviewed during the performance of this assessment.

1. *Soil Sampling Analysis Report* by Environmental Management Solutions, Inc. (EMS) dated February 26, 1997 for Partex, Inc. / Eumeric Holdings. SCDHEC concluded that the areas of concern identified within the report had been adequately addressed with regard to the spill area on the exterior of this facility. Partex, Inc. / Eumeric Holdings is located at 3551 Highway 51.

2. *Post Remediation Sampling Report* conducted by Consultech Environmental, Inc. for Lords Armory dated August 18, 2003. Consultech Environmental, Inc. concluded that concentrations of the contaminants of concern in the monitoring wells that have site-specific target levels (SSTLs) are below SSTLs at the site, and recommended that all of the monitoring wells be properly abandoned, and that no further action be taken at the site. Lords Armory is located at 3660 Highway 51.

2.6 Potential Receptors

An assessment was conducted to evaluate the potential for sensitive human health or ecological receptors within or immediately down gradient project corridor. Our findings are summarized below:

- **Wetlands:** Based on the U.S. Fish and Wildlife Service's *National Wetlands Inventory* (NWI, 2012) and observations made during the site walkover, there are no **mapped** wetlands located within the project corridor. A wetlands survey is beyond the scope of this Phase II ESA and it is recommended that a wetlands survey be performed for the corridor if it is needed.

- **Tributaries of Sugar Creek and Blackmanship Branch:** Tributaries of Sugar Creek and Blackmanship Branch run through the project corridor and wetland soils may be present immediately adjacent to the tributaries. Groundwater and surface runoff from proposed construction areas also discharge to the tributaries.

- **Private Drinking Water Supply Wells:** The Site is located in an urbanized area where public water is available to nearby parcels. Therefore, private drinking water supply wells are not expected to be present.

- **Physical Contact with Impacted Media:** Contact with site soil and fill could potentially occur during activities requiring excavation (e.g., utility repair, repaving, etc.). Visitors to the site could also potentially encounter impacted soil or fill in unpaved areas.

3 Phase II Investigations

The Phase II investigations were conducted at the seven (7) AOCs listed in *Section 2.4* on March 3-5, 2015. This section provides an overview of the methods used to investigate the AOCs and evaluate the data collected, describes data quality objectives, constituents of concern, laboratory methods used to analyze environmental samples, and field investigation methods.

3.1 Data Quality Objectives and Reasonable Confidence Protocols

Data quality objectives (DQO) are used to ensure that data is collected in a manner that permits it to be used to evaluate a site and support decisions based on those evaluations. Procedures used to ensure that the DQOs for the project were met include:

- Development of preliminary conceptual models used to guide the selection of appropriate constituents of concern and sampling locations;
- Selection of analytical methods with applicable detection limits;
- Use of pre-determined sample handling and custody procedures;
- Use of pre-determined data management and documentation procedures;
- Selection of sampling locations and constituents of concern appropriate to the potential release areas; and,
- Use of trip blanks, equipment blanks, duplicates, and laboratory matrix spikes (MS) for quality assurance/quality control (QA/QC).

3.2 Constituents of Concern

A list of constituents of concern to be investigated was developed for each AOC. The constituent list comprises those compounds most likely to be released based on knowledge of site operations and results of any previous investigation. The constituents of concern include:

- Volatile Organic Compounds (VOCs);
- Semi-volatile Organic Compounds (SVOCs); and,
- Metals.

The analytical methods presented in the following table were selected to identify and evaluate potential releases because they are capable of achieving analytical detection limits less than the baseline numeric screening levels applicable to the sampled media.

Constituent of Concern	Analytical Method
VOCs	Field screening using a photoionization detector (PID). Where suspected, VOCs were confirmed with analysis by EPA Method 8260.
SVOCs	Field screening using visual and olfactory cues. Where suspected, SVOCs were confirmed with analysis by EPA Method 8270.
Metals	EPA Method 6010 (arsenic, barium, cadmium, chromium, lead, nickel, selenium, and silver). EPA Method 7471 (mercury).

Pace Analytical Laboratory of Huntersville, North Carolina conducted the laboratory sample analyses. Pace Analytical Laboratory is a South Carolina-certified laboratory.

3.3 Phase II Investigation Procedures

The Phase II investigation can be broken down into the following general field methods used to develop lines of evidence for each AOC based on its initial conceptual model:

- AOC Inspections
- Soil screening (40 Locations)
- Soil sampling (34 locations)
- Temporary Monitoring well installation (6 locations)
- Groundwater sampling (7 locations)

Sample locations are depicted on *Figures 2 through 4*. The following subsections provide overviews of the site characterization methods identified above.

3.3.1 AOC Inspections

During planning, each AOC was inspected to determine whether a mechanism was present for the release of hazardous substances or petroleum products to the environment. During the inspections, specific attention was given to materials present, processes and raw material/waste management, evidence of releases (e.g. staining, residue, etc.), and migration pathways. Where the potential for releases of hazardous materials or petroleum products to the environment was determined to be non-existent or highly unlikely, no further action was recommended. Where it was determined that there was a reasonable potential for a release to have occurred, investigations targeting the area most likely to be impacted and analysis for AOC-specific constituents of concern were conducted.

3.3.2 Soil Sampling

Soil borings were advanced at 40 locations (SB-1 through SB-40) using direct-push technology which can be utilized in relatively tight fitting areas due to its small footprint and large areas due to its high mobility and minimal assembly and disassembly time. Direct push technology was chosen due to the need to be highly mobile and because this method is unobtrusive to retail operations.

For the purpose of this report, the following definitions will be used: surface soils (0-1 foot below ground surface, no letter designation) and subsurface soils (2-foot minimum depth, denoted as with an "A" identifier). Specific sample depth for each boring is located in *Table 1*. The locations of these soil borings are displayed on *Figures 2 through 4*.

Soil borings were drilled using a direct-push drilling rig. Soil samples were collected continuously from the ground surface to the terminus of the boring using a macrocore. A macrocore is a five-foot long stainless steel tube fitted with a polyethylene sleeve. This tube is pushed into the ground, filling the sleeve with an undisturbed core of subsurface soils.

Each soil sample was inspected by a field scientist from Fuss & O'Neill for physical evidence of contamination, such as staining or odors. Where VOCs were a potential constituent of concern, samples were also field screened using a PID.

Soil sampling intervals were selected to characterize the maximum concentrations of constituents of concern within a potential release area and confirm the extent of impacted soil. If visual inspection and field screening did not yield evidence of impacted soil, samples were selected for laboratory analysis from predetermined intervals based on the conceptual release model for each AOC.

3.3.3 Temporary Monitoring Well Installation & Groundwater Sampling

As part of this scope of work, six (6) temporary monitoring wells were installed utilizing Geoprobe® direct-push technology. The locations of the the temporary wells are displayed on *Figures 2 through 4*. Additionally, one (1) existing monitoring well on the Times Turn Around parcel (i.e., MW-6) was also sampled and submitted for laboratory analysis.

Groundwater samples from the temporary wells were collected with a discrete sampler developed for use with direct-push technology. The discrete sampler is a four-foot long stainless steel screen housed inside the direct push rods. Upon reaching the desired sampling interval, the direct push rods were pulled up four feet allowing the screen to be released at the desired sampling interval. SCDHEC Water Well Record forms are included as *Appendix B*.

After the discrete sampler screen was exposed to the water table, dedicated disposable polyethylene tubing containing a check valve was inserted into the direct push rods. This tubing was moved up and down forcing groundwater into the tubing until it reached the surface where it was collected in the appropriate bottles for laboratory analytical use. This sampling technique limits turbidity and helps prevent volatilization of potential VOCs.

Groundwater samples for laboratory analysis were collected from the temporary monitoring wells and the existing permanent monitoring well MW-6 on the Times Turn Around property using dedicated disposable polyethylene tubing. The water was slowly poured into the sample bottles to prevent aeration and to ensure the bottles are not overfilled. Once the samples were collected, they were placed in a cooler filled with ice and kept at approximately four degrees centigrade (4°C) throughout the operation. Samples were transported to the laboratory under proper Chain of Custody protocols.

After groundwater samples were collected from temporary monitoring wells, the borings were properly abandoned using a neat cement grout. The neat cement grout was injected through a tremie pipe set

approximately one foot above the total depth of the boring and filled from the bottom of the bore hole upward.

4 AOC Sample Collection & Analytical Results

This section presents the findings of the investigations conducted at each AOC and the analytical results. Samples were transported to Pace Analytical Services, Inc. for laboratory analyses. Samples were kept at approximately 4°C throughout the operation and during the transport to the laboratory. A chain of custody was maintained and documented during the shipping and handling process to ensure sample integrity. A copy of the chain of custody is included with the analytical report in *Appendix A*. Refer to *Figures 2 through 4* for locations of collected samples.

All samples were measured against EPA's Regional Screening Levels (RSLs) for residential and industrial soils and the EPAs National Primary Drinking Water Maximum Contaminant Levels (MCLs) for water samples.

4.1 Times Turn Around 10

4.1.1 Soil Sample Collection & Analysis

Soil Sample Collection

Ten (10) soil boings (SB-1 through SB-10) were installed to investigate the AOC associated with the Times Turn Around 10 site. Soil samples were collected using a macrocore. Each soil boring at the Times Turn Around AOC had a total depth of 10 feet below land surface (bls). Soils were screened with an organic vapor analyzer (OVA) PID for the presence of organic vapors. The highest OVA reading during field screening dictated the depth at which the subsurface sample was obtained.

Soil Analytical Results

Analysis for each collected sample was determined by known activities associated with the AOC discussed in *Section 2.4*. Soil samples at this AOC were analyzed for benzene, toluene, ethylbenzene, xylene, methyl-tert-butyl ether (MTBE), and naphthalene. *Table2* is a summary of soil analytical results for VOCs identified during this Phase II ESA. Only detected constituents are reported in the tables. Sample analysis results were compared to EPA's RSLs for residential and industrial soils.

The concentration of ethylbenzene from soil boring SB-9 exceeded the industrial RSL for soils.

4.1.2 Groundwater Collection & Analysis

Groundwater Sample Collection

Two (2) temporary monitoring wells (TW-1 and TW-2) were installed to investigate the AOC associated with the Times Turn Around 10 site. Groundwater samples were collected from each temporary well using a discrete sampler. Groundwater was also collected from existing monitoring well identified as MW-6 that was part of the previous onsite monitoring well network. Groundwater from monitoring well MW-6 was collected using a dedicated polyethylene bailer.

Groundwater Analytical Results

Groundwater samples were analyzed for benzene, toluene, ethylbenzene, xylene, MTBE, and naphthalene. Analysis for each collected sample was determined by known activities associated with the AOC discussed in *Section 1.4*.

Table3 is a summary of groundwater analytical results for VOCs identified during this Phase II ESA. Only detected constituents are reported. Sample analysis results were compared to EPA's MCL for drinking water. However, since no MCL's exist for MTBE and naphthalene, SCHDEC's Risk-Based Screening Level (RBSL) as used to screen the groundwater analytical results.

Concentrations of benzene and MTBE exceeded their respective EPA MCLs or SCDHEC RBSLs in samples TW-1 and TW-2. Concentrations of toluene, ethylbenzene and naphthalene from temporary well TW-1 exceeded the EPAs MCL or SCHDEC RBSLs for groundwater.

4.2 T&G Country Store

4.2.1 Soil Sample Collection & Analysis

Soil Sample Collection

Three (3) soil boings (SB-11 through SB-13) were installed to investigate the AOC associated with the T&G Country Store site. Soil samples were collected using a macrocore. Each soil boring at the T&G Country Store AOC had a total depth of 10 feet bls. Soils were screened with an OVA PID for the presence of organic vapors. The highest OVA reading during field screening dictated the depth at which the deeper sample was obtained.

Soil Analytical Results

Soil samples were analyzed for benzene, toluene, ethylbenzene, xylene, MTBE, and naphthalene. Analysis for each collected sample was determined by known activities associated with the AOC discussed in *Section 1.4*.

Table2 is a summary of soil analytical results for VOCs identified during this Phase II ESA. Only detected constituents are reported. Sample analysis results were compared to EPA's current RSLs for residential and industrial soil.

No analyzed constituents exceeded their respective screening levels in soil samples SB-11 through SB-13.

4.2.2 Groundwater Collection & Analysis

Groundwater Sample Collection

Fuss & O'Neill had anticipated utilizing an existing monitoring well network on the T&G Country Store site in order to assess the groundwater conditions on this site. However, the monitoring well network that had been previously associated with the T&G Country Store had been abandoned after the Phase I activities had been completed but before Phase II ESA activities could commence. Fuss & O'Neill personnel attempted to install two (2) temporary monitoring wells at two (2) distinct locations associated with the T&G Country Store AOC investigation. Groundwater was not encountered within 30 feet bls. Fuss & O'Neill terminated efforts to collect groundwater at the AOC. Based on our understanding of the proposed road improvements,

no construction activities will extend to a depth of 30 feet bls, thereby making groundwater collection efforts less relevant.

4.3 Handy Pantry 28 Food Mart

4.3.1 Soil Sample Collection & Analysis

Soil Sample Collection

Three (3) soil boings (SB-14 through SB-16) were installed to investigate the AOC associated with the Handy Pantry 28 Food Mart site. Soil samples were collected using a macrocore. Each soil boring at the Handy Pantry 28 Food Mart AOC had a total depth of 10 feet bls. Soils were screened with an organic vapor analyzer OVA PID for the presence of organic vapors. The highest OVA reading during field screening dictated the depth at which the deeper sample was obtained.

Soil Analytical Results

Soil samples were analyzed for benzene, toluene, ethylbenzene, xylene, MTBE, and naphthalene. Analysis for each collected sample was determined by known activities associated with the AOC discussed in *Section 1.4*.

Table2 is a summary of soil analytical results for VOCs identified during this Phase II ESA. Only detected constituents are reported. Sample analysis results were compared to EPA's current RSLs for residential and industrial soils.

No analyzed constituents exceeded their respective screening levels in soil samples SB-14 through SB-16.

4.3.2 Groundwater Collection & Analysis

Groundwater Sample Collection

Fuss & O'Neill had anticipated utilizing an existing monitoring well network on the Handy Pantry 28 Food Mart site in order to assess the groundwater conditions on this site. However, the monitoring well network that had been previously associated with the Handy Pantry 28 Food Mart had been abandoned before Phase II ESA activities could commence. Based on proposed road improvements and anticipated depth to groundwater, no attempts to were made to collect groundwater via temporary well installation during the investigation of the AOC associated with Handy Pantry 28 Food Mart. Refer to *Section 4.2.2* above.

4.4 Paving Equipment of the Carolinas

4.4.1 Soil Sample Collection & Analysis

Soil Sample Collection

Six (6) soil boings (SB-17 through SB-22) were installed to investigate the AOC associated with the Paving Equipment of the Carolinas site. Soil samples were collected using a macrocore. Each soil boring at the Paving Equipment of the Carolinas AOC had a total depth of 10 feet bls. Soils were screened with an OVA PID for the presence of organic vapors. Since no OVA readings were observed, three (3) of the six borings

(6) were selected and sampled at the terminus of the boring. Soil samples were collected from boring locations SB-18, SB-20, and SB-22.

Soil Analytical Results

Soil samples were analyzed for VOCs and SVOCs. Analysis for each collected sample was determined by known activities associated with the AOC discussed in *Section 1.4*.

Table2 is a summary of soil analytical results for VOCs and *Table 4* is a summary of soil analytical results for SVOCs identified during this Phase II ESA. Only detected constituents are reported. Sample analysis results were compared to EPA's residential and industrial RSLs.

No concentrations of SVOCs or VOCs in soil samples SB-18, SB-20, or SB-22 exceeded their respective EPA screening levels for soils.

4.4.2 Groundwater Collection & Analysis

Groundwater Sample Collection

Two (2) temporary monitoring wells (TW-3 and TW-4) were installed to investigate the AOC associated with the Paving Equipment of the Carolinas site. Groundwater samples were collected from each temporary well using a discrete sampler.

Groundwater Analytical Results

Groundwater samples were analyzed for VOCs and SVOCs. Analysis for each collected sample was determined by known activities associated with the AOC discussed in *Section 1.4*.

Table 3 is a summary of groundwater analytical results for VOCs and *Table 5* is a summary of groundwater analytical results for SVOCs identified during this Phase II ESA. Only detected constituents are reported. Sample analysis results were compared to EPA MCLs. However, since no MCL's exist for MTBE and naphthalene, SCHDEC's RBSL was used to screen the groundwater analytical results.

No concentrations of SVOCs or VOCs in groundwater samples TW-3 or TW-4 exceeded their respective EPA MCLs or SCDHEC RBSLs.

4.5 Partex / Eumeric Holdings

4.5.1 Soil Sample Collection & Analysis

Soil Sample Collection

Four (4) soil boings (SB-23/23A through SB-26/26A) were installed to investigate the AOC associated with the Partex / Eumeric Holdings site. Soil samples were collected using a macrocore. Each soil boring at the Partex / Eumeric Holdings AOC had a total depth of 10 feet bls. Surface soils (0-1 foot below ground surface, no letter designation) and subsurface soils (2-foot minimum depth, denoted as with an "A" identifier) were collected from this AOC. Soils were screened with an OVA PID for the presence of organic vapors.

Soil Analytical Results

Analysis for each collected sample was determined by known activities associated with the AOC discussed in *Section 1.4*. Each collected soil sample (SB-23/23A through SB-26/26A) was analyzed for metals. Soil samples SB-23 and SB-24 were also analyzed for VOCs and SVOCs. Since no measurable OVA readings were observed, two (2) of the six (6) borings were also sampled at the termination depth of the boring for VOCs and SVOCs.

Table 2 is a summary of soil analytical results for VOCs, *Table 4* is a summary of soil analytical results for SVOCs, and *Table 1* is a summary of analytical results for metals identified during this Phase II ESA. Only detected constituents are reported. Sample analysis results were compared to EPA's RSLs for residential and industrial soils.

Soil samples SB-23, SB-24, SB-25, SB-25A, SB-26 and SB-26A exceed the EPAs Residential RSL for arsenic in soils, but were less than the Industrial RSL. Naturally occurring background arsenic conditions are further discussed in *Section 4.6.1* below. Soil sample SB-24 exceeded the EPAs Residential RSL for benzo(a)pyrene but was less than the Industrial RSL.

4.5.2 Groundwater Collection & Analysis

Groundwater Sample Collection

Two (2) temporary monitoring wells (TW-5 and TW-6) were installed to investigate the AOC associated with the Partex / Eumeric Holdings site. Groundwater samples were collected from each temporary well using a discrete sampler.

Groundwater Analytical Results

Analysis for each collected sample was determined by known activities associated with the AOC discussed in *Section 1.4*.Groundwater samples were analyzed for metals, VOCs, and SVOCs.

Table 3 is a summary of groundwater analytical results for VOCs, *Table 5* is a summary of groundwater analytical results for SVOCs, and *Table 1* is a summary of analytical results for metals identified during this Phase II ESA. Only detected constituents are reported. Sample analysis results were compared to EPA's MCLs. In the absence of an MCL (e.g., silver), analyzed concentrations are compared to the respective SCDHEC's RBSLs.

Groundwater samples TW-5 and TW-6 exceeded EPA MCLs for barium, chromium, and lead. Groundwater sample TW-5 exceeded the EPA MCL for arsenic. Groundwater sample TW-6 exceeded the SCDHEC RBSL for silver. However, it should be noted that the collected groundwater samples were obtained from temporary, unfiltered wells. Installation of a permanent, traditional sand-pack wells may address the elevated metal concentrations seen in these groundwater samples collected from temporary well points.

4.6 Lords Armory

4.6.1 Soil Sample Collection & Analysis

Soil Sample Collection

Eight (8) soil boings (SB-27 through SB-34) were installed to investigate the AOC associated with the Lords Armory site. Soil samples were collected using a macrocore. Each soil boring at the Lords Armory AOC had a total depth of 10 feet bls. Soils were screened with an OVA PID for the presence of organic vapors. Two (2) of the eight (8) borings were sampled at the termination depth of the boring for VOCs. Additionally, two (2) samples from this AOC were submitted for laboratory analysis for metals. The collected metal concentrations served as background samples for metals concentrations to compare to the metals concentrations of the Parex/Eumeric Holdings AOC.

Soil Analytical Results

Analysis for each collected sample was determined by known activities associated with the AOC discussed in *Section 1.4*. Soil samples SB-33 and SB-34 were analyzed for metals. Additionally, soil samples SB-31 and SB-32 were analyzed for benzene, toluene, ethylbenzene, xylene, MTBE, and naphthalene.

Table2 is a summary of soil analytical results for VOCs and *Table 1* is a summary of analytical results for metals identified during this Phase II ESA. Only detected constituents are reported. Sample analysis results were compared to EPA's residential and industrial RSL.

Soil samples SB-33 and SB-34, which were meant to represent naturally occurring background soil conditions, were above EPA residential screening level for arsenic. However, arsenic is frequently found within South Carolina soils at naturally occurring concentrations that exceed the Residential and Industrial RSLs. According to a SCDHEC study (Canova, 1999), naturally occurring concentrations of arsenic have a mean concentration of 2 mg/kg within South Carolina's Coastal Plain, which exceeds the Residential RSL, and a mean concentration of 11.0 mg/kg within the Piedmont Section of South Carolina, which exceeds both the Residential and Industrial RSLs. The statewide average for arsenic within the soil samples collected for the SCDHEC/Canova study was 6.1 mg/kg, with collected background samples ranging from 0.23 mg/kg to 45.0 mg/kg arsenic. Therefore, it does not appear that the arsenic results obtained from the Partex/Eumeric Holdings or the Lords Armory AOCs represent anything outside normal, background elemental soil conditions in South Carolina.

Groundwater Sample Collection

Due to the anticipated depth of groundwater at this site and the anticipated direction of groundwater flow, groundwater was not collected from the Lord's Armory AOC during this Phase II ESA scope of work.

4.7 Millers Produce & Farm / Summerville Grocery

4.7.1 Soil Sample Collection & Analysis

Soil Sample Collection

Six (6) soil boings (SB-35 through SB-40) were installed to investigate the AOC associated with the Millers Produce & Farm / Summerville Grocery site. Soil samples were collected using a macrocore. Each soil boring at the Lords Armory AOC had a total depth of 10 feet bls. Soils were screened with an OVA PID for the presence of organic vapors. Since no OVA readings were observed, three (3) of the six (6) borings were sampled at the termination depth of the boring. Three (3) soil samples (i.e., SB-38, SB-39, SB-40) were submitted to the laboratory for this AOC.

Soil Analytical Results

Analysis for each collected sample was determined by known activities associated with the AOC discussed in *Section 1.4*. Soil samples SB-38 through SB-40 were analyzed for benzene, toluene, ethylbenzene, xylene, MTBE, and naphthalene.

Table2 is a summary of soil analytical results for VOCs identified during this Phase II ESA. Only detected constituents are reported. Sample analysis results were compared to EPA's residential and industrial RSLs.

No samples collected from this AOC had concentrations above EPA screening levels for soils.

Groundwater Sample Collection

Due to the anticipated depth of groundwater at this site and the anticipated direction of groundwater flow, groundwater was not collected from the Millers Produce & Farm / Summerville Grocery AOC during this Phase II ESA scope of work.

4.8 Quality Assurance/Quality control (QA/QC)

Care was taken throughout the sampling activities to avoid cross contamination. Direct push drilling equipment was steam cleaned between boreholes. Samples were kept at approximately four degrees centigrade (4ºC) throughout the operation and during transport to Pace Analytical Laboratory. Chain-of-custody forms were maintained and signed during the shipping and handling process to ensure sample integrity.

After the soil and groundwater samples were collected, the borings were properly abandoned using a neat cement grout.

5 Conclusions

Times Turn Around 10

High concentrations of benzene, toluene, ethylbenzene, MTBE, and naphthalene were found in groundwater samples collected along the eastern property boundary of the investigated area associated with Times Turn Around 10 AOC. One soil sample from the Times Turn Around 10 site (i.e., SB-9) also exceeded the Residential and Industrial RSL for ethylbezene.

T&G Country Store

No elevated levels of any constituents of concern were observed in soil or groundwatersamples collected from the T&G Country Store AOC during this Phase II ESA.

Handy Pantry 28 Food Mart

No elevated levels of any constituents of concern were observed in soil or groundwater samples collected from the Handy Pantry 28 Food Mart AOC during this investigation.

Paving Equipment of the Carolinas

No elevated levels of any constituents of concern were observed in samples of media collected from the Paving Equipment of the Carolinas AOC during this Phase II ESA.

Partex / Eumeric Holdings

Partex / Eumeric Holdings had the following samples exceed either the EPAs Regional Screening Level or SCHECS RBSL during this Phase II ESA.

- Soil samples SB-23, SB-24, SB-25, SB-25A, SB-26, and SB-26A exceeded the EPAs Residential RSL for arsenic. However, analyzed concentrations of arsenic appear to be consistent with naturally occurring background soil conditions found within South Carolina (Canova, 1999).
- Soil sample SB-24 exceeded EPAs Residential RSL for benzo(a)pyrene in soils, but was below the Industrial RSL.
- Groundwater sample TW-5 exceeded EPA MCLs in Groundwater arsenic, barium, total chromium, and lead. Groundwater samples TW-6 exceeded EPA MCLs for barium, total chromium, lead and SCDHECs groundwater RBSL for silver. It should be noted that the collected groundwater samples were obtained from temporary, unfiltered wells. Installation of a permanent, traditional sand-pack well may address the elevated metal concentrations seen in these groundwater samples collected from temporary well points. However, it is unknown whether the concentrations of metals are naturally occurring in groundwater, as conditions can vary greatly depending on the method of collecting the groundwater sample and subsurface geology.

Lords Armory

Lords had the following samples exceed the EPAs Residential RSL during this Phase II ESA.

- Soil samples SB-33 and SB-34 exceeded the EPAs RSL for arsenic in soils. However, as stated above, analyzed concentrations of arsenic appear to be consistent with naturally occurring background soil conditions found within South Carolina (Canova, 1999).

Millers Produce & Farm / Summerville Grocery

No elevated levels of analyzed constituents were observed in soil or groundwater samples collected from the Millers Produce & Farm / Summerville Grocery AOC during this Phase II ESA.

6 Qualifications

Reginald Butler and Christine Cafagna prepared this Phase II Environmental Site Assessment on behalf of STV, Inc. in conjunction with STV project #1149-004. Mr. Butler has 7 years of experience and Ms. Cafagna has 11 years of experience with environmental site assessments.

RE: Project: US Hwy 21/SC51 - 20120285.A12
Pace Project No.: 92240289

Dear Reggie Butler:
Enclosed are the analytical results for sample(s) received by the laboratory on March 09, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for
Nicole Benjamin

ANALYTICAL RESULTS

Project: US Hwy 21/SC51 - 20120285.A12
Pace Project No.: 92240289

Sample: SB-23 **Lab ID: 92240289020** Collected: 03/04/15 17:30 Received: 03/09/15 14:25 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: US Hwy 21/SC51 - 20120285.A12
Pace Project No.: 92240289

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether, Styrene, and Vinyl chloride.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A	Pace Analytical Services - Asheville
PASI-C	Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

1g	Passes inhouse limits.
2g	Recovery meets in-house limits.
3g	These comments apply to all compounds with percent recovery less than 70%.
4g	These comments apply to all compounds with pescent recovery less than 70%.
B	Analyte was detected in the associated method blank.
D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.
S0	Surrogate recovery outside laboratory control limits.
S1	Surrogate recovery outside laboratory control limits (confirmed by re-analysis).
S3	Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

Temporary Well Approval

D H E C

PROMOTE PROTECT PROSPER

South Carolina Department of Health
and Environmental Control

Temporary Monitoring Well Approval

Approval is hereby granted to:	Reginald Butler/Fuss & O'Neill
on behalf of:	Mike Barbee/SCDOT
Facility:	US 21 & SC 51 Corridor
County:	York

This approval is for the installation of 50 temporary groundwater-monitoring wells. The temporary wells are to be installed in the locations as illustrated on the submitted map and per the proposed construction details provided by your correspondence dated 2/23/15. The temporary wells are to be installed following all of the applicable requirements of R.61-71.

Please note that R.61-71 requires the following:

1. All wells shall be drilled, constructed, and abandoned by a South Carolina certified well driller per R.61-71.D.1.
2. A Water Well Record Form or other form provided or approved by the Department shall be completed and submitted to the Department within 30 days after well completion or abandonment unless the Department has approved another schedule. The form should contain the "as-built" construction details and all other information required by R.61-71.H.1.f
3. All analytical data and water levels obtained from each monitoring well shall be submitted to the Department within 30 days of receipt of laboratory results unless another schedule has been approved by the Department as required by R.61-71.H.1.d.
4. All temporary monitoring wells shall be abandoned within 5 days of borehole completion using appropriate methods as required by R.61-71.H.4.c.
5. If any of the information provided to the Department changes, Jonathan McInnis (803 896-4061, mcinnijg@dhec.sc.gov) shall be notified a minimum of twenty-four hours prior to well construction as required by R.61-71.H.1.a.

This approval is pursuant to the provisions of Section 44-55-40 of the 1976 South Carolina Code of Laws and R.61-71 of the South Carolina Well Standards and Regulations, dated April 26, 2002.

Date of Issuance: 2/24/15 **Approval #:** MW-10023

Re: Temporary Monitoring Well Approval Request received 2/23/15
York County Well ID: MW-10023

Dear Mr Barbee :

The South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed and approved the referenced temporary monitoring well approval request submitted 2/23/15. The original temporary monitoring well approval has been sent to Reginald Butler/Fuss & O'Neill, Inc. and a copy is enclosed for your records. The analytical results from the groundwater samples should be submitted to my attention on or before 4/24/15. Please note the following:

- Well construction and sampling derived waste including but not limited to drill cuttings, drilling fluids, and development/purge water should be managed properly and in compliance with applicable requirements. If containerized, each vessel should be clearly labeled with regards to contents, source, and date of activity.

- Monitoring wells are to yield groundwater samples representative of the zone monitored per R.61-71 H.1.c of the South Carolina Well Standards and Regulations (e.g. low flow sampling techniques are recommended for samples to be analyzed for metals to reduce induced turbidity).

- If this investigation is conducted as part of a potential real estate transaction, the potential purchaser may want to contact SCDHEC's Brownfields Program before this work is performed. The Brownfields Program offers a mechanism to avoid liability for contamination that may be found during this investigation. The investigation proposed may satisfy part or all of the required assessment if pre-approved by the Brownfields Program. The Brownfields Program may be reached at 1-866-576-3432.

If you have any questions, please contact me at (803) 898-0802.

Sincerely,

Jonathan G. McInnis, Program Manager

Limitations of Work Product

LIMITATIONS OF WORK PRODUCT

This document was prepared for the sole use of STV, Inc. the only intended beneficiaries of our work. Those who may use or rely upon the report and the services (hereafter "work product") performed by Fuss & O'Neill, Inc. and/or its subsidiaries or independent professional associates, subconsultants and subcontractors (collectively the "Consultant") expressly accept the work product upon the following specific conditions.

1. Consultant represents that it prepared the work product in accordance with the professional and industry standards prevailing at the time such services were rendered.

2. The work product may contain information that is time sensitive. The work product was prepared by Consultant subject to the particular scope limitations, budgetary and time constraints and business objectives of the Client which are detailed therein or in the contract between Consultant and Client. Changes in use, tenants, work practices, storage, Federal, state or local laws, rules or regulations may affect the work product.

3. The observations described and upon which the work product was based were made under the conditions stated therein. Any conclusions presented in the work product were based solely upon the services described therein, and not on scientific or engineering tasks or procedures beyond the scope of described services.

4. In preparing its work product, Consultant may have relied on certain information provided by state and local officials and information and representations made by other parties referenced therein, and on information contained in the files of state and/or local agencies made available at the time of the project. To the extent that such files which may affect the conclusions of the work product are missing, incomplete, inaccurate or not provided, Consultant is not responsible. Although there may have been some degree of overlap in the information provided by these various sources, Consultant did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this project. Consultant assumes no responsibility or liability to discover or determine any defects in such information which could result in failure to identify contamination or other defect in, at or near the site. Unless specifically stated in the work product, Consultant assumes no responsibility or liability for the accuracy of drawings and reports obtained, received or reviewed.

5. If the purpose of this project was to assess the physical characteristics of the subject site with respect to the presence in the environment of hazardous substances, waste or petroleum and chemical products and wastes as defined in the work product, unless otherwise noted, no specific attempt was made to check the compliance of present or past owners or operators of the subject site with Federal, state, or local laws and regulations, environmental or otherwise.

6. If water level readings have been made, these observations were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in water levels may occur due to variations in rainfall, passage of time and other factors

and such fluctuations may effect the conclusions and recommendations presented herein.

7. Except as noted in the work product, no quantitative laboratory testing was performed as part of the project. Where such analyses have been conducted by an outside laboratory, Consultant has relied upon the data provided, and unless otherwise described in the work product has not conducted an independent evaluation of the reliability of these tests.

8. If the conclusions and recommendations contained in the work product are based, in part, upon various types of chemical data, then the conclusions and recommendations are contingent upon the validity of such data. These data (if obtained) have been reviewed and interpretations made by Consultant. If indicated in the work product, some of these data may be preliminary or screening-level data and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time and other factors.

9. Chemical analyses may have been performed for specific parameters during the course of this project, as described in the work product. However, it should be noted that additional chemical constituents not included in the analyses conducted for the project may be present in soil, groundwater, surface water, sediments or building materials at the subject site.

10. Ownership and property interests of all documents, including reports, electronic media, drawings and specifications, prepared or furnished by Consultant pursuant to this project are subject to the terms and conditions specified in the contract between the Consultant and Client, whether or not the project is completed.

11. Unless otherwise specifically noted in the work product or a requirement of the contract between the Consultant and Client, any reuse, modification or disbursement of documents to third parties will be at the sole risk of the third party and without liability or legal exposure to Consultant.

12. In the event that any questions arise with respect to the scope or meaning of Consultant's work product, immediately contact Consultant for clarification, explanation or to update the work product. In addition, Consultant has the right to verify, at the party's expense, the accuracy of the information contained in the work product, as deemed necessary by Consultant, based upon the passage of time or other material change in conditions since conducting the work.

13. Any use of or reliance on the work product shall constitute acceptance of the terms hereof.

S&ME Project No. 1351-12-037

Dear Mr. Mastillone:

The purpose of this revised report is to provide pavement design recommendations to the design team for the subject Pennies for Progress project. The information contained in this report pertains to the pavements for the roadway realignment of US 21 and SC 51 widening project which begins at its intersection Springfield Pkwy, continues to the intersection of SC 51 and then follows SC 51 to the North and South Carolina border. Our services are being performed in general accordance with the approved scope of services in the Master Agreement for Subcontracted Technical Services between S&ME, Inc. and STV dated October 4, 2012 and First Amendment to Subcontract for Professional Services dated April 2014.

Sincerely,

S&ME, Inc.

1.0 Project Overview

The project generally consists of 2 mainline sections, the US 21 and SC 51 alignments and associated side streets. The following table presents how the project has been divided for the purposes of the pavement recommendations:

Table 1-1

Section	Route	Begin Sta.	End Sta.	No. Lanes	Curb & Gutter (y/n)	Pavement Design Life
1	US 21	10+00	60+00	4	Y	20*
2	US 21	60+00	135+00	4	Y	20
3	SC 51	295+62	340+00	4	Y	20
4	Residential Side Streets	Various	Various	2	Y	20
5	Old Nation/Old US 21 BUS	14+43	23+00	2	Y	20
6	Gold Hill Road	10+00	Old Nation Road	2	Y	20
7	Regent Parkway/Flint Hill Road	10+00/10+00	15+00/15+00	2	Y	20
8	Spring Hill Farm Road	Springhill Flex	SC 51	2	Y	20

* STV Recommended to keep design consistent through the project

Pavement designs are based on telephone conversations and e-mail correspondence between Stewart Laney, PE with S&ME and the STV design team as well as Jay Thompson, PE and Jason Johnston with SCDOT between February, 2015 and March, 2015. Revisions to include pavement designs for residential, industrial and collector side streets are based on correspondence between Mr. Laney and the STV design team and Mary Rawls, EI with S&ME and SCDOT between February and April 2017. The following documents have been provided and have incorporated into the pavement designs.

- SCDOT Pavement Design Guidelines dated July, 2008.
- E-mail from Sheri Williamson with SCDOT dated July 13, 2015.
- US-21 / SC-51 $AADT_{2012}$ = 34,700 $AADT_{2035}$ = 48,900
- 2012 & 2035 % Trucks = 8%
- 2012 and 2015 Peak Hour Volumes
- US 21 North Phase 1 & SC 51 Typical Sections, undated, provided July 2017.

Side streets are listed below based on local knowledge of the area and visual inspection. The streets are classified as residential, commercial, industrial, or collector. The Table below specifies these assigned classifications.

Table 1-2

Road	Classification
Lakeshore Road	Residential
Forest Drive	Residential
Baxter Lane	Residential
Old Nation/Old US 21 BUS	Collector
Flint Hill Road	Industrial
Gold Hill Road	Collector
Regent Parkway	Collector
Spring Hill Farm Road	Collector

2.0 Soil Conditions

Existing geotechnical conditions along the project alignment are based on the Preliminary Roadway Geotechnical Engineering Report (PRGER) prepared by S&ME which will be submitted at a later date. During this study, asphalt coring and subgrade evaluation was performed at seventeen (17) locations (C-1 through C-17) along the existing alignment. The subgrade was evaluated by Kessler Dynamic Cone Penetrometer Testing (KDCP) and by drilling the subgrade material to take measurements of the base material and visually classifying the subgrade soils. The KDCP is driven into the subgrade soils by dropping a Dual-Mass Hammer form a height of 22.6 inches. The depth of cone penetration is measures at selected penetration of hammer drop intervals and the soil shear strength is reported in terms of DCP index. The DCP index is used to estimate weighted average field California Bearing Ratio (CBR) values. The following table shows the testing that has been performed:

Table 2-1

Test ID	Route	Station (ft)	Offset (ft)	Depth (ft)	Asphalt Thickness (in.)	Concrete Thickness (in.)	Base Thickness (in.)	Base Type	Weighted Average CBR
C-1	Springfield Pkwy	12+98	23 RT	30	8.75	-	8.25	GABC	40
C-2	Springfield Pkwy	18+10	26 LT	30	9	-	4	GABC	35
C-3	Mercantile	11+03	14 LT	28.8	4	-	10	GABC	10
C-4	Lakeview Rd	13+40	6 RT	30	6.5	-	-	Sandy Silt	9
C-5	Amelea Dr	11+07	7 LT	30	1.5	-	3.5	GABC	17
C-6	Rain Forest Ct	11+52	5 LT	30	1.5	-	6	GABC	10
C-7	Lakeshore Dr	12+54	5 RT	30	3.5	-	3	GABC	12
C-8	Embassy Dr	10+89	3 LT	28.8	2	5.25	-	Clayey Silt	15
C-9	Old Nation Rd	15+10	5 RT	29.7	8	7.25	-	Concrete	3
C-10	Old Nation Rd	17+26	3 RT	30	7	-	5	GABC	
C-11	Baxter Ln	13+70	1 RT	30	-	-	9	GABC	15
C-12	Baxter Ln	12+02	1 LT	30	2	-	1.5	GABC	19
C-13	Central Carolinas Pkwy	11+11	8 RT	30	6	-	3	GABC	14
C-14	Regent Dr.	11+62	13 LT	30	2.5	-	7	GABC	9
C-15	Regent Pkwy	12+20	15 RT	30	4.25	-	3.5	GABC	16
C-16	Lakes Blvd	11+64	13 LT	30	5.25	-	1.5	GABC	13
C-17	Flint Hill Rd	12+01	7 LT	30	3.5	9.5	-	Concrete	

Based on the results of the testing program, pavement designs have considered a soaked laboratory CBR value of 4.0 (Soil Support Value (SSV) = 1.65).

3.0 Traffic Conditions

Traffic conditions are based on information provided by STV and SCDOT which have been detailed in Section 1.0. The project Road Groups have been provided by SCDOT and the Richland County Road Design Standards. The asphalt design procedures are based on the SCDOT Pavement Design Guidelines (2008). As shown in the table below, the following traffic conditions have been incorporated into our analyses:

Table 3-1

Alignment	SCDOT Road Group	Max 2015[1] ADT	Max 2035 ADT	% Trucks	Design Life[2] (years)	Lanes (per direction)	Directional Split
US 21	L	34,700	48,900	8	20	2	50
SC 51	L	34,700	48,900	8	20	2	50
Old Nation/Old US 21 BUS	D	17,900	26,586	8	20	1	50
Spring Hill Farm Road	D	12,300	17,700	5	20	1	50
Regent Parkway	D	10,667	15,053	5	20	1	50
Flint Hill Road	D	2,579	3,640	10	20	1	50
Gold Hill Road	D	11,000	15,000	5	20	1	50
Lakeshore Road/Residential	B	5,000	6,293	5	20	1	50

1 Based on 2012 and 2014 traffic volumes

Considering the SCODT pavement design procedures a required total number of 18 kip single axle load applications (ESALs) of **6,941,894** (target SN = 6.15) has been determined for both US 21 and SC 51 sections. The same was done for the side streets of US 21 and SC 51 and are listed below in Table 3-2.

Table 3-2

Alignment	Design ESALs	Target SN
Old Nation/Old US 21 BUS	2,092,298	5.2
Spring Hill Farm Road	1,213,184	5.0
Regent Parkway	751,136	4.5
Flint Hill Road	363,252	4.0
Gold Hill Road	1,219,576	5.0
Lakeshore Road/Residential	259,643	3.9

4.0 Existing Pavement Conditions

The existing pavements along the project are asphalt which have been overlaid, widened and patched multiple times. S&ME performed a visual condition survey of the existing pavements in general accordance with the FHWA "Distress Identification Manual for the Long-Term Pavement Performance Program (4th Edition)". S&ME has utilized the Coefficient Depreciation Method to evaluate the existing pavements for the project. Using this method, effective Structural Numbers (SN) have been determined for the existing pavements. The results of the visual condition survey and observations of the asphalt cores performed for the project were used to select depreciated layer coefficients for the overlay design sections.

S&ME has also performed a supplemental exploration of the existing pavements including a GPR survey and asphalt cores. The GPR survey was performed along the existing mainline travel lanes. GPR is an electromagnetic method that detects interfaces between subsurface materials with differing dielectric constants. The transmitter radiates electromagnetic waves into the earth from an antenna moving across the ground surface. Electromagnetic waves are reflected back to the receiver by interfaces between materials with differing dielectric constants. The intensity of the reflected signal is a function of the contrast in the dielectric constant at the interface, the conductivity of the material that the wave is traveling through, and the frequency of the signal. Asphalt cores were also performed to supplement the GPR survey and to help calibrate the GPR data. Core results and the plots of the GPR data are attached to this letter for you review. The core and GRP data have been used to determine the in-place asphalt and ABC thicknesses along the project alignment.

An example of the results of the visual condition is provided in the following table and the full survey can be found within the tables of Appendix II:

Table 4-1

	Severity			Low		

5.0 Pavement Design Recommendations

Based on the information provided to us and the results of our visual condition survey, we recommend two pavement design alternatives be considered for the US 21 / SC 51 project. Additionally, six designs have been recommended for the side streets. The alternatives for the mainline consist of a full depth new pavement section and an asphalt overlay section. Due to the severity of the distress observed at several of the existing intersections including Pinecrest Street, Lakeshore Drive and Goldhill Road, a significant amount of full depth patching will be required prior to overlaying the existing roadways at these locations. We recommend that the new pavement section be used to provide a full depth replacement of the existing pavements in these locations, existing shoulders and for all widened alignments. Plan sheets depicting the areas where removal and replacement of the existing travel lanes with the proposed full depth section are provided in the appendix.

Based on the information provided and a terminal serviceability (Pt) of 2.5, the following target structural numbers are recommended for the asphalt and subbase layer sections as shown in the table below. Appendix I also shows the all the calculations and assumptions made while following the AASHTO Interim Guide for Design of Pavement Structures, 1972 with SCDOT Pavement Design Guidelines.

New Pavement Section-Mainline US-21 & SC 51

Table 5-1

- HMA Intermediate B (Lifts > 1.5 inches)

In lieu of full depth patching/replacement of highly distressed areas, full depth reclamation could be considered. In order to maintain planned grades and to allow for the reclamation to extend through the existing asphalt, 2 inches of asphalt should be milled prior to reclamation.

When widening pavements, a reflective crack will eventually form at the joint between the new and old pavements. If full depth reclamation is performed, this joint and subsequent crack could be prevented by building out the widened section prior to reclamation.

We understand that SCDOT prefers not to allow high levels of traffic (like those measured here) on unpaved reclaimed surfaces for an extended period of time. Depending on the timing and sequence of construction, consideration should be given to placing a chip seal over the newly reclaimed base until paving can be performed.

6.0 Closing

The information provided in this letter is based on our understanding of the project, information given in this report and on our interpretation of the information provided. We have made our recommendations based on our experience with similar subsurface conditions and similar projects. These analyses apply to the specific project discussed in this report; therefore, any changes in the project information should be provided to us so we may review our conclusions and make any appropriate modifications.

This report has been prepared for the exclusive use of the client for specific application to the subject project and project site. It has been prepared in accordance with generally accepted geotechnical engineering practice for specific application to this project. The conclusions and recommendations contained in this report are based upon applicable standards of our practice in this geographic area at the time this report was prepared. No other warranty, expressed or implied, is made.

S&ME, Inc. appreciates the opportunity to assist you during this phase of the project. If you should have questions concerning this report, or if we may be of further assistance, please contact us.

Attention: Mr. Patrick Hamilton, PE
Program Manager – Pennies for Progress

Reference: **REPORT OF BACKFILL EVALUATION SERVICES**
U.S. Highway 21 Bypass Widening
Fort Mill, South Carolina
ESP Project No. E4-FX26.301
SC Certificate No. 5839

Dear Mr. Hamilton:

ESP Associates, Inc. (ESP) has completed backfill evaluation services for the proposed widening of U.S. Highway 21 Bypass in Fort Mill, South Carolina. This exploration was performed in general accordance with our Proposal No. E4-171081 (Revision #1), dated January 23, 2018. Authorization to proceed with this study was provided by written execution of our proposal by you on January 24, 2018.

ESP appreciates the opportunity to assist you during this phase of the project. If you should have any questions concerning this report, or if we may be of further assistance, please contact us at 803-802-2440.

Sincerely,

ESP Associates, Inc.

C. Tyler Wenner, GIT

1.0 INTRODUCTION

1.1 SITE AND PROJECT DESCRIPTION

Based on documents provided, and a meeting between York County representatives Mr. Patrick Hamilton and Mr. Ron Smith and Mr. Jake Sarna, PG of ESP, we understand that plans are to widen U.S. Highway 21 Bypass approximately from Springfield Parkway to State Road S-46-48 in Fort Mill, York County, South Carolina. It is our understanding that the planned widening will occur over recently installed 12 and 24-inch ductile iron waterlines which are located approximately 4 to 15 feet off the edge of the existing pavement. Plans show the waterlines were installed with a minimum of 4 feet of cover. York County desires to leave the existing waterlines in place as part of the proposed roadway widening. As such, South Carolina Department of Transportation (SCDOT) requested that the existing waterline backfill be evaluated to determine if it appears suitable for supporting the planned roadway.

1.2 PURPOSE OF SERVICES

The purpose of our services was to evaluate the general condition of the utility trench backfill covering the existing waterlines within the planned roadway widening. Our services consisted of evaluating the compaction, observing the character and continuity of the existing waterline backfill for its potential re-use, as well as its suitability to support the proposed pavement system. This report presents our findings, conclusions and recommendations for the backfill evaluation, as well as construction considerations for the proposed pavement system. This report also contains a brief description of the field and laboratory testing procedures performed for this study and a discussion of the soil conditions encountered at the site.

2.0 EXPLORATION PROCEDURES

2.1 FIELD

Four (4) test pits (TP-01 through TP-04) were excavated as shown on the attached "Test Pit Location Plan," Figure 1. The test pit locations were selected prior to fieldwork by an ESP representative using plans provided by York County Engineering, Google Earth Pro Imagery, and existing site features as location references. The test pits were performed approximately over the existing waterline and extended to depths up to approximately four feet below the existing ground surface, or to within approximately one foot of the waterline. Test pits were excavated by others utilizing a rubber-tired back hoe, and were backfilled upon completion of the excavations.

Field density tests were performed at approximate one foot intervals as the test pits were excavated. In conjunction with the field density testing a fiberglass probe rod was used to locate the presence or absence of the existing waterline within the test pit excavations. A brief description of the field testing procedures is included in the Appendix.

While in the field, a representative of the geotechnical engineer visually examined each test pit excavation to evaluate the type of soil encountered, soil plasticity, moisture condition, organic content, presence of lenses and seams, and colors. The results of the visual soil classifications for the test pits, as well as field test results, are presented on the individual "Test Pit Records," included in the Appendix. Similar soils were grouped into strata on the records. The strata lines represent approximate boundaries between the soil types; however, the actual transition between soil types encountered during the construction phase of this project may vary in both the horizontal and vertical directions.

2.2 LABORATORY

Select samples of the on-site soils obtained during the field testing program were tested in the laboratory. Tests performed included, Atterberg limits, grain size distribution, standard Proctor compaction, and organic content analysis. The limited testing program was designed to determine selected engineering properties of the on-site soils relative to their use for the project. The results of the soil tests performed for this study, along with a brief description of the laboratory procedures used, are presented in the Appendix.

In-situ moisture contents of the fill soils along the roadway range from 13.3 to 41.2 percent. Atterberg Limits tests (plastic limit and liquid limit) performed indicated that the fill soils have liquid limits ranging from 33 to 68 percent and plasticity indices (PI's) ranging from 8 to 41 percent with the high plasticity clays exhibiting the upper end of the range and the silty sand exhibiting the lower end of the range.

Standard Proctor compaction tests were performed on several bulk samples obtained from areas along the roadway alignments. Maximum dry density of the existing soils varied between 93.6 and 102.6 pounds per cubic foot (pcf) with optimum moisture content on the order of 22.0 and 26.1 percent. Organic content analysis performed on five samples indicates that the percent of organic matter in the existing fill soils ranging from 2 to 6 percent.

3.0 FINDINGS

3.1 SUBSURFACE CONDITIONS

The generalized subsurface conditions at the site are described below. For more detailed soil descriptions and stratifications at a particular test location, review the respective "Test Pit Record" included in the Appendix.

Surface: A topsoil layer approximately 3 to 5 inches thick was encountered at Test Locations TP-01 through TP-04. At Test Locations TP-01 and TP-02 excavations were conducted adjacent to the existing pavement, as such pavement and aggregate base course (ABC) stone thickness were noted at these locations. Pavement and ABC stone thickness at TP-01 was approximately 2 inches and 4 inches, respectively. At TP-02 two layers of pavement were noted, the top layer was approximately 6 inches in thickness, while the lower layer was approximately 8 inches in thickness. The ABC stone thickness at TP-02 was approximately 5 inches.

Fill: Underlying the topsoil in Test Locations TP-01 through TP-04 fill soils were encountered. The fill consists of sandy clays, clayey sands, and silty sands. The test pits were terminated in fill soils upon encountering the existing waterline.

ESP preformed in-place field density testing within the test pits at approximate one foot intervals. The tests indicate densities ranging from 78 to in excess of 100 percent of the soils maximum dry density based on a Standard Proctor moisture-density relationship. Ten of the twelve in-place field density tests indicated the in-situ moisture content to be approximately 1 to 19 percent wet of optimum moisture content with one test at approximately 8 percent dry of optimum moisture content. The results of the field density test preformed are included in the Appendix.

3.2 SUBSURFACE WATER

All test pits were dry at the time of excavation; however, subsurface water levels tend to fluctuate with seasonal and climatic variations, as well as with some types of construction operations. Therefore, water may be encountered during construction at depths not indicated during this study.

4.0 CONCLUSIONS AND RECOMMENDATIONS

4.1 GENERAL

Our conclusions and recommendations are based on the project information previously discussed and on the data obtained from the field and laboratory testing program. If the proposed construction locations are changed or significantly differ from those discussed, or if conditions are encountered during construction that differ from those encountered within the test pits, ESP requests the opportunity to review our recommendations based on the new information and make any necessary changes.

4.2 BACKFILL EVALUATION CONCULSIONS

Based upon the results of the field testing program and analysis indicates that the existing fill present over the installed waterlines does not currently meet the minimum compaction requirements per South Carolina Department of Transportation (SCDOT) Construction Manual. Existing backfill material is not suitable for re-use due to moisture conditions, plasticity, and organic content.

4.3 RECOMMENDATIONS

ESP recommends the following to remediate the existing backfill fill in preparation for the roadway widening:

- Undercut the existing fill to expose the top of the existing waterlines.
- Place a layer of #57 washed stone approximately 8 to 12 inches in thickness on top of the exposed waterlines.
- Place a layer of Mirafi HP270 (or approved equivalent) to provide separation between washed stone and replaced structural fill.
- Atop the geotextile place structural fill as described in Section 5.3 on this report.

5.0 CONSTRUCTION CONSIDERATIONS

5.1 TEMPORARY EXCAVATION STABILITY

Excavations greater than four feet in depth should be sloped or shored in accordance with local, state, and federal regulations, including OSHA "Construction Standard for Excavations" (29 CFR Part 1926.650-652). The contractor is usually solely responsible for site safety. This information is provided only as a service and under no circumstances should ESP be assumed to be responsible for construction site safety.

5.2 FILL MATERIAL AND PLACEMENT

All fill used for the backfill replacement operations should consist of a clean (free of organics and debris), low plasticity soil (Plasticity Index less than 30). The proposed fill should have a maximum dry density of at least 90 pounds per cubic foot as determined by a Standard Proctor compaction test, SC-T-29. All fill should be placed in loose lifts not exceeding 8 inches in thickness and compacted to a minimum of 95 percent of its Standard Proctor maximum dry density, with at least 100 percent achieved in the upper 12 inches. We recommend that field

density tests, including one-point Proctor verification tests, be performed on the fill as it is being placed at a frequency determined by an experienced geotechnical engineer to verify the compaction criteria.

6.0 LIMITATIONS OF REPORT

This report has been prepared in accordance with generally accepted geotechnical engineering practice with regard to the specific conditions and requirements of this site. The conclusions and recommendations contained in this report were based on the applicable standards of our practice in this geographic area at the time this report was prepared. No other warranty, expressed or implied, is made.

The analysis and recommendations submitted herein are based, in part, upon the data obtained from the test pit excavations. The nature and extent of variations between the test pits will not be known until construction is underway. If variations appear evident, then we request the opportunity to re-evaluate the recommendations of this report. In the event that any changes in the nature, design, or location of the construction planned, the conclusions and recommendations contained in this report will not be considered valid unless the changes are reviewed and conclusions modified or verified in writing by ESP.

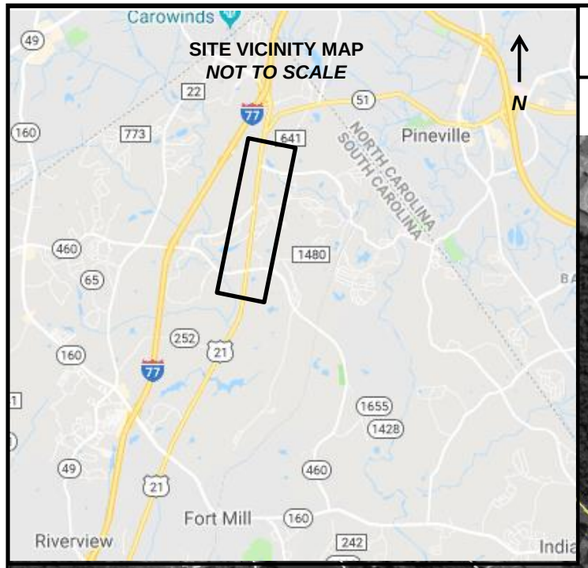
In order to verify that our recommendations are properly interpreted and implemented, we recommend that ESP be provided the opportunity to review the final plans and specifications. Any concerns observed will be brought to our client's attention in writing.

FIELD EXPLORATION PROCEDURES

Test Pits: Four (4) test pits were excavated at the approximate locations indicated on the Test Pit Location Plan, Figure 1. The test pits were excavated by a rubber-tired mounted backhoe. A representative of the geotechnical engineer was present to observe excavation of the test pits. The soil excavated from the test pit was classified by the a representative of the geotechnical engineer.

Drive Cylinder Density Test: Twelve (12) drive cylinder density tests were preformed at test locations indicated on the Test Pit Location Plan, Figure 1. Drive cylinder density tests were performed at approximate one foot depth increments as the test pits were excavated. The tests were performed in general accordance with ASTM D2937-10.

LABORATORY PROCEDURES



Grain Size Test: Grain size tests were performed to determine the particle size and distribution of the samples tested in general conformance with ASTM D 422. The grain size distribution of soils coarser than a No. 200 sieve was determined by passing the samples through a set of nested sieves. The results are presented on the attached Grain Size Distribution Sheets.

Soil Plasticity Tests (Atterberg Limits Test): Select samples were identified for Atterberg Limits testing to determine the soil's plasticity characteristics and is determined in accordance with ASTM D 4318. The Plasticity Index (PI) is representative of this characteristic and is determined utilizing the Liquid Limit (LL) and the Plastic Limit (PL). The Liquid Limit is the moisture content at which the soil will flow as a heavy viscous fluid. The Plastic Limit is the moisture content at which the soil transitions between the plastic and semi-solid states. The data obtained is presented on the attached sheet.

Standard Proctor Compaction Test: Five (5) samples of the on-site soil were obtained from excavated soil to determine its suitability as fill material. Standard Proctor Compaction Tests (ASTM D 698) were performed on the soil samples to determine its compaction characteristics including maximum dry density and optimum moisture content. The test results are presented on the attached Moisture Density Relationship sheets.

Organic Content of Soils: **S**elect samples were identified for Organic Content of Soils testing to determine the percent of organic matter in the soil. The testing was performed in general accordance with ASTM D 2974.

Rock Hill, South Carolina 29730

Assessment date: January 14, 2022

Prepared by: David Speer, P.E.

Culvert @ Sta. 33+79 US 21

The culvert was constructed as part of SCDOT File No. 46.240 with a plans date December 19, 1940 at approximately Station 319+28.8. It is a 5'x5' single reinforced concrete box culvert with a length of approximately 132 feet with approximately 25 feet of fill above the culvert. The culvert details were not included in the project files on SCDOT's Plans Online. The assessment of the west end of the culvert is in a sump and is almost 100% submerged under water and soil. Only the head wall was visible during the site visit (see figure 1). The east end of the culvert was approximately 90% filled with water and soil. The inside of the culvert was inaccessible (see figure 2).

The visible concrete was competent and no signs of deterioration were present. Additionally, there were no cracks shown in the roadway above or any disturbances in the slopes above the culvert. This indicates that the culvert is intact and its structure has not been compromised. Based on these observations and the fact that the structure has been in place for many years with no disturbance in the roadway above, KCI recommends that the existing culvert be left in place and extended.

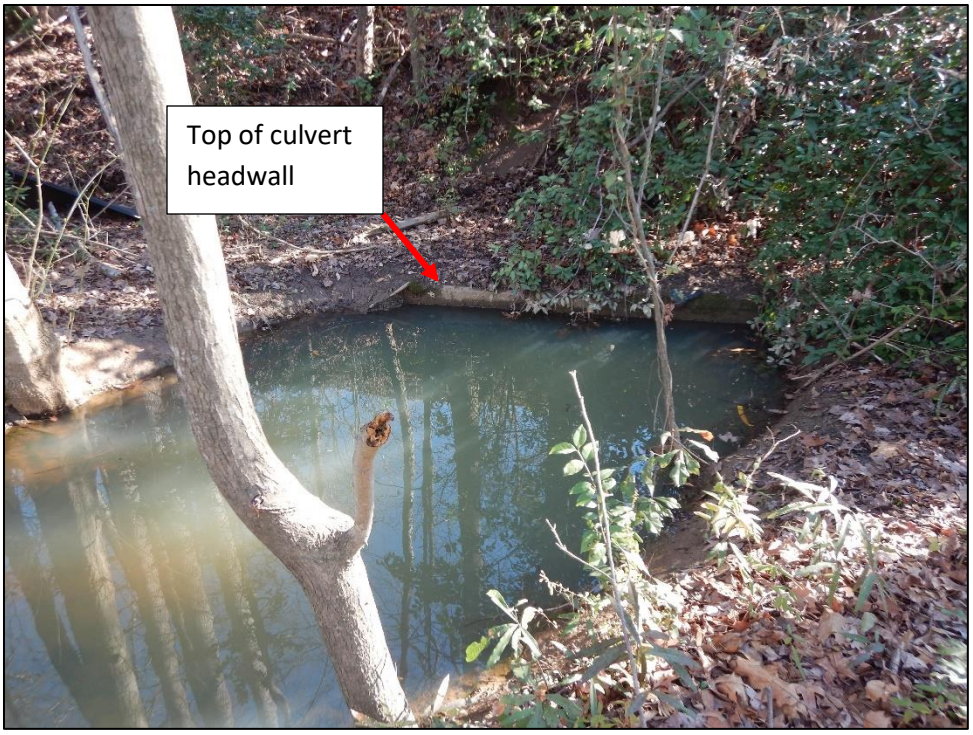

Figure 1: West end of culvert @ sta. 33+79

Figure 2: East end of culvert @ sta. 33+79

Culvert @ Sta. 41+06 US 21

The culvert was constructed as part of SCDOT File No. 46.240 with a plans date December 19, 1940, at approximately Station 326+57.1. It is a 5'x5' single reinforced concrete box culvert with a length of approximately 122 feet with approximately 17 feet of fill above the culvert. The culvert details were not included in the project files on SCDOT's Plans Online. The west end of the culvert did not show any signs of deterioration (see figure 3). On the interior of the culvert, the bottom of the top slab and inside face of the walls did not show any signs of deterioration or water intrusion. The east end of the culvert was inaccessible due to very steep slope and the presence of thick brush.

No signs of significant deterioration were observed during the structural assessment. The pavement and ground above and around the culvert did not show signs of cracking or settlement. Based on these observations, KCI recommends that the existing culvert be left in place and extended.

Figure 3:West End Culvert @ Sta. 41+06

Culvert @ Sta. 316+23 SC 51

The culvert was constructed as part of Federal Aid Project 216 (REOP) with a plans date July 18, 1927, at approximately Station 316+31. It is a 6'x6' single reinforced concrete box culvert with a length of approximately 30 feet with approximately 4 feet of fill above the culvert The original plans show a 6'x8' opening, however during a site visit conducted on May 30, 2019, it was determined that the culvert was a 6'x6' (see figures 4-6). The south end of the culvert did not show any signs of deterioration (see figure 7). Additionally, the north end of the culvert did not show any signs of deterioration (see figure 8). On the interior of the culvert, the bottom of the top slab and inside face of the walls did not show any signs of deterioration or water intrusion (see figure 8-9).

No signs of significant deterioration were observed during the structural assessment. The pavement and ground above and around the culvert did not show signs of cracking or settlement. Based on these observations, KCI recommends that the existing culvert be left in place and extended.

Figure 4: Measuring width of south end of culvert @ sta. 316+23

Figure 5: Measuring to top of soil at south end of culvert @ sta. 316+23

Figure 6: Measuring depth of soil at south end of culvert @ sta. 316+23

Figure 7: South end of culvert @ sta. 316+23

Figure 8: North end of culvert @ sta. 316+23

Figure 9: Inside of culvert @ sta. 316+23

CONCLUSION

Based on the condition of all three of the culverts during the site visits, KCI recommends that these culverts are suitable to be left in place and to have extensions added to the ends to facilitate the widening of the supported roadways.

DEPARTMENT OF THE ARMY
U.S. ARMY CORPS OF ENGINEERS, CHARLESTON DISTRICT
69A HAGOOD AVENUE
CHARLESTON, SC 29403-5107

November 23, 2021

Regulatory Division

Mr. Sean Connolly
South Carolina Department of Transportation
955 Park Street
Columbia, South Carolina 29202
ConnollyMS@scdot.org

Dear Mr. Connolly:

This is in response to your request for a preliminary jurisdictional determination (PJD) that is part of an overall project known as SCDOT US 21& SC 51 Intersection Improvements in York County (SCDOT PIN 42332), **Area #1**. Based on information submitted to the U.S. Army Corps of Engineers (Corps) we have determined there may be waters of the United States, including wetlands on your parcel located at the following:

Project Number:	SAC-2015-00812
County:	York County
Project/Site Size:	183 acres
Latitude:	35.076988°
Longitude:	-80.932637°
Project/Site Location:	US 21 & SC 51 Intersection Improvements in York County, Area #1
Waters (Acreage/Linear Feet):	Total: 1,175 lf tributaries & 0.506 ac wetlands

A copy of the PJD form and the depictions, Area-1 Figure 5A-5E, titled "US 21 North Phase I and SC 51 York County, SC SCDOT PIN 42332 York County PFP3 Project # 11149-004 Approximated Waters of the U.S. and Wetlands Boundary Map" dated October 11, 2021, is enclosed. Please carefully read this form, then sign and return a copy to me at the following Stephen.A.Brumagin@usace.army.mil within 30 days from the date of this notification.

Please be advised a Department of the Army permit will be required for regulated work in all areas which may be waters of the United States, as indicated in this PJD. For purposes of computation of impacts, compensatory mitigation requirements, and other resource protection measures, a permit decision made on the basis of a PJD will treat all waters and wetlands, which would be affected in any way by the permitted activity on the site, as if they are jurisdictional waters of the United States. Should you desire an approved Corps determination, one will be issued upon request.

You are cautioned that work performed in areas which may be waters of the United States, as indicated in the PJD, without a Department of the Army permit could subject you to enforcement action.

The delineation included herein has been conducted to identify the location and extent of the aquatic resource boundaries and/or the jurisdictional status of aquatic resources for purposes of the Clean Water Act for the particular site identified in this request. This delineation and/or jurisdictional determination may not be valid for the Wetland Conservation Provisions of the Food Security Act of 1985, as amended. If you or your tenant are USDA program participants, or anticipate participation in USDA programs, you should discuss the applicability of a certified wetland determination with the local USDA service center, prior to starting work.

If you submit a permit application as a result of this PJD, include a copy of this letter and the depiction as part of the application. Not submitting the letter and depiction will cause a delay while we confirm a PJD was performed for the proposed permit project area. Note that some or all of these areas may be regulated by other state or local government entities, and you should contact the South Carolina Department of Health and Environmental Control, Bureau of Water, to determine the limits of their jurisdiction.

In all future correspondence, please refer to file number SAC-2015-00812. A copy of this letter is forwarded to State and/or Federal agencies for their information. If you have any questions, please contact me at (803) 253-3445, or by email at Stephen.A.Brumagin@usace.army.mil.

Sincerely,

Stephen A. Brumagin
Project Manager

X Office (Desk) Determination. Date: November 23, 2021
X Field Determination. Date(s): August 2, 2021

[1] Districts may establish timeframes for requester to return signed PJD forms. If the requester does not respond within the established time frame, the district may presume concurrence and no additional follow up is necessary prior to finalizing an action.

TABLE OF AQUATIC RESOURCES IN REVIEW AREA WHICH "MAY BE" SUBJECT TO REGULATORY JURISDICTION.

Site Number	Latitude (decimal degrees)	Longitude (decimal degrees)	Estimated amount of aquatic resource in review area (acreage and linear feet, if applicable)	Type of aquatic resource (i.e., wetland vs. non-wetland waters)	Geographic authority to which the aquatic resource "may be" subject (i.e., Section 404 or Section 10/404)
Non-wetland Water A	35.087959	-80.925706	392 feet	Non-wetland waters	Section 404
Non-wetland Water B	35.064674	-80.935632	12 feet	Non-wetland waters	Section 404
Non-wetland Water C	35.063728	-80.936619	434 feet	Non-wetland waters	Section 404
Non-wetland Water D	35.061556	-80.93688	259 feet	Non-wetland waters	Section 404
Non-wetland Water E	35.086392	-80.934445	78 feet	Non-wetland waters	Section 404
Wetland A	35.086709	-80.930377	0.114 acre	Wetland	Section 404
Wetland B	35.087488	-80.925539	0.001 acre	Wetland	Section 404
Wetland C	35.08801	-80.923097	0.044 acre	Wetland	Section 404
Wetland E	35.086436	-80.934311	0.014 acre	Wetland	Section 404
Wetland F	35.06181	-80.937576	0.222 acre	Wetland	Section 404
Wetland G	35.058751	-80.937869	0.111 acre	Wetland	Section 404

1) The Corps of Engineers believes that there may be jurisdictional aquatic resources in the review area, and the requestor of this PJD is hereby advised of his or her option to request and obtain an approved JD (AJD) for that review area based on an informed decision after having discussed the various types of JDs and their characteristics and circumstances when they may be appropriate.
2) In any circumstance where a permit applicant obtains an individual permit, or a Nationwide General Permit (NWP) or other general permit verification requiring "pre-construction notification" (PCN), or requests verification for a non-reporting NWP or other general permit, and the permit applicant has not requested an AJD for the activity, the permit applicant is hereby made aware that: (1) the permit applicant has elected to seek a permit authorization based on a PJD, which does not make an official determination of jurisdictional aquatic resources; (2) the applicant has the option to request an AJD before accepting the terms and conditions of the permit authorization, and that basing a permit authorization on an AJD could possibly result in less compensatory mitigation being required or different special conditions; (3) the applicant has the right to request an individual permit rather than accepting the terms and conditions of the NWP or other general permit authorization; (4) the applicant can accept a permit authorization and thereby agree to comply with all the terms and conditions of that permit, including whatever mitigation requirements the Corps has determined to be necessary; (5) undertaking any activity in reliance upon the subject permit authorization without requesting an AJD constitutes the applicant's acceptance of the use of the PJD; (6) accepting a permit authorization (e.g., signing a proffered individual permit) or undertaking any activity in reliance on any form of Corps permit authorization based on a PJD constitutes agreement that all aquatic resources in the review area affected in any way by that activity will be treated as jurisdictional, and waives any challenge to such jurisdiction in any administrative or judicial compliance or enforcement action, or in any administrative appeal or in any Federal court; and (7) whether the applicant elects to use either an AJD or a PJD, the.JD will be processed as soon as practicable. Further, an AJD, a proffered individual permit (and all terms and conditions contained therein), or individual permit denial can

[1] Districts may establish timeframes for requester to return signed PJD forms. If the requester does not respond within the established time frame, the district may presume concurrence and no additional follow up is necessary prior to finalizing an action.

be administratively appealed pursuant to 33 C.F.R. Part 331. If, during an administrative appeal, it becomes appropriate to make an official determination whether geographic jurisdiction exists over aquatic resources in the review area, or to provide an official delineation of jurisdictional aquatic resources in the review area, the Corps will provide an AJD to accomplish that result, as soon as is practicable. This PJD finds that there "may be" waters of the U.S. and/or that there "may be" navigable waters of the U.S. on the subject review area, and identifies all aquatic features in the review area that could be affected by the proposed activity, based on the following information:

SUPPORTING DATA. Data reviewed for PJD (check all that apply)

Checked items should be included in subject file. Appropriately reference sources below where indicated for all checked items:

NOTIFICATION OF ADMINISTRATIVE APPEAL OPTIONS AND PROCESS AND REQUEST FOR APPEAL

Applicant:	File Number:	Date:
Attached is:		See Section below
	INITIAL PROFFERED PERMIT (Standard Permit or Letter of permission)	A
	PROFFERED PERMIT (Standard Permit or Letter of permission)	B
	PERMIT DENIAL	C
	APPROVED JURISDICTIONAL DETERMINATION	D
	PRELIMINARY JURISDICTIONAL DETERMINATION	E

SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at http://usace.army.mil/inet/functions/cw/cecwo/reg or Corps regulations at 33 CFR Part 331.

A: INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- OBJECT: If you object to the permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this form and return the form to the district engineer. Your objections must be received by the district engineer within 60 days of the date of this notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your letter, the district engineer will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the district engineer will send you a proffered permit for your reconsideration, as indicated in Section B below.

B: PROFFERED PERMIT: You may accept or appeal the permit

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- APPEAL: If you choose to decline the proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

C: PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

D: APPROVED JURISDICTIONAL DETERMINATION: You may accept or appeal the approved JD or provide new information.

- ACCEPT: You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this notice, means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.
- APPEAL: If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the Division Engineer, South Atlantic Division, 60 Forsyth St, SW, Atlanta, GA 30308-8801. This form must be received by the Division Engineer within 60 days of the date of this notice.

E: PRELIMINARY JURISDICTIONAL DETERMINATION: You do not need to respond to the Corps regarding the preliminary JD. The Preliminary JD **is not appealable**. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps district for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this form to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record, the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the review officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

If you have questions regarding this decision and/or the appeal process you may contact the Corps biologist who signed the letter to which this notification is attached. The name and telephone number of this person is given at the end of the letter.	If you only have questions regarding the appeal process you may also contact: Mr. Philip A. Shannin Administrative Appeals Review Officer CESAD-PDS-O 60 Forsyth St, SW, Floor M9 Atlanta, GA 30308-8803 (404) 562-5136

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Engineers personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15 day notice of any site investigation, and will have the opportunity to participate in all site investigations.

_____ Signature of appellant or agent.	Date:	Telephone number:

DEPARTMENT OF THE ARMY
U.S. ARMY CORPS OF ENGINEERS, CHARLESTON DISTRICT

CHARLESTON, SC 29403-5107

November 23, 2021

Regulatory Division

Mr. Sean Connolly
South Carolina Department of Transportation
955 Park Street
Columbia, South Carolina 29202
ConnollyMS@scdot.org

Dear Mr. Connolly:

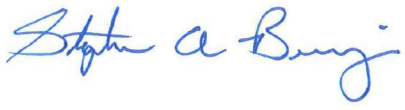
This is in response to your request for an Approved Jurisdictional Determination (AJD) (SAC-2015-00812) received in our office on June 9, 2021 and revised on October 18, 2021, for a 2-acre site known as SCDOT US 21& SC 51 Intersection Improvements in York County (SCDOT PIN 42332), **Area #2** which is located east of US 21 approximately 575 feet northeast of the intersection of US 21 and S-98 (Gold Hill Road) in Fort Mill, York County, South Carolina (Latitude: 35.076988°, Longitude: -80.932637°). An AJD is used to indicate the Corps has identified the presence or absence of wetlands and/or other aquatic resources on a site, including their accurate location(s) and boundaries, as well as their jurisdictional status pursuant to Section 404 of the Clean Water Act (CWA) (33 U.S.C. § 1344) and/or navigable waters of the United States pursuant to Section 10 of the Rivers and Harbors Act of 1899 (RHA) (33 U.S.C. § 403).

The site is shown on the attached depictions Area-2 Figure 5 and 5A, titled "US 21 North Phase I and SC 51 York County, SC SCDOT PIN 42332 York County PFP3 Project # 11149-004 Approximated Waters of the U.S. and Wetlands Boundary Map" dated October 11, 2021 prepared by STV. Based on an on-site inspection, a review of aerial photography, topographic maps, National Wetlands Inventory maps, soil survey information, and Wetland Determination Data Forms, we conclude the site, as shown on the referenced depictions, do not contain any aquatic resources subject to regulatory jurisdiction under Section 404 of the CWA or Section 10 of the RHA.

Attached is a form describing the basis of jurisdiction for the delineated area(s). Note that some or all of these areas may be regulated by other state or local government entities and you should contact the South Carolina Department of Health and Environmental Control, Bureau of Water, to determine the limits of their jurisdiction.

Attached is a form describing the basis of jurisdiction for the delineated area(s). Note that some or all of these areas may be regulated by other state or local government entities and you should contact the South Carolina Department of Health and Environmental Control, Bureau of Water, or Department of Ocean and Coastal Resource Management, to determine the limits of their jurisdiction.

Attached is a form describing the basis of jurisdiction for the delineated area(s). Note that a Department of the Army (DA) permit may be required for certain activities in the areas subject to regulatory jurisdiction of the Corps of Engineers, and these areas may be further subject to restrictions or requirements of other state or local government entities.



If you submit a permit application as a result of this AJD, include a copy of this letter and the depictions as part of the application. Not submitting the letter and depiction will cause a delay while we confirm an AJD was performed for the proposed permit project area. Note that some or all of these areas may be regulated by other state or local government entities, and you should contact the South Carolina Department of Health and Environmental Control, Bureau of Water, to determine the limits of their jurisdiction.

This AJD is valid for five (5) years from the date of this letter unless new information warrants revision before the expiration date. This AJD is an appealable action under the Corps of Engineers administrative appeal procedures defined at 33 CFR Part 331. The administrative appeal options, process and appeals request form is attached for your convenience and use.

This AJD was conducted pursuant to Corps of Engineers' regulatory authority to identify the limits of Corps of Engineers' jurisdiction for the particular site identified in this request. This AJD may not be valid for the wetland conservation provisions of the Food Security Act of 1985. If you or your tenant are USDA program participants, or anticipate participation in USDA programs, you should request a certified wetland determination from the local office of the Natural Resources Conservation Service, prior to starting work.

In all future correspondence, please refer to file number SAC-2015-00812, US 21& SC 51 Intersection Improvements in York County (SCDOT PIN 42332), **Area #2**. A copy of this letter is forwarded to State and/or Federal agencies for their information. If you have any questions, please contact me at (803) 253-3445, or by email at Stephen.A.Brumagin@usace.army.mil.

Sincerely,

Stephen A. Brumagin
Project Manager

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): November 23, 2021

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: JD Form 1 of 1; SAC-2015-00812 SCDOT US 21& SC 51 Intersection Improvements Project Area #2 in York County (SCDOT PIN 42332)

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: South Carolina County: York County City: Fort Mill

Center coordinates of site (lat/long in degree decimal format): Lat. 35.0769887699411 °, Long. -80.9326378928917 °.

Universal Transverse Mercator:

Name of nearest waterbody: Sugar creek and Steele Creek

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Catawba River

Name of watershed or Hydrologic Unit Code (HUC): 030501030103 Upper Sugar Creek & 030501030108 Steele Creek

☒ Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.

☐ Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

☒ Office (Desk) Determination. Date: November 23, 2021

☒ Field Determination. Date(s): August 2, 2021

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There **Are no** "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

☐ Waters subject to the ebb and flow of the tide.

☐ Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.
Explain: .

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There **Are no** "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [*Required*]

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]
      ☐ TNWs, including territorial seas
      ☐ Wetlands adjacent to TNWs
      ☐ Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
      ☐ Non-RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
      ☐ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
      ☐ Impoundments of jurisdictional waters
      ☐ Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
      Non-wetland waters: linear feet: width (ft) and/or acres.
      Wetlands: 0.017 acres.

   c. **Limits (boundaries) of jurisdiction** based on: **Pick List**
      Elevation of established OHWM (if known): .

2. **Non-regulated waters/wetlands (check if applicable):**[3]
   ☒ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional.
   Explain: **As was previously identified and confirmed by the Corps in the July 1, 2016 Approved Jurisdictional Determination (AJD) for this project, there is a feature identified as "Non-jurisdictional Water D 0.017 acre" within Area #2 of the SCDOT US 21 & SC 51 Phase I project in York County South Carolina. This feature is located east of**

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

US 21 approximately 575 feet northeast of the intersection of US 21 and S-98 (Gold Hill Road) in Fort Mill, York County, S.C.

In the previous AJD the consultant had identified this feature as an unmaintained stormwater feature that may have some hydrophytic vegetation and saturated soils. However, on further investigation by the Corps with a field view on November 17, 2015, the Corps confirmed the presence of a concrete block wall that is located on the north site of the feature with the presence of sediment deposits and debris within the feature. At that time, it was observed there were limited hydrophytic plants present with areas of unvegetated sediment deposits and the substrate was saturated.

On August 2, 2021, the situation is very similar to the previous field view, however the accumulated sediments were moist in some location within the feature and other areas were quite dry. A sample of the accumulated sediments had some stratification of soil with matrix color of 10 YR 4/3 with s few remnant faint redox concentration only in a few select areas that had the most soil moisture. There may be more hydrophytic vegetation present than during the previous field view, but these were predominantly plants one would expect to move into a disturbed area such as Sweet Gum, Poison Ivy and Green Ash. Also, the condition of the concrete wall has not changed dramatically since the previous field view, other than some deterioration from age. As was previously determined by the Corps, this wall may have been constructed in the past as some type of low retaining wall with the idea of keeping storm water flows away from the placed fill. Due to development within the immediate area and within the drainage area above this feature, it appears, due to limited soil moisture, that some of the flows that formerly went through this feature have been diverted or intercepted and this area did not exhibit characteristics of tributaries beyond what would be expected for areas that receive stormwater directly related to precipitation events.

Based upon this field view, the feature identified in this delineation as Non-Jurisdictional Water D 0.017 acre, may be some type of un-maintained stormwater conveyance feature that does not meet the criteria for consideration as a wetland, nor does it have flow characteristics that meet the definition of a tributary. Therefore, the Corps has determined that this feature is not subject to jurisdiction under the Clean Water Act.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW
Identify TNW: .

Summarize rationale supporting determination: .

2. Wetland adjacent to TNW
Summarize rationale supporting conclusion that wetland is "adjacent": .

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:
Watershed size: **Pick List**
Drainage area: **Pick List**
Average annual rainfall: inches
Average annual snowfall: inches

(ii) Physical Characteristics:
(a) Relationship with TNW:
☐ Tributary flows directly into TNW.
☐ Tributary flows through **Pick List** tributaries before entering TNW.

Project waters are **Pick List** river miles from TNW.
Project waters are **Pick List** river miles from RPW.
Project waters are **Pick List** aerial (straight) miles from TNW.
Project waters are **Pick List** aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain: .

Identify flow route to TNW[5]: .
Tributary stream order, if known: .

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☐ Natural
☐ Artificial (man-made). Explain: .
☐ Manipulated (man-altered). Explain: .

Tributary properties with respect to top of bank (estimate):
Average width: feet
Average depth: feet
Average side slopes: **Pick List.**

Primary tributary substrate composition (check all that apply):

☐ Silts	☐ Sands	☐ Concrete
☐ Cobbles	☐ Gravel	☐ Muck
☐ Bedrock	☐ Vegetation. Type/% cover:	
☐ Other. Explain: .		

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: .
Presence of run/riffle/pool complexes. Explain: .
Tributary geometry: **Pick List**
Tributary gradient (approximate average slope): %

(c) Flow:
Tributary provides for: **Pick List**
Estimate average number of flow events in review area/year: **Pick List**
Describe flow regime: .
Other information on duration and volume: .

Surface flow is: **Pick List.** Characteristics: .

Subsurface flow: **Pick List**. Explain findings: .
☐ Dye (or other) test performed: .

Tributary has (check all that apply):
☐ Bed and banks
☐ OHWM[6] (check all indicators that apply):

☐ clear, natural line impressed on the bank	☐ the presence of litter and debris
☐ changes in the character of soil	☐ destruction of terrestrial vegetation
☐ shelving	☐ the presence of wrack line
☐ vegetation matted down, bent, or absent	☐ sediment sorting
☐ leaf litter disturbed or washed away	☐ scour
☐ sediment deposition	☐ multiple observed or predicted flow events
☐ water staining	☐ abrupt change in plant community
☐ other (list):	

☐ Discontinuous OHWM.[7] Explain: .

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

☐ High Tide Line indicated by:	☐ Mean High Water Mark indicated by:
☐ oil or scum line along shore objects	☐ survey to available datum;
☐ fine shell or debris deposits (foreshore)	☐ physical markings;
☐ physical markings/characteristics	☐ vegetation lines/changes in vegetation types.
☐ tidal gauges	
☐ other (list):	

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain: .
Identify specific pollutants, if known: .

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- ☐ Riparian corridor. Characteristics (type, average width): .
- ☐ Wetland fringe. Characteristics: .
- ☐ Habitat for:
  - ☐ Federally Listed species. Explain findings: .
  - ☐ Fish/spawn areas. Explain findings: .
  - ☐ Other environmentally-sensitive species. Explain findings: .
  - ☐ Aquatic/wildlife diversity. Explain findings: .

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:

Properties:

Wetland size: acres

Wetland type. Explain: .

Wetland quality. Explain: .

Project wetlands cross or serve as state boundaries. Explain: .

(b) General Flow Relationship with Non-TNW:

Flow is: **Pick List**. Explain: .

Surface flow is**: Pick List**

Characteristics: .

Subsurface flow: **Pick List**. Explain findings: .

- ☐ Dye (or other) test performed: .

(c) Wetland Adjacency Determination with Non-TNW:

- ☐ Directly abutting
- ☐ Not directly abutting
  - ☐ Discrete wetland hydrologic connection. Explain: .
  - ☐ Ecological connection. Explain: .
  - ☐ Separated by berm/barrier. Explain: .

(d) Proximity (Relationship) to TNW

Project wetlands are **Pick List** river miles from TNW.

Project waters are **Pick List** aerial (straight) miles from TNW.

Flow is from: **Pick List.**

Estimate approximate location of wetland as within the **Pick List** floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: .

Identify specific pollutants, if known: .

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☐ Riparian buffer. Characteristics (type, average width): .
- ☐ Vegetation type/percent cover. Explain: .
- ☐ Habitat for:
  - ☐ Federally Listed species. Explain findings: .
  - ☐ Fish/spawn areas. Explain findings: .
  - ☐ Other environmentally-sensitive species. Explain findings: .
  - ☐ Aquatic/wildlife diversity. Explain findings: .

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: **Pick List**

Approximately ( ) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)

Summarize overall biological, chemical and physical functions being performed: .

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: .

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: .

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: .

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: linear feet width (ft), Or, acres.
   - ☐ Wetlands adjacent to TNWs: acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: .
   - ☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: .

Provide estimates for jurisdictional waters in the review area (check all that apply):
☐ Tributary waters: linear feet width (ft).
☐ Other non-wetland waters: acres.
Identify type(s) of waters: .

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional waters within the review area (check all that apply):
☐ Tributary waters: linear feet width (ft).
☐ Other non-wetland waters: acres.
Identify type(s) of waters: .

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: .

☐ Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: .

Provide acreage estimates for jurisdictional wetlands in the review area: acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetlands in the review area: acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetlands in the review area: acres.

7. **Impoundments of jurisdictional waters.[9]**
As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
☐ Demonstrate that impoundment was created from "waters of the U.S.," or
☐ Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
☐ Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]
☐ which are or could be used by interstate or foreign travelers for recreational or other purposes.
☐ from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
☐ which are or could be used for industrial purposes by industries in interstate commerce.
☐ Interstate isolated waters. Explain: .
☐ Other factors. Explain: .

Identify water body and summarize rationale supporting determination: .

---

[8] See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

Provide estimates for jurisdictional waters in the review area (check all that apply):
☐ Tributary waters: linear feet width (ft).
☐ Other non-wetland waters: acres.
Identify type(s) of waters: .
☐ Wetlands: acres.

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):
☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
☐ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
☐ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: .
☒ Other: (explain, if not covered above): **As was described above in Section B.2, the identified feature, Non-Jurisdictional Water D 0.017 acre, has been determined by the Corps to be a linear storm water conveyance features that does not meet the criteria of wetlands nor does it exhibit characteristics of tributary. Therefore, this feature is not subject to jurisdiction under the Clean Water Act.**

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):
☐ Non-wetland waters (i.e., rivers, streams): linear feet width (ft).
☐ Lakes/ponds: acres.
☐ Other non-wetland waters: acres. List type of aquatic resource: .
☐ Wetlands: acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):
☐ Non-wetland waters (i.e., rivers, streams): linear feet, width (ft).
☐ Lakes/ponds: acres.
☐ Other non-wetland waters: acres. List type of aquatic resource: .
☐ Wetlands: acres.

SECTION IV: DATA SOURCES.

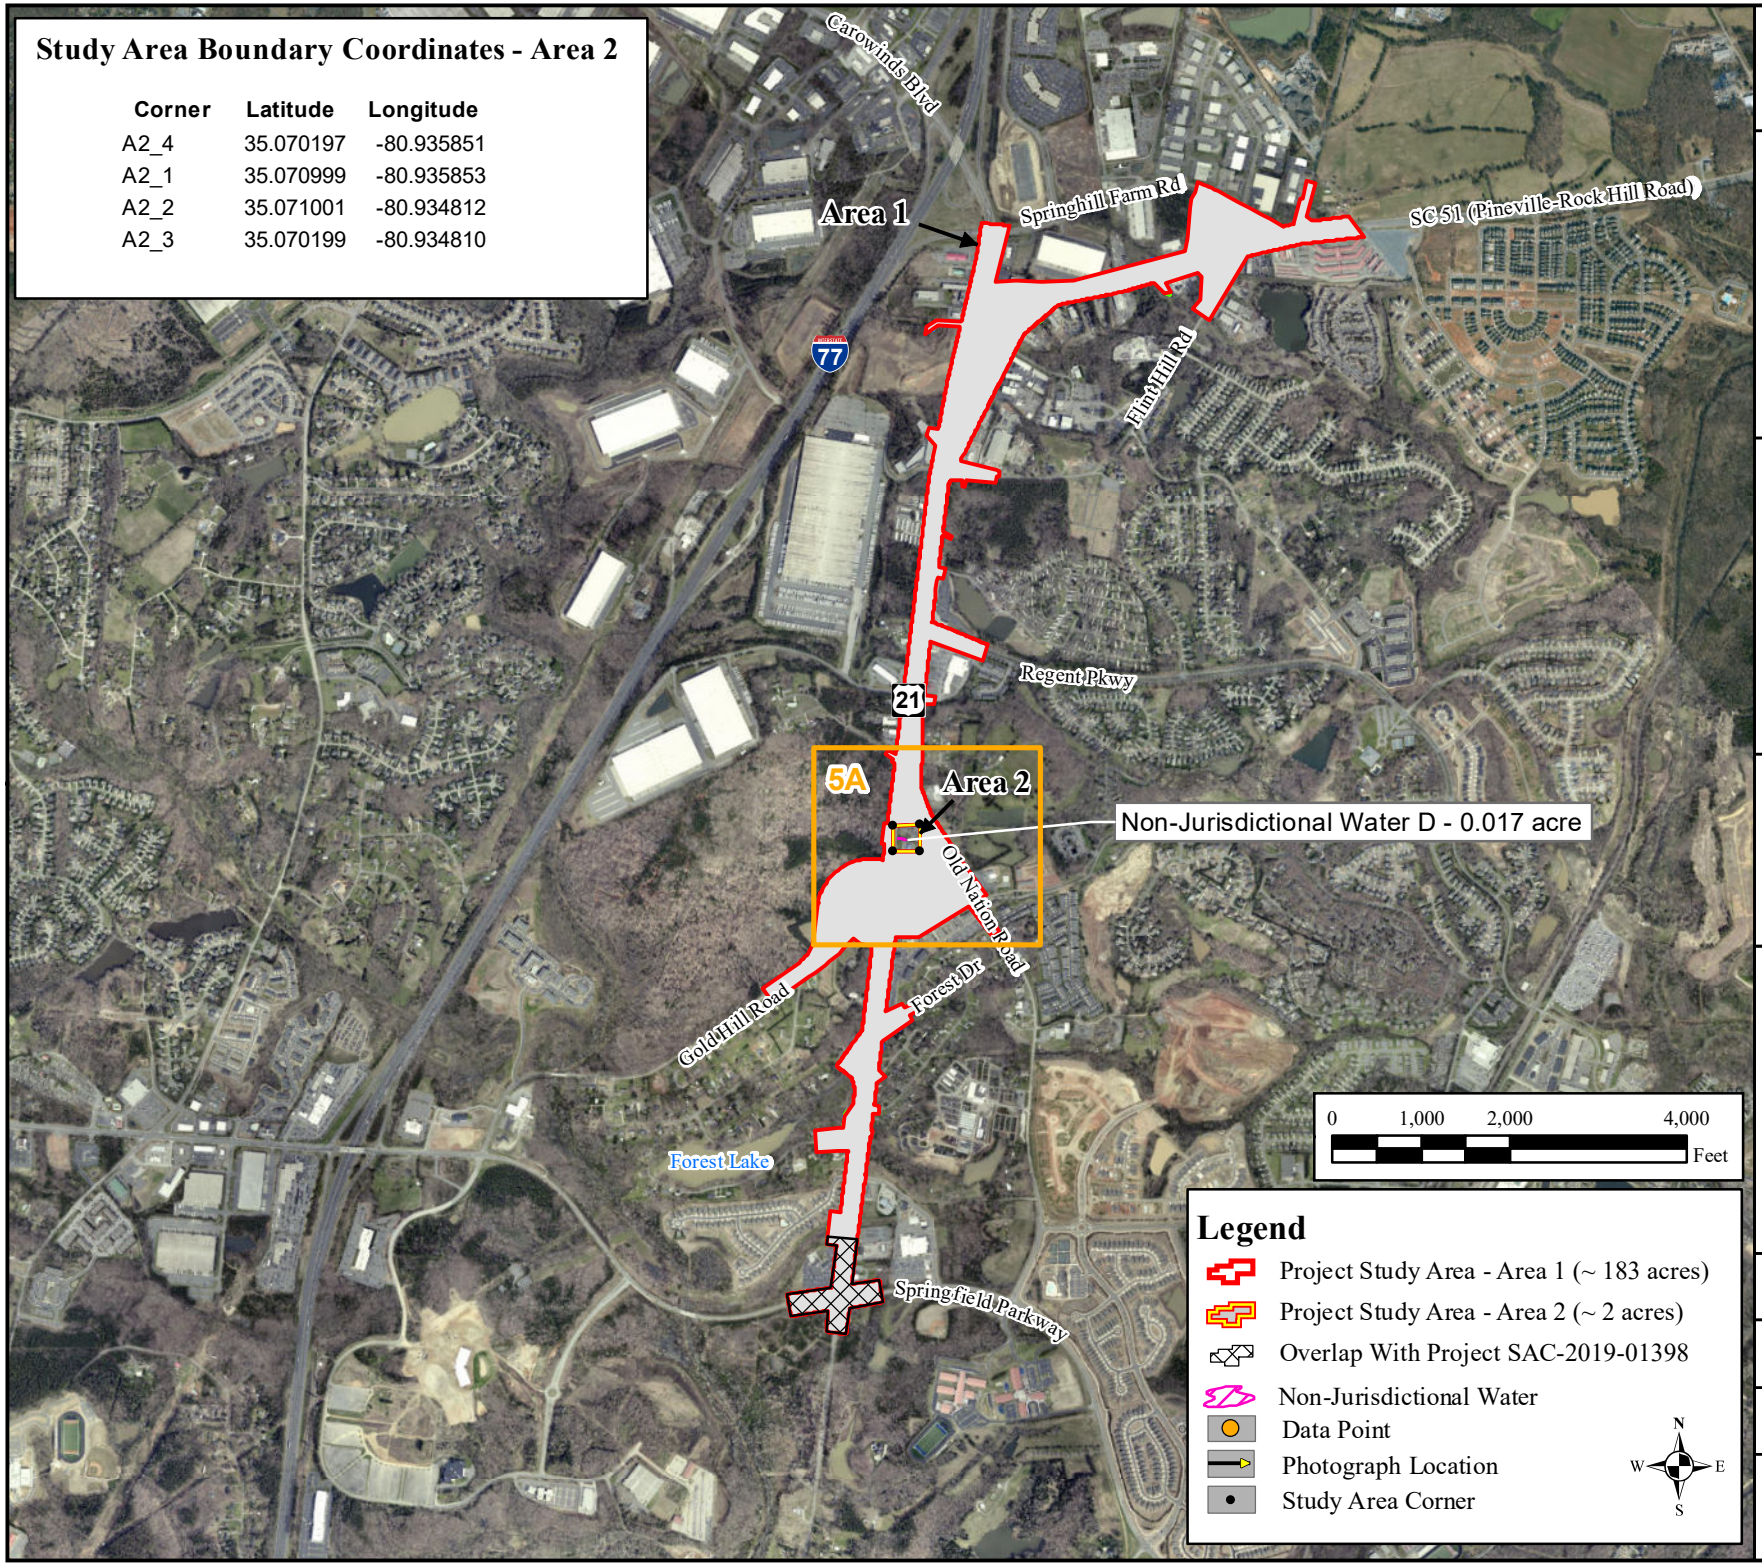
A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):
☒ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: depictions Area-2 Figure 5 and 5A, titled "US 21 North Phase I and SC 51 York County, SC SCDOT PIN 42332 York County PFP3 Project # 11149-004 Approximated Waters of the U.S. and Wetlands Boundary Map" dated October 11, 2021 prepared by STV.
☒ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
☒ Office concurs with data sheets/delineation report. The Corps agrees with the boundaries features represented in the drawings and based on the information provided
☐ Office does not concur with data sheets/delineation report.
☐ Data sheets prepared by the Corps: .
☒ Corps navigable waters' study: Charleston District Navigability Study, 1977.
☒ U.S. Geological Survey Hydrologic Atlas: HA 730-G, 1990.
☐ USGS NHD data.
☒ USGS 8 and 12 digit HUC maps. 030501030103 Upper Sugar Creek, 030501030108 Steele Creek and 03050103 Lower Catawba River.
☒ U.S. Geological Survey map(s). Cite scale & quad name: 1:24,000 Fort Mill, SC quadrangle.

Citation: As provided by the Consultant in depictions, US 21 North Phase I and SC 51 York County, SC SCDOT PIN 42332 York County PFP3 Project # 11149-004, NRCS Soil Series Map Figures 3, 3B: Cecil, Mecklenburg-Wynott, Pacolet & Wynott-Winnsboro series.
☒ National wetlands inventory map(s). Cite name: As provided by Consultant in depiction US 21 North Phase I and SC 51 York County, SC SCDOT PIN 42332 York County PFP3 Project # 11149-004 National Wetland Inventory Map Figure 4 and the Corps Reg Viewer: Uplands.
☐ State/Local wetland inventory map(s): .
☐ FEMA/FIRM maps: .
☐ 100-year Floodplain Elevation is: (National Geodectic Vertical Datum of 1929)
☒ Photographs: ☒ Aerial (Name & Date): As provided by the consultant in the JD request.

or ☒ Other (Name & Date): As provided by the consultant in the JD request.

☒ Previous determination(s). File no. and date of response letter: SAC 2015-00812 AJD dated July 1, 2016.

☐ Applicable/supporting case law: .



☐ Applicable/supporting scientific literature: .

☒ Other information (please specify): field view on August 2, 2021.

B. ADDITIONAL COMMENTS TO SUPPORT JD: As was described above in Section B.2, the identified feature, Non-Jurisdictional Water D 0.017 acre, has been determined by the Corps to be a linear storm water conveyance features that does not meet the criteria of wetlands nor does it exhibit characteristics of tributary. Therefore, this feature is not subject to jurisdiction under the Clean Water Act.

NOTIFICATION OF ADMINISTRATIVE APPEAL OPTIONS AND PROCESS AND REQUEST FOR APPEAL

Applicant:	File Number:	Date:
Attached is:		See Section below
	INITIAL PROFFERED PERMIT (Standard Permit or Letter of permission)	A
	PROFFERED PERMIT (Standard Permit or Letter of permission)	B
	PERMIT DENIAL	C
	APPROVED JURISDICTIONAL DETERMINATION	D
	PRELIMINARY JURISDICTIONAL DETERMINATION	E

SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at http://usace.army.mil/inet/functions/cw/cecwo/reg or Corps regulations at 33 CFR Part 331.

A: INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- OBJECT: If you object to the permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this form and return the form to the district engineer. Your objections must be received by the district engineer within 60 days of the date of this notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your letter, the district engineer will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the district engineer will send you a proffered permit for your reconsideration, as indicated in Section B below.

B: PROFFERED PERMIT: You may accept or appeal the permit

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- APPEAL: If you choose to decline the proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

C: PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

D: APPROVED JURISDICTIONAL DETERMINATION: You may accept or appeal the approved JD or provide new information.

- ACCEPT: You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this notice, means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.
- APPEAL: If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the Division Engineer, South Atlantic Division, 60 Forsyth St, SW, Atlanta, GA 30308-8801. This form must be received by the Division Engineer within 60 days of the date of this notice.

E: PRELIMINARY JURISDICTIONAL DETERMINATION: You do not need to respond to the Corps regarding the preliminary JD. The Preliminary JD **is not appealable**. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps district for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this form to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record, the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the review officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

If you have questions regarding this decision and/or the appeal process you may contact the Corps biologist who signed the letter to which this notification is attached. The name and telephone number of this person is given at the end of the letter.	If you only have questions regarding the appeal process you may also contact: Mr. Philip A. Shannin Administrative Appeals Review Officer CESAD-PDS-O 60 Forsyth St, SW, Floor M9 Atlanta, GA 30308-8803 (404) 562-5136

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Engineers personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15 day notice of any site investigation, and will have the opportunity to participate in all site investigations.

_____ Signature of appellant or agent.	Date:	Telephone number:

galloway.ja@dot.state.sc.us

Dear Ms. Galloway:

Enclosed is your Department of the Army Permit SAC-2015-00812 for the project known as SCDOT US 21& SC 51 Intersection in York County (SCDOT PIN 42332). It authorizes you to perform the work specified in the attached drawings. This permit is issued under provision of Federal laws for the protection and preservation of waters of the United States.

Please notify this office promptly, in writing or via email to Jeremy M. Kinney, Project Manager, when you start and complete work. Be aware a special condition is included in this permit requiring a copy of the permit and drawings be available at the work site during the entire time of construction.

FOR THE CHIEF, REGULATORY DIVISION Sincerely,

Ronnie Smith

Ronnie D. Smith
Chief, Northeast Branch

DA Permit SAC-2015-00812
Notice of Commencement or Completion

DEPARTMENT OF THE ARMY PERMIT

Permittee: **SC Department of Transportation** **955 Park Street**
C/O Mr. Sean Connolly **Columbia, South Carolina 29201**

Permit No: **SAC-2015-00812**

Issuing Office: **CHARLESTON DISTRICT**

NOTE: The term "you" and its derivatives, as used in this permit, means the permittee or any future transferee. The term "this office" refers to the appropriate district or division office of the Corps of Engineers having jurisdiction over the permitted activity or the appropriate official of that office acting under the authority of the commanding officer.

You are authorized to perform work in accordance with the terms and conditions specified below.

Project Description:
The authorized work consists of widening of approximately 5.7 miles of roadway including US 21 from the intersection of US 21 and SC 160/North White Street to the intersection of US 21 and SC 51 and approximately one mile of SC 51 to the state boundary to improve traffic safety, traffic efficiency to meet current design criteria and to improve stormwater drainage. This project will include impacts to a total of 1,378 linear feet of tributaries and 0.984 acres of wetland areas. Specifically, this project will include placement of fill and piping in 1,019 linear feet of tributaries, placement of rock armor rip rap in 359 linear feet of tributaries, placement of fill (including cut/fill) in 0.832 acres of wetlands and mechanical clearing of 0.152 acre of wetlands.

All work is to be completed in accordance with attached drawings entitled: “US 21 North Phase I and SC 51 & US 21 North Phase II" sheets 1 through 21, and dated December 6, 2021.

Project Location:
The project is located along a 5.7-mile-long segment of roadway including US 21 from the intersection of US 21 and SC 160/North White Street to the intersection of US 21 and SC 51 and approximately one mile of SC 51 to the state boundary near Fort Mill in York County, South Carolina (Latitude: 35.056328 °, Longitude: -80.937939 °)

General Permit Conditions:

1. The time limit for completing the work authorized ends on **March 31, 2028**. If you find that you need more time to complete the authorized activity, submit your request for a time extension to this office for consideration at least one month before the above date is reached.

2. You must maintain the activity authorized by this permit in good condition and in conformance with the terms and conditions of this permit. You are not relieved of this requirement if you abandon the permitted activity, although you may make a good faith transfer to a third party in compliance with General Condition 4 below. Should you wish to cease to maintain the authorized activity or should you

desire to abandon it without a good faith transfer, you must obtain a modification of this permit from this office, which may require restoration of the area.

3. If you discover any previously unknown historic or archeological remains while accomplishing the activity authorized by this permit, you must immediately notify this office of what you have found. We will initiate the Federal and state coordination required to determine if the remains warrant a recovery effort or if the site is eligible for listing in the National Register of Historic Places.

4. If you sell the property associated with this permit, you must obtain the signature of the new owner in the space provided and forward a copy of the permit to this office to validate the transfer of this authorization.

5. If a conditioned water quality certification has been issued for your project, you must comply with the conditions specified in the certification as special conditions to this permit. For your convenience, a copy of the certification is attached if it contains such conditions.

6. You must allow representatives from this office to inspect the authorized activity at any time deemed necessary to ensure that it is being or has been accomplished in accordance with the terms and conditions of your permit.

Special Permit Conditions:

See Appendix A, pages 5 and 6.

Further information:

1. Congressional Authorities: You have been authorized to undertake the activity described above pursuant to:

☐ Section 10 of the Rivers and Harbors Act of 1899 (33 USC 403)

☒ Section 404 of the Clean Water Act (33 USC 1344)

☐ Section 103 of the Marine Protection, Research and Sanctuaries Act of 1972 (33 USC 1413)

2. Limits of this authorization.

a. This permit does not obviate the need to obtain other Federal, State or local authorizations required by law.

b. This permit does not grant any property rights or exclusive privileges.

c. This permit does not authorize any injury to the property or rights of others.

d. This permit does not authorize interference with any existing or proposed Federal project.

3. Limits of Federal Liability. In issuing this permit, the Federal Government does not assume liability for:

a. Damages to the permitted project or uses thereof as a result of other permitted or unpermitted activities or from natural causes.

b. Damages to the permitted project or uses thereof as a result of current or future activities undertaken by or on behalf of the United States in the public interest.

c. Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit.

d. Design or construction deficiencies associated with the permitted work.

e. Damage claims associated with any future modification, suspension, or revocation of this permit.

4. Reliance on Applicant's Data. The determination of this office that issuance of this permit is not contrary to the public interest was made in reliance on the information you provided.

5. Reevaluation of Permit Decision. The Corps may reevaluate its decision on this permit any time the circumstances warrant. Circumstances that could require a reevaluation include, but are not limited to:

a. Failure to comply with the terms and conditions of this permit.

b. The information provided by you in support of your permit application proves false, incomplete, or inaccurate (See 4 above).

c. Significant new information surfaces which the Corps did not consider in reaching the original public interest decision.

Such a reevaluation may result in a determination that it is appropriate to use the suspension, modification, and revocation procedures contained in 33 CFR 325.7 or enforcement procedures such as those contained in 33 CFR 326.4 and 326.5. The referenced enforcement procedures provide for the issuance of an administrative order requiring you to comply with the terms and conditions of your permit and for the initiation of legal action where appropriate. You will be required to pay for any corrective measures ordered by the Corps, and if you fail to comply with such directive, the Corps may in certain situations (such as those specified in 33 CFR 209.170) accomplish the corrective measures by contract or otherwise and bill you for the cost.

6. Extensions. General condition 1 establishes a time limit for the completion of the activity authorized by this permit. Unless there are circumstances requiring either a prompt completion of the authorized activity or a reevaluation of the public interest decision, the Corps will normally give favorable consideration to a request for an extension of this time limit.

Your signature below, as permittee, indicates that you accept and agree to comply with the terms and conditions of this permit.

Jackie Galloway — 3/22/2023

(PERMITTEE) **(DATE)**

For **SC Department of Transportation**
C/O Mr. Sean Connolly

Jackie Galloway

PRINT NAME

This permit becomes effective when the Federal official, designated to act for the Secretary of the Army, has signed below.

Ronnie Smith — 3/24/2023

(DISTRICT ENGINEER) **(DATE)**
Andrew C. Johannes, PhD PE PMP
or their Designee
Ronnie Smith
Chief, Northeast Branch

When the structures or work authorized by this permit are still in existence at the time the property is transferred, the terms and conditions of this permit will continue to be binding on the new owner(s) of the property. To validate the transfer of this permit and the associated liabilities associated with compliance with its terms and conditions, have the transferee sign and date below.

(TRANSFEREE) (PRINT NAME) **(DATE)**

APPENDIX A
SPECIAL CONDITIONS FOR PERMIT SAC-2015-00812

a. The permittee agrees to provide all contractors associated with construction of the authorized activity a copy of the permit and drawings.

b. A copy of the permit must be available at the construction site at all times.

c. The permittee shall submit a signed compliance certification to the Corps within 60 days following completion of the authorized work and any required mitigation. The certification will include:

1. A copy of this permit.

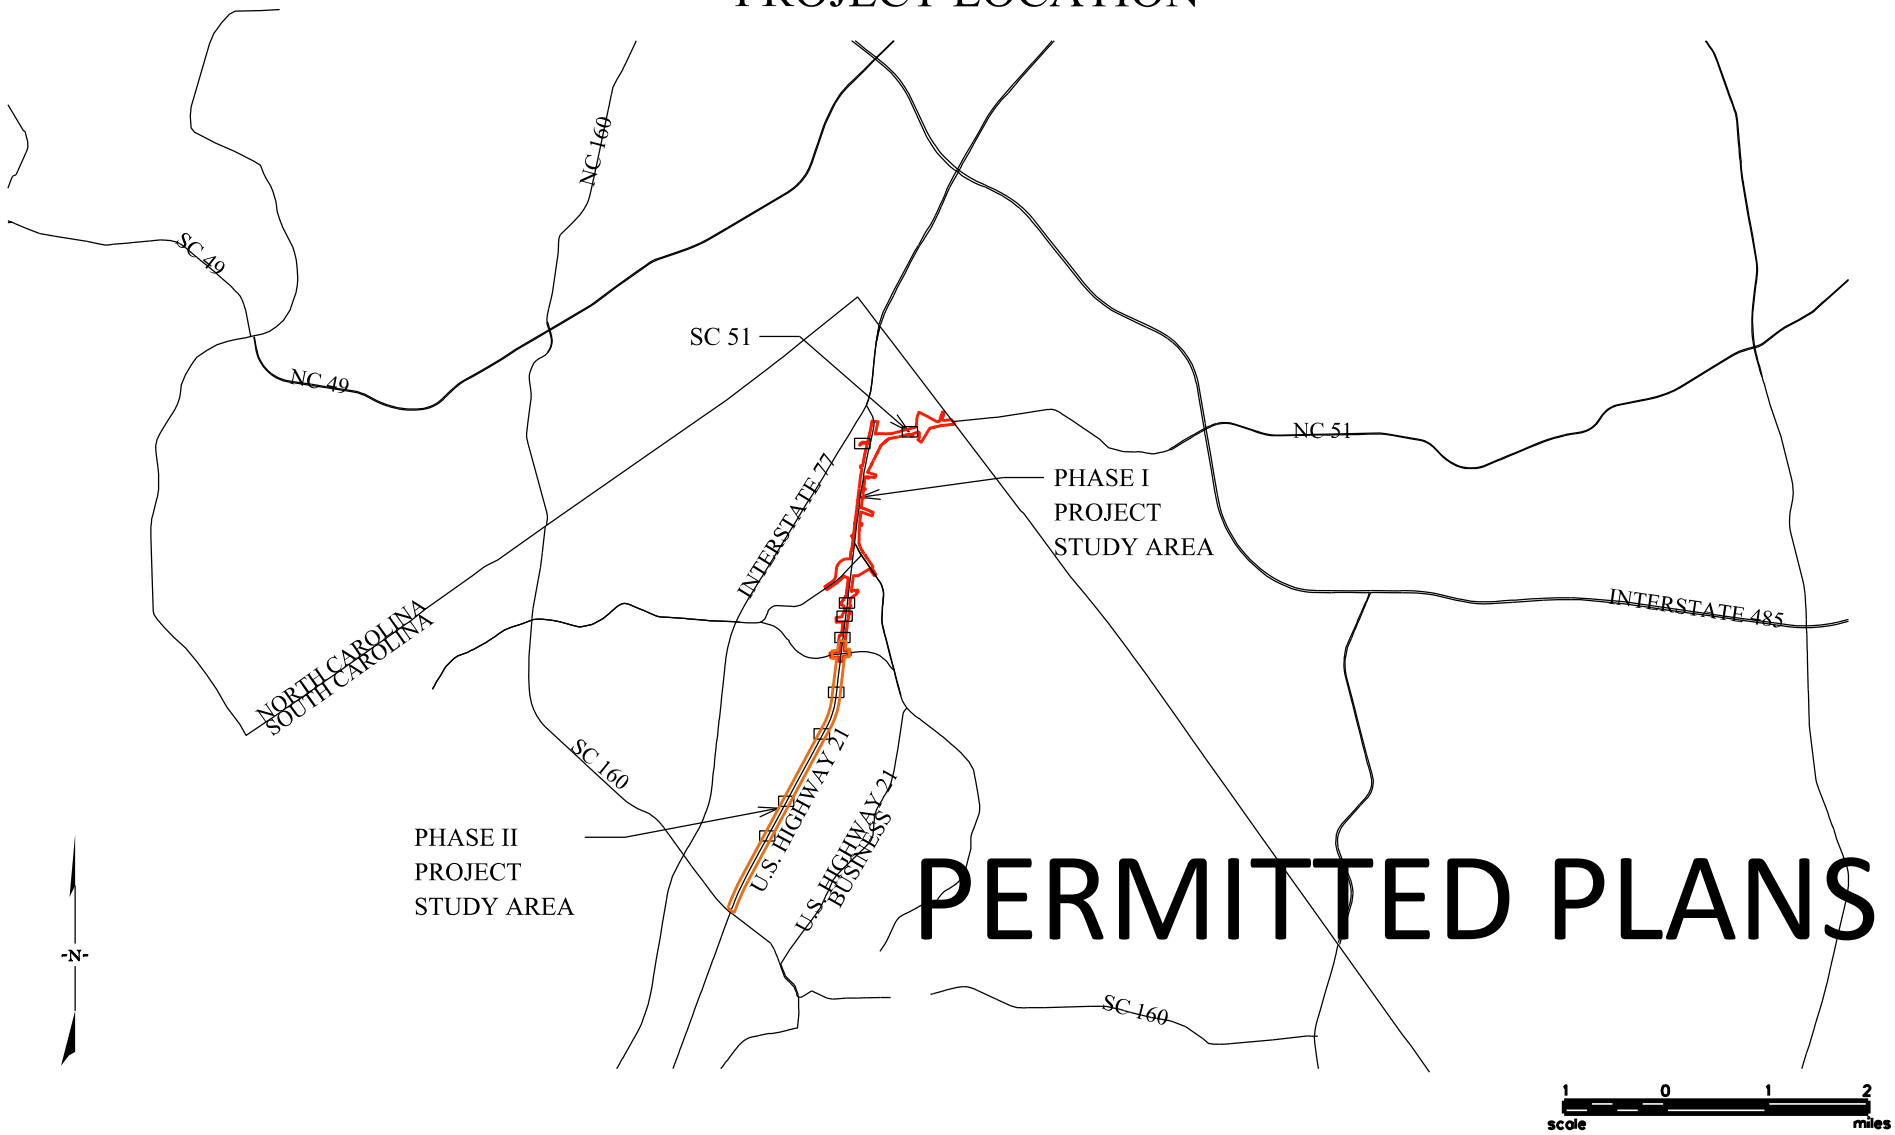
2. A statement that the authorized work was done in accordance with the Corps authorization, including any general or specific conditions.

3. A statement that any required mitigation was completed in accordance with the permit conditions.

4. The signature of the permittee certifying the completion of the work and mitigation.

d. That as compensatory mitigation for impacts to aquatic resources, the permittee agrees to purchase a total of 7,175.5 stream mitigation credits from the following mitigation banks: Eagle House Mitigation Bank, Sandy Fork Mitigation Bank, and Turner's Branch Mitigation Bank. Specifically, the permittee will purchase 3,267.6 stream restoration credits and 253.37 stream preservation credits from Eagle House Mitigation Bank, 320.15 stream restoration credits and 283.15 stream preservation credits from Sandy Fork Mitigation Bank, and 3,051.23 stream preservation credits from Turner's Branch Mitigation Bank. In addition, the permittee agrees to purchase a total of 3.18 compensatory wetland credits from Eagle House Mitigation Bank and Rocky Creek Mitigation Bank. Specifically, the permittee will purchase 1.26 wetland restoration credits and 0.62 wetland preservation credits from Eagle House Mitigation Bank and 0.7 wetland restoration credits and 0.6 wetland preservation credits from Rocky Creek Mitigation Bank. Also, the permittee will debit a total of 1.905 acres from the Black River Mitigation Bank.

e. In order to fulfill your responsibility to complete the required compensatory mitigation as set forth in Special Condition d, the permittee must submit evidence of the purchase of required mitigation credits to both the Corps of Engineers and SCDHEC prior to commencement of the authorized work.



f. **That the permittee shall utilize clean fill materials for the construction of the US 21 and SC 51 Roadway Widening project that are free of potential sources of pollution to protect the water quality of the tributaries to Blankmanship Branch, tributaries to Jackson Branch or Steele Creek.**

g. **The permittee must implement appropriate best management practices that will minimize erosion and migration of sediments on and off the project site during and after construction. These practices should include the use of appropriate grading and sloping techniques, mulches, silt fences, or other devices capable of preventing erosion, migration of sediments, and bank failure. All disturbed land surfaces and sloped areas affected by the project must be stabilized upon project completion. This will include all requirements of the Water Quality Certification as approved by SCDHEC on January 5, 2023.**

h. **Prior to beginning the authorized work, the permittee must coordinate with the local NFIP flood plain manager and comply with FEMA requirements. A list of NFIP floodplain managers may be found at: https://www.dnr.sc.gov/water/flood/index.html.**

i. **The permittee shall clearly plot the Steele Creek ARP Church Cemetery/Blackstock Cemetery (SHPO Site No. 3799) on all construction plans and the permittee shall agree to place a 40-meter buffer area around this site with an exception being along Tributary E within the proposed right-of-way which will have the fencing placed along the north side of the channel. This buffer zone would be clearly marked in the field using orange fencing during construction and all ground disturbance, construction, and staging activities shall be conducted outside of this buffer area. If activities associated with the construction of this project enter into this site or the area within the protective fencing, the permittee will immediately cease these activities and directly contact the Corps to determine why this occurred. The Corps will initiate the Federal, Tribal, and state coordination required and will determine what actions would be required to mitigate these impacts**

Jackie Galloway, SCDOT
PO BOX 191
COLUMBIA, SC 29202

Re: Certification in Accordance with Section 401 of the Clean Water Act, as amended.

SC DOT
Jackie Galloway, SCDOT
US 21 & SC 51 Interchange
Steele Creek
York County
P/N: SAC-2015-00812 Revised

Dear Sir or Madam:

South Carolina Department of Health and Environmental Control (DHEC) staff have reviewed plans for this project and determined there is a reasonable assurance that the proposed project will be conducted in a manner consistent with the Certification requirements of Section 401 of the Federal Clean Water Act, as amended. In accordance with the provisions of Section 401, we certify that this project, subject to the indicated conditions, is consistent with applicable provisions of Section 303 of the Federal Clean Water Act, as amended. We also hereby certify that there are no applicable effluent limitations under Sections 301(b) and 302, and that there are no applicable standards under Sections 306 and 307.

This certification is subject to the following conditions:

401 Water Quality Certification Conditions:

1. The applicant must implement appropriate best management practices that will minimize erosion and migration of sediments on and off the project site during and after construction. These practices should include the use of appropriate grading and sloping techniques, mulches, silt fences, or other devices capable of preventing erosion, migration of sediments, and bank failure. All disturbed land surfaces and sloped areas affected by the project must be stabilized. Customize Text

2. Prior to beginning any land disturbing activity, appropriate erosion and siltation control measures (i.e., silt fences or barriers) must be in place and maintained in a functioning capacity until the area is permanently stabilized.

3. Materials used for erosion control (e.g., hay bales or straw mulch) will be certified as weed free by the supplier.

4. All necessary measures must be taken to prevent petroleum products, tar, trash, construction debris, and other pollutants from entering the adjacent offsite areas/wetlands/waters.

5. Once the project is initiated, it must be carried to completion in an expeditious manner to minimize the period of disturbance to the environment.

6. Upon project completion, all disturbed areas must be permanently stabilized with vegetative cover (preferable), riprap or other erosion control methods as appropriate.

7. The project must comply with any applicable floodplain, stormwater, land disturbance, or riparian buffer ordinances.

8. As compensatory mitigation for unavoidable impacts, the applicant must purchase 7,175.5 stream mitigation credits and 3.18 freshwater wetland credits from the USACE-approved mitigation banks as described in the November 9, 2022 revised mitigation plan in the quantities and types specified (restoration and preservation) in the revised mitigation plan. The applicant must also purchase 1.905 acres of freshwater wetland mitigation (representing a 3:1 ratio of compensatory mitigation to impacts due to watershed location) from the SCDOT Black River Mitigation Bank as specified in the same plan.

9. The applicant must submit evidence to the USACE and to the SCDHEC that the number and type of stream and wetland mitigation credits and wetland acres have been purchased from the specified approved banks as referenced above in condition number eight and in the revised mitigation plan dated November 9, 2022, within 60 days of permit issuance or prior to beginning work authorized by the Department of the Army permit.

DHEC reserves the right to impose additional conditions on the Certification to respond to unforeseen, specific problems that might arise and to take any enforcement action to ensure compliance with State water quality standards.

Sincerely,

Nathan Haber, Director
Division of Water Quality

RE: Project No. P0042332/11149-004 – US21/SC51
York Co: Relocation Package – AT&T Transmission

Dear Mr. Moss –

Below you will find a brief description of the proposed work and submittal explanation. Please refer to AT&T Transmission's individual plans for details, or this document for plan status.

Scope of Work and Package Contents

Relocation Package

- Utility Agreement
- Detailed Cost Estimate
- Encroachment Permit Application
- Relocation Plans and associated U-sheets

Scope of Work Summary

Location	Utility Type	Scope of Work	Cost*
Springfield Farm	Underground Communication	Install new manhole, remove existing manhole in conflict and reconnect cables/conduits.	York County

It is STV's recommendation that this relocation package be approved and proceed to the formal agreement.

Should you have any additional questions or comments, please feel free to call me (843-207-2031) or email me at natalie.roumillat@stvinc.com.

Sincerely,

N. Oriana Roumillat

Agreement # _____

UTILITY AGREEMENT

York County Project No. 11149-004 Route (or Road No.) US 21 NORTH AND SC 51

This Agreement made this _____ day of _____, 20_____ by and between

York County, hereinafter called "County" and the utility company

AT&T Enterprises, LLC.

hereinafter called "Company."

DEFINITIONS

Plans – detailed drawings or diagrams showing the stages for the relocation project

Schedule – the estimated number of days to complete each stage of the relocation project

Cost Estimate – the approximate cost of the relocation project

Actual Cost – the amount the Company pays to complete the relocation project

W I T N E S S E T H:

1. It is mutually agreed by and between the parties hereto that the Company shall perform or cause to be performed, the following work to its utility property facilities as shown on the Plans and Cost Estimate attached and incorporated into this agreement.

General description:

AT&T Enterprises, LLC. will need to engineer and inspect a contractor relocate a manhole at the

intersection of Hwy. 21 and Andrew Tucker Road.

2. The Company hereby agrees to relocate its utility facilities in conflict with highway construction in accordance with the provisions set forth in the Federal Highway Administration's FAPG 23 C.F.R. § 645A and the SCDOT's "A Policy for Accommodating Utilities on Highway Rights-of-Way." The Cost Estimate is:

TOTAL $29,550.00

County Share $29,550.00 Company Share $0.00

(a) The Company ☐ does have the right of occupancy in its existing location by reason of holding the fee, an easement, or other real property interest or ☑ does not and is in the existing right of way by encroachment.

(b) This section of line has been in service for approximately 10 years.

(c) Such work as is necessary to relocate, alter, or maintain the facility will be done in such a manner to minimize interference with or endangering the safety of the general public in their use of the roads as a highway. Traffic control and signing will be in accordance with "The Federal Highway Administration's Manual on Uniform Traffic Control Devices for Streets and Highways".

3. The Company shall designate an employee or agent who possesses knowledge of the relocation project and authority to make decisions on behalf of the Company to serve as the Designated Contact Person. The Designated Contact Person shall attend all bi-weekly construction meetings or ensure that any temporary designee attending a bi-weekly meeting possesses knowledge of the relocation project and authority to make decisions on behalf of the Company. The County shall communicate with the Company about the relocation project through the Designated Contact Person. The Company shall notify the County in writing of any changes to the Designated Contact Person within seven calendar days of the change. The Company designates the following person as the Designated Contact Person for this project:

Name: Katrina Ivey
Phone Number: 678-641-5522
Email: ki2863@att.com

4. The County shall provide the Company written notice, by email, of the date the County intends to begin advertising the bid. The Company shall update its Schedule within forty five days after receiving written notice of the bid advertisement. The County shall provide the Company notice of the preconstruction meeting, which the Company's Designated Contact Person shall attend.

5. The Company shall begin relocation project work promptly upon receiving authorization in writing, by email, from the County and complete the work in accordance with the schedule and as promptly as is practicable. Within ten calendar days of receiving written authorization, the Company shall provide notice to the County of the date on which work is expected to begin.

6. The Company will perform the work provided for in this agreement by the method checked below, in accordance with the provisions FAPG 23 CFR § 645.115:

( ) BY COMPANY'S REGULAR FORCES

(●) BY CONTRACT: (State one of recognized reasons for necessity of performing work in this manner)

AT&T does not have the work force for engineering / inspection or construction, therefore contract companies are used.

If the Company, subject to prior approval, proposes to contract a portion of or all of the work covered by this agreement, then the Company must submit a list of items in the Cost Estimate that will be accomplished by contract. Where the Company elects to solicit competitive bids from a list of qualified contractors rather than through advertising in a publication, the names and addresses of those contractors must be written on the Cost Estimate or furnished to the County in advance of the Company's solicitation of bids.

7. The County will reimburse the utility company for costs incurred for work performed in accordance with the Plans and Cost Estimate. The Company must provide accurate records supporting all costs incurred and submitted for reimbursement. The method of developing the relocation costs shall be one of the following alternatives.

☑ Actual and related direct costs accumulated in accordance with a work order accounting procedure prescribed by the applicable Federal or State regulatory body.

☐ Unit costs, such as broad gauge units of property, as used in own operations. (This method must have prior approval.)

The County will not pay for any components or items considered to be an upgrade unless such upgrades are required by applicable law, necessitated by the relocation, or proven to be more cost efficient.

8. All work performed by the Company shall be performed according to the plans and estimates approved by the County. The County is not obligated to reimburse the Company for any work not included in the Plans or Cost Estimate. The County Engineer may approve reimbursement for Actual Costs or additional work not included in the Plans or Cost Estimate if (1) the Actual Costs or additional work is necessary for the relocation project and (2) the Actual Costs or additional work do not exceed the Cost Estimate by more than 50%. The Company must seek and receive prior written approval before incurring costs for additional work.

9. The Plans must show the existing facilities, permanent changes to be made, and the stages by which these changes are to be accomplished. The Schedule must estimate the time required for each stage.

10. Periodic progress billings of incurred costs may be made by the Company to the County not to exceed monthly intervals and amounting to at least $2500.00; however, total progress billing payments shall not exceed the Cost Estimate or approved Actual Cost.

Upon completion of the work and no later than three months thereafter, the Company shall, at the earliest date practicable, furnish the County with five (5) copies of its final and complete billing of all costs incurred in connection with the work performed hereunder, such statement to follow as closely as possible the order of the items contained in the Cost Estimate. The totals for labor, overhead construction cost, travel expense, transportation, equipment, material and supplies, handling cost, and other services shall be shown in such a manner as will permit ready comparison with the Plans and Cost Estimates. Items of materials shall be itemized where they represent major components.

Credit shall be given for usable materials recovered from permanent or temporary installations. The final billing shall show the description and site of the project, the date on which the first work was performed; or, if preliminary engineering or right-of-way items are involved, the date on which the earliest item of billed expense was incurred, the completion date and the location where the records and accounts billed can be audited. The Company shall make adequate reference in the billing to its records, accounts, and other documents. Contractors and any subcontractors are to maintain all books, documents, papers, accounting records, and other evidence pertaining to costs incurred and to make such materials available at their respective offices at all reasonable times during the contract for inspection by the County or any authorized representatives of the County. Copies shall be furnished if requested.

Final billings submitted by the Company shall carry a statement certifying that all items claimed have been reviewed and are in conformity with the provisions of the agreement, that credits have been given for all salvaged materials as required, and that all contractor's bills have been paid in full. This statement shall be signed by an authorized representative of the Company.

In the event a final and complete billing has not been received by the County three months following the completion of work and the Company has not during that period demonstrated to the County's satisfaction a hardship in completing that billing, the County may, in its sole discretion, consider the last payment made to be the final payment due under this agreement.

11. An extreme delay means the Company failed to begin relocation project work after receiving notice from the County to begin work and caused a thirty-day delay to the entire road construction project. The County shall notify the Company in writing if the Company causes an extreme delay. The Company shall have thirty calendar days from the date of the notice to stop the delay and expeditiously work to complete the relocation project. If the Company fails to stop the delay within thirty days after receiving notice of the delay, the County may require the Company to pay the costs associated with the delay of the project. The costs may include contractor remobilization costs, traffic control costs for the time of the delay, and any other costs attributable to the Company's delay. The County may deduct these costs from the retainage or any reimbursement owed to the Company. Should the costs of the delay exceed the amount of retainage or reimbursement owed to the Company, the County may invoice the Company for the costs of the delay, and the Company shall pay any invoices for the costs associated with extreme delays by the Company. The County may pursue any remedy available in law or equity to recover the costs of the delay.

Should a substantial hardship prevent the Company from performing the relocation project work and cause an extreme delay, the Company may apply in writing for a waiver excusing all or a portion of the delay and waiving all or a portion of the costs associated with the extreme delay. In its application, the Company shall state the cause of the delay and the time in which the Company shall resolve the hardship and continue with the relocation project work. The County Engineer shall determine whether to grant the waiver and what portion of the costs to waive.

Should a dispute arise about the cost levied upon the Company for an extreme delay, the County and the

Company agree participate in pre-litigation mediation and agree to diligently work in good faith to resolve any disputes associated with the costs charged to the Company for extreme delays. The parties shall select a mediator approved by both parties and set forth any resolutions in writing signed by both parties.

Should the parties fail to reach an agreement through pre-litigation mediation, the parties may seek a resolution for the dispute through the Court of Common Pleas located in York County, South Carolina, or the United States District Court for the State of South Carolina. This agreement shall be governed exclusively by the laws of the State of South Carolina without giving effect to its conflicts of law provisions.

12. The County shall have the right to inspect all recovered materials from the permanent facility prior to disposal by sale or scrap. This requirement will be satisfied by the Company giving notice to the County of the time and place the materials will be available for inspection. This notice is the responsibility of the Company and it may be held accountable for full value of materials disposed of without notice. The Company shall furnish a listing on final billings of major items not eligible for salvage credit and reasons therefore.

13. The Company will abide by the contract cost principles as set forth in FAPG 23 CFR 645A.

14. The Company will not participate directly or indirectly in any practice that subjects persons to discrimination because of their race, color, religion, sex, or national origin.

COMBINATION LINE DEPICTION CODES

SHOW COMBINED LEVEL C & D SUE WILL INCLUDE THE FOLLOWING LEVEL QUALITY CODES:

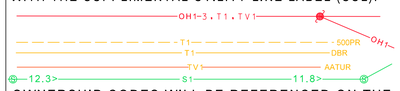
LINE SHOWN DEPICTS QUALITY LEVEL C <C>

<C> T1

LINE SHOWN DEPICTS QUALITY LEVEL D <D>

<D> T1

MULTIPLE SUE OWNERS CAN BE DEPICTED OWNERSHIP WITH THE FOLLOWING CODES:



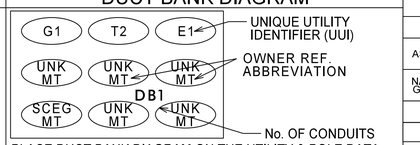
(A) UTILITY OWNER "X"

<C> (A) T1

(B) UTILITY OWNER "Y"

<D> T1 (B)

UTILITY LINES THAT REQUIRE MORE DETAILED INFORMATION ON THE PLAN SHEET CAN BE LABELED WITH THE SUPPLIMENTAL UTILITY LINE LABEL (SUL):



OWNERSHIP CODES WILL BE REFERENCED ON THE TITLE/OWNER SHEET AND THE UTILITY & POLE DATA SHEET.

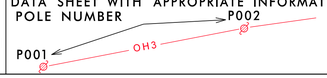
SEWER MANHOLE NUMBERS (SMN)

S001 (S) SANITARY SEWER MANHOLE

DESIGNATE EACH SANITARY SEWER MANHOLE WITH A SEWER MANHOLE NUMBER (SMN). REFERENCE THIS SMN ON THE UTILITY DATA SHEET AND LIST ELEVATIONS.

DUCT BANK DIAGRAM

PLACE DUCT BANK DIAGRAM ON THE UTILITY & POLE DATA SHEET BELOW THE UTILITY & POLE DATA CHART. NOTE THE UUI OF THE DUCT BANK ON THE DIAGRAM. DEPICT THE CORRECT NUMBER OF CONDUITS IN THE DUCT AND THE USAGE OF EACH. MARK EMPTIES (IF KNOWN) WITH OWNER REFERENCE ABBREVIATION AND "MT".



UTILITY INFORMATION TAGS (UIT)

WHEN UTILITY APPURTENANCES NEED DESCRIBING, PLACE A UIT NEXT TO THE CELL OR OUTLINED AREA. PLACE THE INFORMATION ON THE UTILITY DATA SHEET. DESIGNATE THE UTILITY BY THE OWNER NUMBER AND "T001" CODE IN THE "UTILITY" COLUMN. (IE - T2 T001).

(X) T001

UTILITY POLE ID NUMBER (UPIN)

TAG EACH UTILITY POLE WITH A UTILITY POLE ID NUMBER (UPIN) STARTING AT THE BEGINNING STATION. REFERENCE UPIN ON THE UTILITY & POLE DATA SHEET WITH APPROPRIATE INFORMATION.

UTILITY INFORMATION ABBERVIATIONS

QUALITY LEVEL DEFINITIONS

Level D. This level information comes solely from existing utility records. It may provide an overall "feel" for the congestion of utilities, but it is often highly limited in terms of comprehensiveness and accuracy. Its usefulness should be confined to project planning and route selection activities.

Level C. This level involves surveying visible aboveground utility facilities (e.g., manholes, valve boxes, posts) and correlating this information with existing utility records. When using this information, it is not unusual to find that many underground utilities have been either omitted or erroneously plotted. Its usefulness, therefore, should be confined to rural projects where utilities are not prevalent, or are not too expensive to repair or relocate.

Level B. This level involves the use of surface geophysical techniques to determine the existence and horizontal position of underground utilities. This activity is called "designating." Two-dimensional mapping information is obtained. This information is usually sufficient to accomplish preliminary engineering goals. Decisions can be made on where to place storm drainage systems, footers, foundations and other design features in order to avoid conflicts with existing utilities. Slight adjustments in the design can produce substantial cost savings by eliminating utility relocations.

Level A. This level involves the use of nondestructive digging equipment at critical points to determine the precise horizontal and vertical position of underground utilities, as well as the type, size, condition, material and other characteristics. This activity is called "locating." It is the highest level presently available. When surveyed and mapped, precise plan and profile information are available for use in making final design decisions. By knowing exactly where a utility is positioned in three dimensions, the designer can often make small adjustments in elevations or horizontal locations and avoid the need to relocate utilities. Additional information (e.g., utility materials, condition, size, soil contamination, paving thickness) also assists the designer and Utility Company in their decisions.

YORK COUNTY
SOUTH CAROLINA

US 21 NORTH PHASE 1 & SC 51
POLE DATA SHEET

SCALE: N/A RTE. US 21 DWG. NO. U4D

FOR INFORMATION ONLY

FED. ROAD DIV. NO.	STATE	COUNTY	PROJECT ID	PROJECT NO.	ROUTE NO.	SHEET NO.
3	S.C.	YORK	0042332	1149-004	US 21 SC 51	U5

GENERAL NOTES

THESE PLANS ARE TO BE USED ONLY AS REFERENCE FOR UTILITY RELOCATIONS.

ALL RELOCATIONS ARE APPROXIMATE BASED ON INFORMATION PROVIDED BY THE INDIVIDUAL UTILITY OWNERS.

ALL PROPOSED RELOCATIONS ARE CONSIDERED INCOMPLETE AND THE INDIVIDUAL UTILITY OWNERS MAY REQUIRE ADDITIONAL RELOCATIONS.

ACTUAL FIELD CONDITIONS WILL DICTATE THE PRECISE LOCATION OF THE RELOCATED UTILITY THROUGH COORDINATION BETWEEN THE CONTRACTOR AND THE UTILITY OWNER.

THE CONTRACTOR IS REQUIRED TO CONTACT 811 AS WELL AS THE NON-811 MEMBER UTILITIES THREE DAYS PRIOR TO EXCAVATING ACTIVITIES.
1-888-721-7877

SPECIAL PROVISIONS

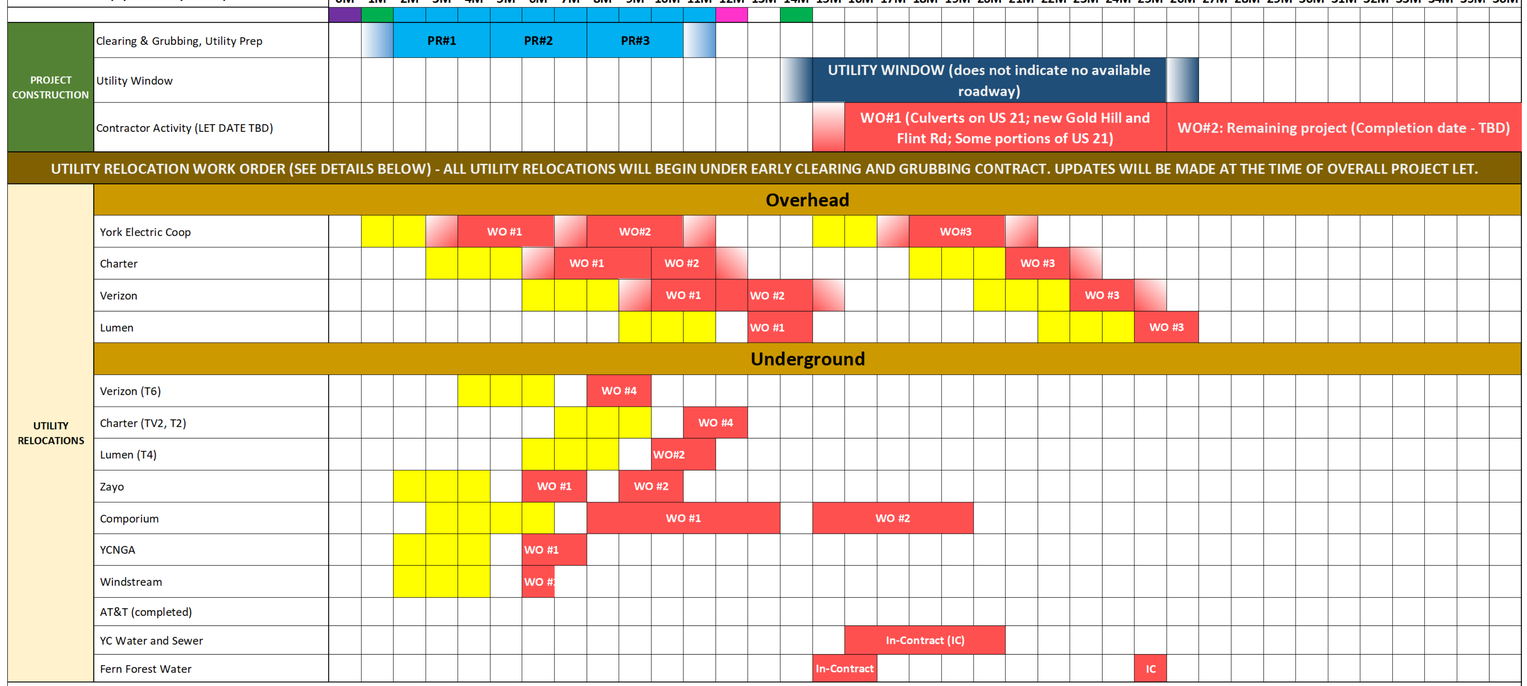
UTILITY STAKING:

CONTRACTOR SHALL BE AWARE ON AS NEEDED BASIS, UTILITIES MAY REQUEST STAKING OF CONSTRUCTION ITEMS AND RIGHT-OF-WAY TO HELP FACILITATE RELOCATIONS AND TO AVOID POTENTIAL CONFLICT WITH ROADWAY CONSTRUCTION AND OTHER UTILITIES.

UTILITY RELOCATION CLEARING SEQUENCE:

UTILITY RELOCATION APPROACH:

IT IS THE INTENTION OF THE UTILITIES TO RELOCATE ACCORDING TO THE FOLLOWING CONSTRUCTION SEQUENCE. THE CLEARING CONTRACTOR SHALL CLEAR AND GRUB ACCORDING TO THE PRIORITY SHOWN IN CHART.



IT IS THE INTENT THAT UTILITIES WILL START WORKING IN ALL AVAILABLE LOCATIONS, WHERE AND WHEN POSSIBLE. EXISTING UTILITIES WILL REMAIN ACTIVE UNTIL ALL NEW FACILITIES ARE INSTALLED AND CUT OVER.

KEY

- notifications (permitting, procurement, scheduling)
- active relocation/ construction activity
- some activity
- no activity
- Project Bid (Early C&G only)
- NTP
- Contractor on-site for C&G operations
- Utility Window
- Project Bid (TBD - For visual purpose only)

**THIS BAR CHART IS FOR INFORMATION ONLY. THE PURPOSE IS TO VISUALLY SHOW THE ORDER OF UTILITY RELOCATIONS IN RELATION TO OTHER CONSTRUCTION ACTIVITY AND NEEDS. IT IS THE CONTRACTOR'S RESPONSIBILITY TO VERIFY UTILITY RELOCATION STATUS. CONTRACTOR ACTIVITY FOR THE PROJECT WILL EXTEND FURTHER THAN WHAT IS SHOWN.

US 21/ SC 51 Widening
(Updated Sept 2023)

WORK AREAS, CONTRACTOR ACTIVITY, AND PRECEDING RELOCATION REQUIRED FOR UTILITY RELOCATION

York Electric Cooperative (E1):
WO #1: SC 51 (need clearing and new alignment graded)
WO #2: Old Nations to SC 51
WO#3: Remaining US 21 (require fill efforts from prime)

Charter (TV2, T2):
WO #1: SC 51 (need clearing/grading & YEC OH)
WO #2: Old Nations to SC 48 (need clearing/grading & YEC OH)
WO #3: Remaining US 21 (need YEC OH)
WO #4: US 21 - UG from Sta 45+00 to 72+00

Verizon (T6):
WO #1: SC 51 (need clearing/grading & YEC OH)
WO #2: Old Nations to SC 48 (need clearing/grading & YEC OH)
WO #3: Remaining US 21 (need YEC OH)
WO #4: US 21 - UG from Sta 45+00 to 61+00

Zayo (T5):
WO #1: Gold Hill to SC 51 & SC 51 (need clearing/grading)
WO #2: SC 460 to Gold Hill (need clearing/grading)

Comporium (T1):
WO #1: Gold Hill to SC 51 & SC 51 (need clearing/grading)
WO #2: SC 460 to Gold Hill (need clearing/grading)

AT&T (T3):
Work is complete for Encrochment #A029Y30

Windstream:
WO #1: Adjust as needed; 1 month notification

Lumen (T4):
WO #1: Old Nations to end of SC 51 (OH) (need YEC & Tele OH
WO #2: Gold Hill to Old Nations (UG only) (need C&G)
WO #3: All remaining OH (need YEC OH & Other OH Telecoms

YCNGA (G1):
WO #1: SC 51 (need clearing & grubbing)
WO#2: All remaining relocations

York County Water/Sewer (W1/SS1):
In-contract

Fern Forest Water (T2):
In-contract (2 parts)

Clearing Priorities:
PR#1:
C&G SC51 and Flint Hill Road (new and existing); Includes rough grading new alignments of existing ground
PR#2:
C&G RT/LT Side from Gold Hill to SC 43 and cut from Sta 44+00 to 54+00 LT on US 21; Includes rough grading for new alignment for Gold Hill of existing ground
PR#3:
Remaining project

RE: Project No. P0042332/11149-004 – US21/SC51
York Co: Relocation Package – Comporium

Dear Mr. Moss –

Below you will find a brief description of the proposed work and submittal explanation. Please refer to Comporium's individual plans for details, or this document for plan status.

Scope of Work and Package Contents

Relocation Package

- Utility Agreement
- Detailed Cost Estimate
- Encroachment Permit Application (Applied but not included)
- Relocation Plans and associated U-sheets

Scope of Work Summary

Location	Utility Type	Scope of Work	Cost*
US21	Underground communication	Install new underground communication cables from Sta 14+00 to 135+00	York County
US21	Overhead communication attached to York Electric	Install new overhead cables attached to York Electric poles from Sta 79+00 to 90+00	York County
SC51	Underground communication	Install new underground communication cables from Sta 298+00 to 340+00	York County
SC51	Overhead communication attached to York Electric	Install new overhead cables attached to York Electric poles from Sta 333+00 to 339+00	York County
Gold Hill	Underground communication	Install new underground communication cables from Sta 15+00 to 32+00	York County
Old Nation	Underground communication	Install new underground communication cables from Sta 10+00 to 17+00	York County

US21 Business	Underground communication	Install new underground communication cables from Sta 10+00 to 23+00	York County
Old SC51	Underground communication	Install new underground communication cables from Sta 303+00 to 312+00	York County
Flint Hill	Underground communication	Install new underground communication cables from Sta 17+00 to 22+00	York County
Spring Hill Farm	Underground communication	Install new underground communication cables from Sta 24+00 to 30+00	York County

It is STV's recommendation that this relocation package be approved and proceed to the formal agreement.

Should you have any additional questions or comments, please feel free to call me (843-207-2031) or email me at natalie.roumillat@stvinc.com.

Agreement # _____

UTILITY AGREEMENT

York County Project No. 11149-004 Route (or Road No.) US 21, RT 51, RT-48, J3-140

This Agreement made this _____ day of _____, 20_____ by and between

York County, hereinafter called "County" and the utility company _

Comporium Communications

hereinafter called "Company."

DEFINITIONS

Plans – detailed drawings or diagrams showing the stages for the relocation project

Schedule – the estimated number of days to complete each stage of the relocation project

Cost Estimate – the approximate cost of the relocation project

Actual Cost – the amount the Company pays to complete the relocation project

W I T N E S S E T H:

1. It is mutually agreed by and between the parties hereto that the Company shall perform or cause to be performed, the following work to its utility property facilities as shown on the Plans and Cost Estimate attached and incorporated into this agreement.

General description:

Relocate buried communication facilities in conjunction with York County Project 11149-004.

Roads impacted include US 21, Old Nation Rd, Gold Hill Rd, Hwy 51 & Springhill Farm Rd.

2. The Company hereby agrees to relocate its utility facilities in conflict with highway construction in accordance with the provisions set forth in the Federal Highway Administration's FAPG 23 C.F.R. § 645A and the SCDOT's "A Policy for Accommodating Utilities on Highway Rights-of-Way." The Cost Estimate is:

TOTAL $ 3,545,000

County Share $ 3,545,000 Company Share $_____

(a) The Company ☒ does have the right of occupancy in its existing location by reason of holding the fee, an easement, or other real property interest or ☐ does not and is in the existing right of way by encroachment.

(b) This section of line has been in service for approximately 36 years.

(c) Such work as is necessary to relocate, alter, or maintain the facility will be done in such a manner to minimize interference with or endangering the safety of the general public in their use of the roads as a highway. Traffic control and signing will be in accordance with "The Federal Highway Administration's Manual on Uniform Traffic Control Devices for Streets and Highways".

3. The Company shall designate an employee or agent who possesses knowledge of the relocation project and authority to make decisions on behalf of the Company to serve as the Designated Contact Person. The Designated Contact Person shall attend all bi-weekly construction meetings or ensure that any temporary designee attending a bi-weekly meeting possesses knowledge of the relocation project and authority to make decisions on behalf of the Company. The County shall communicate with the Company about the relocation project through the Designated Contact Person. The Company shall notify the County in writing of any changes to the Designated Contact Person within seven calendar days of the change. The Company designates the following person as the Designated Contact Person for this project:

Name: Eric Kirkland
Phone Number: 803-326-6109
Email: eric.kirkland@comporium.com

4. The County shall provide the Company written notice, by email, of the date the County intends to begin advertising the bid. The Company shall update its Schedule within forty five days after receiving written notice of the bid advertisement. The County shall provide the Company notice of the preconstruction meeting, which the Company's Designated Contact Person shall attend.

5. The Company shall begin relocation project work promptly upon receiving authorization in writing, by email, from the County and complete the work in accordance with the schedule and as promptly as is practicable. Within ten calendar days of receiving written authorization, the Company shall provide notice to the County of the date on which work is expected to begin.

6. The Company will perform the work provided for in this agreement by the method checked below, in accordance with the provisions FAPG 23 CFR § 645.115:

(X) BY COMPANY'S REGULAR FORCES

( ) BY CONTRACT: (State one of recognized reasons for necessity of performing work in this manner)

_____

_____

If the Company, subject to prior approval, proposes to contract a portion of or all of the work covered by this agreement, then the Company must submit a list of items in the Cost Estimate that will be accomplished by contract. Where the Company elects to solicit competitive bids from a list of qualified contractors rather than through advertising in a publication, the names and addresses of those contractors must be written on the Cost Estimate or furnished to the County in advance of the Company's solicitation of bids.

7. The County will reimburse the utility company for costs incurred for work performed in accordance with the Plans and Cost Estimate. The Company must provide accurate records supporting all costs incurred and submitted for reimbursement. The method of developing the relocation costs shall be one of the following alternatives.

[X] Actual and related direct costs accumulated in accordance with a work order accounting procedure prescribed by the applicable Federal or State regulatory body.

[ ] Unit costs, such as broad gauge units of property, as used in own operations. (This method must have prior approval.)

The County will not pay for any components or items considered to be an upgrade unless such upgrades are required by applicable law, necessitated by the relocation, or proven to be more cost efficient.

8. All work performed by the Company shall be performed according to the plans and estimates approved by the County. The County is not obligated to reimburse the Company for any work not included in the Plans or Cost Estimate. The County Engineer may approve reimbursement for Actual Costs or additional work not included in the Plans or Cost Estimate if (1) the Actual Costs or additional work is necessary for the relocation project and (2) the Actual Costs or additional work do not exceed the Cost Estimate by more than 50%. The Company must seek and receive prior written approval before incurring costs for additional work.

9. The Plans must show the existing facilities, permanent changes to be made, and the stages by which these changes are to be accomplished. The Schedule must estimate the time required for each stage.

10. Periodic progress billings of incurred costs may be made by the Company to the County not to exceed monthly intervals and amounting to at least $2500.00; however, total progress billing payments shall not exceed the Cost Estimate or approved Actual Cost.

Upon completion of the work and no later than three months thereafter, the Company shall, at the earliest date practicable, furnish the County with five (5) copies of its final and complete billing of all costs incurred in connection with the work performed hereunder, such statement to follow as closely as possible the order of the items contained in the Cost Estimate. The totals for labor, overhead construction cost, travel expense, transportation, equipment, material and supplies, handling cost, and other services shall be shown in such a manner as will permit ready comparison with the Plans and Cost Estimates. Items of materials shall be itemized where they represent major components.

Credit shall be given for usable materials recovered from permanent or temporary installations. The final billing shall show the description and site of the project, the date on which the first work was performed; or, if preliminary engineering or right-of-way items are involved, the date on which the earliest item of billed expense was incurred, the completion date and the location where the records and accounts billed can be audited. The Company shall make adequate reference in the billing to its records, accounts, and other documents. Contractors and any subcontractors are to maintain all books, documents, papers, accounting records, and other evidence pertaining to costs incurred and to make such materials available at their respective offices at all reasonable times during the contract for inspection by the County or any authorized representatives of the County. Copies shall be furnished if requested.

Final billings submitted by the Company shall carry a statement certifying that all items claimed have been reviewed and are in conformity with the provisions of the agreement, that credits have been given for all salvaged materials as required, and that all contractor's bills have been paid in full. This statement shall be signed by an authorized representative of the Company.

In the event a final and complete billing has not been received by the County three months following the completion of work and the Company has not during that period demonstrated to the County's satisfaction a hardship in completing that billing, the County may, in its sole discretion, consider the last payment made to be the final payment due under this agreement.

11. An extreme delay means the Company failed to begin relocation project work after receiving notice from the County to begin work and caused a thirty-day delay to the entire road construction project. The County shall notify the Company in writing if the Company causes an extreme delay. The Company shall have thirty calendar days from the date of the notice to stop the delay and expeditiously work to complete the relocation project. If the Company fails to stop the delay within thirty days after receiving notice of the delay, the County may require the Company to pay the costs associated with the delay of the project. The costs may include contractor remobilization costs, traffic control costs for the time of the delay, and any other costs attributable to the Company's delay. The County may deduct these costs from the retainage or any reimbursement owed to the Company. Should the costs of the delay exceed the amount of retainage or reimbursement owed to the Company, the County may invoice the Company for the costs of the delay, and the Company shall pay any invoices for the costs associated with extreme delays by the Company. The County may pursue any remedy available in law or equity to recover the costs of the delay.

Should a substantial hardship prevent the Company from performing the relocation project work and cause an extreme delay, the Company may apply in writing for a waiver excusing all or a portion of the delay and waiving all or a portion of the costs associated with the extreme delay. In its application, the Company shall state the cause of the delay and the time in which the Company shall resolve the hardship and continue with the relocation project work. The County Engineer shall determine whether to grant the waiver and what portion of the costs to waive.

Should a dispute arise about the cost levied upon the Company for an extreme delay, the County and the

Company agree participate in pre-litigation mediation and agree to diligently work in good faith to resolve any disputes associated with the costs charged to the Company for extreme delays. The parties shall select a mediator approved by both parties and set forth any resolutions in writing signed by both parties.

Should the parties fail to reach an agreement through pre-litigation mediation, the parties may seek a resolution for the dispute through the Court of Common Pleas located in York County, South Carolina, or the United States District Court for the State of South Carolina. This agreement shall be governed exclusively by the laws of the State of South Carolina without giving effect to its conflicts of law provisions.

12. The County shall have the right to inspect all recovered materials from the permanent facility prior to disposal by sale or scrap. This requirement will be satisfied by the Company giving notice to the County of the time and place the materials will be available for inspection. This notice is the responsibility of the Company and it may be held accountable for full value of materials disposed of without notice. The Company shall furnish a listing on final billings of major items not eligible for salvage credit and reasons therefore.

13. The Company will abide by the contract cost principles as set forth in FAPG 23 CFR 645A.

14. The Company will not participate directly or indirectly in any practice that subjects persons to discrimination because of their race, color, religion, sex, or national origin.

	ETM	ELECTRICAL TRANSFORMER
	EMH	ELECTRICAL MAN HOLE
	EHH	ELECTRICAL HAND HOLE
	EPP	ELECTRIC PEDESTAL
	EBX	ELECTRIC BOX
	ESG	ELECTRIC SWITCH GEAR BOX
	EVT	ELECTRIC VAULT
	EGL	GROUND / LANDSCAPE LIGHT
	EAB	ELECTRIC AIR BRAKE
	ERO	ELECTRIC RESIDENTAL OUTLET

POLE SYMBOLS

SYM	ABV	DESCRIPTION
	PSP	SIGNIFICANT POLE (STEEL, CONCRETE, ETC)
	PP	ELECTRIC, COMBINATION POLE
	PMP	METER POLE
	PLT	TRANSMISSION LINE POLE
	PLP	AREA LIGHT POLE
	PTF	TRAFFIC SIGNAL POLE
	POP	OTHER USE POLE
	PCT	CELL PHONE TOWER
	PTP	TELEPHONE POLE
	PGP	GUY POLE

TRAFFIC CONTROL SYMBOLS

	TFV	TRAFFIC SIGNAL CONTROL VAULT
	TFHH	TRAFFIC CONTROL HAND HOLE
	TFJ	TRAFFIC SIGNAL JUNCTION BOX

GAS SYMBOLS

SYM	ABV	DESCRIPTION
	GM	GAS METER
	GVC	GAS VALVE CAP
	GMH	GAS MAN HOLE
GVT	GVT	GAS VENT
GR	GR	GAS PRESSURE REGULATOR
GTP	GTP	GAS LINE TEST POINT
GTF	GTF	GAS LINE TAP FARM

MISC SYMBOLS

	MWP	UTILITY WITNESS POST
EOI	MOI	END OF INFORMATION
	MUC	MISC / UNKNOWN VALVE CAP OR COVER
	MPB	PAVED OR BURIED MANHOLE / CAP
	MUE	UTILITY TERMINI / ENDS
	MTH	TEST HOLE

TELECOMMUNICATION SYMBOLS

SYM	ABV	DESCRIPTION
	TB	TELEPHONE BOOTH
	TVP	CABLE TV PEDESTAL
	TLC	SUBSCRIBER LOOP CARRIER (aka SLICK)
	TPP	TELEPHONE PEDESTAL
	TMH	TELEPHONE MAN HOLE
	TFOH	FIBER OPTIC HAND HOLE
	THH	TELEPHONE HAND HOLE
	TVHH	CABLE TV HAND HOLE
	TBX	TELEPHONE BOX
	TXB	UG / SPLICE - AG SPLICE BOX
	TRP	TELEPHONE REPEATER
	TVB	CABLE TV BOX
	TUV	UNDERGROUND TELEPHONE VAULT
	UTP	UNDERGROUND TELEPHONE PEDESTAL
	UTV	UNDERGROUND CABLE TV PEDESTAL

WATER SYMBOLS

	WM	WATER METER
	WV	WATER VALVE
	WMW	WATER MONITORING WELL
	WFH	FIRE HYDRANT
	WMH	WATER MAN HOLE
	WAR	WATER AIR RELEASE VALVE
	WVB	WATER VALVE BOX
	WFC	FIRE DEPARTMENT CONNECTION
	WBP	WATER BACKFLOW PREVENTER
	WBO	WATER BLOW OFF VALVE
	WWH	WELL HOUSE
	WPV	POST INDICATOR VALVE

SEWER SYMBOLS

SYM	ABV	DESCRIPTION
	SCO	SEWER CLEAN OUT
	SMH	SEWER MAN HOLE
	SAR	SEWER AIR RELEASE VALVE
	SST	SEWER STEP TANK
	SCV	SEWER CHECK VALVE BOX
	SGP	SEWER GRINDER / PUMP STATION
	SSV	SEWER VALVE
	SLS	SEWER LIFT STATION

NONPOTTABLE WATER SYMBOLS

	ICV	IRRIGATION CONTROL VALVE
	ICB	IRRIGATION CONTROL BOX
	IRH	IRRIGATION / SPRINKLER HEAD

COMBINATION LINE DEPICTION CODES

SHOW COMBINED LEVEL C & D SUE WILL INCLUDE THE FOLLOWING LEVEL QUALITY CODES:

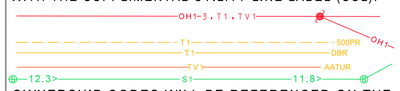
LINE SHOWN DEPICTS QUALITY LEVEL C <C>

<C> T1

LINE SHOWN DEPICTS QUALITY LEVEL D <D>

<D> T1

MULTIPLE SUE OWNERS CAN BE DEPICTED OWNERSHIP WITH THE FOLLOWING CODES:



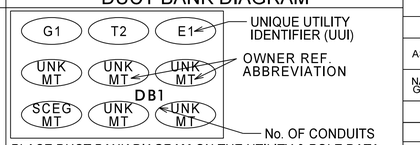
(A) UTILITY OWNER "X"

<C> (A) T1

(B) UTILITY OWNER "Y"

<D> T1 (B)

UTILITY LINES THAT REQUIRE MORE DETAILED INFORMATION ON THE PLAN SHEET CAN BE LABELED WITH THE SUPPLIMENTAL UTILITY LINE LABEL (SUL):



OWNERSHIP CODES WILL BE REFERENCED ON THE TITLE/OWNER SHEET AND THE UTILITY & POLE DATA SHEET.

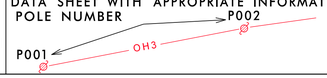
SEWER MANHOLE NUMBERS (SMN)

S001 (S) SANITARY SEWER MANHOLE

DESIGNATE EACH SANITARY SEWER MANHOLE WITH A SEWER MANHOLE NUMBER (SMN). REFERENCE THIS SMN ON THE UTILITY DATA SHEET AND LIST ELEVATIONS.

DUCT BANK DIAGRAM

PLACE DUCT BANK DIAGRAM ON THE UTILITY & POLE DATA SHEET BELOW THE UTILITY & POLE DATA CHART. NOTE THE UUI OF THE DUCT BANK ON THE DIAGRAM. DEPICT THE CORRECT NUMBER OF CONDUITS IN THE DUCT AND THE USAGE OF EACH. MARK EMPTIES (IF KNOWN) WITH OWNER REFERENCE ABBREVIATION AND "MT".



UTILITY INFORMATION TAGS (UIT)

WHEN UTILITY APPURTENANCES NEED DESCRIBING, PLACE A UIT NEXT TO THE CELL OR OUTLINED AREA. PLACE THE INFORMATION ON THE UTILITY DATA SHEET. DESIGNATE THE UTILITY BY THE OWNER NUMBER AND "T001" CODE IN THE "UTILITY" COLUMN. (IE - T2 T001).

(X) T001

UTILITY POLE ID NUMBER (UPIN)

TAG EACH UTILITY POLE WITH A UTILITY POLE ID NUMBER (UPIN) STARTING AT THE BEGINNING STATION. REFERENCE UPIN ON THE UTILITY & POLE DATA SHEET WITH APPROPRIATE INFORMATION.

UTILITY INFORMATION ABBERVIATIONS

EOI	END OF INFORMATION
EORI	END OF RECORDED INFORMATION
AATUR	UTILITY ABANDONED ACCORDING TO UTILITY RECORDS

QUALITY LEVEL DEFINITIONS

Level D. This level information comes solely from existing utility records. It may provide an overall "feel" for the congestion of utilities, but it is often highly limited in terms of comprehensiveness and accuracy. Its usefulness should be confined to project planning and route selection activities.

Level C. This level involves surveying visible aboveground utility facilities (e.g., manholes, valve boxes, posts) and correlating this information with existing utility records. When using this information, it is not unusual to find that many underground utilities have been either omitted or erroneously plotted. Its usefulness, therefore, should be confined to rural projects where utilities are not prevalent, or are not too expensive to repair or relocate.

Level B. This level involves the use of surface geophysical techniques to determine the existence and horizontal position of underground utilities. This activity is called "designating." Two-dimensional mapping information is obtained. This information is usually sufficient to accomplish preliminary engineering goals. Decisions can be made on where to place storm drainage systems, footers, foundations and other design features in order to avoid conflicts with existing utilities. Slight adjustments in the design can produce substantial cost savings by eliminating utility relocations.

Level A. This level involves the use of nondestructive digging equipment at critical points to determine the precise horizontal and vertical position of underground utilities, as well as the type, size, condition, material and other characteristics. This activity is called "locating." It is the highest level presently available. When surveyed and mapped, precise plan and profile information are available for use in making final design decisions. By knowing exactly where a utility is positioned in three dimensions, the designer can often make small adjustments in elevations or horizontal locations and avoid the need to relocate utilities. Additional information (e.g., utility materials, condition, size, soil contamination, paving thickness) also assists the designer and Utility Company in their decisions.

U SHEET - UTILITY COORDINATION LEGEND

YORK COUNTY
SOUTH CAROLINA

US 21 NORTH PHASE 1 & SC 51
POLE DATA SHEET

SCALE: N/A RTE. US 21 DWG. NO. U4D

FOR INFORMATION ONLY

FED. ROAD DIV. NO.	STATE	COUNTY	PROJECT ID	PROJECT NO.	ROUTE NO.	SHEET NO.
3	S.C.	YORK	0042332	1149-004	US 21 SC 51	U5

GENERAL NOTES

THESE PLANS ARE TO BE USED ONLY AS REFERENCE FOR UTILITY RELOCATIONS.

ALL RELOCATIONS ARE APPROXIMATE BASED ON INFORMATION PROVIDED BY THE INDIVIDUAL UTILITY OWNERS.

ALL PROPOSED RELOCATIONS ARE CONSIDERED INCOMPLETE AND THE INDIVIDUAL UTILITY OWNERS MAY REQUIRE ADDITIONAL RELOCATIONS.

ACTUAL FIELD CONDITIONS WILL DICTATE THE PRECISE LOCATION OF THE RELOCATED UTILITY THROUGH COORDINATION BETWEEN THE CONTRACTOR AND THE UTILITY OWNER.

THE CONTRACTOR IS REQUIRED TO CONTACT 811 AS WELL AS THE NON-811 MEMBER UTILITIES THREE DAYS PRIOR TO EXCAVATING ACTIVITIES.
1-888-721-7877

SPECIAL PROVISIONS

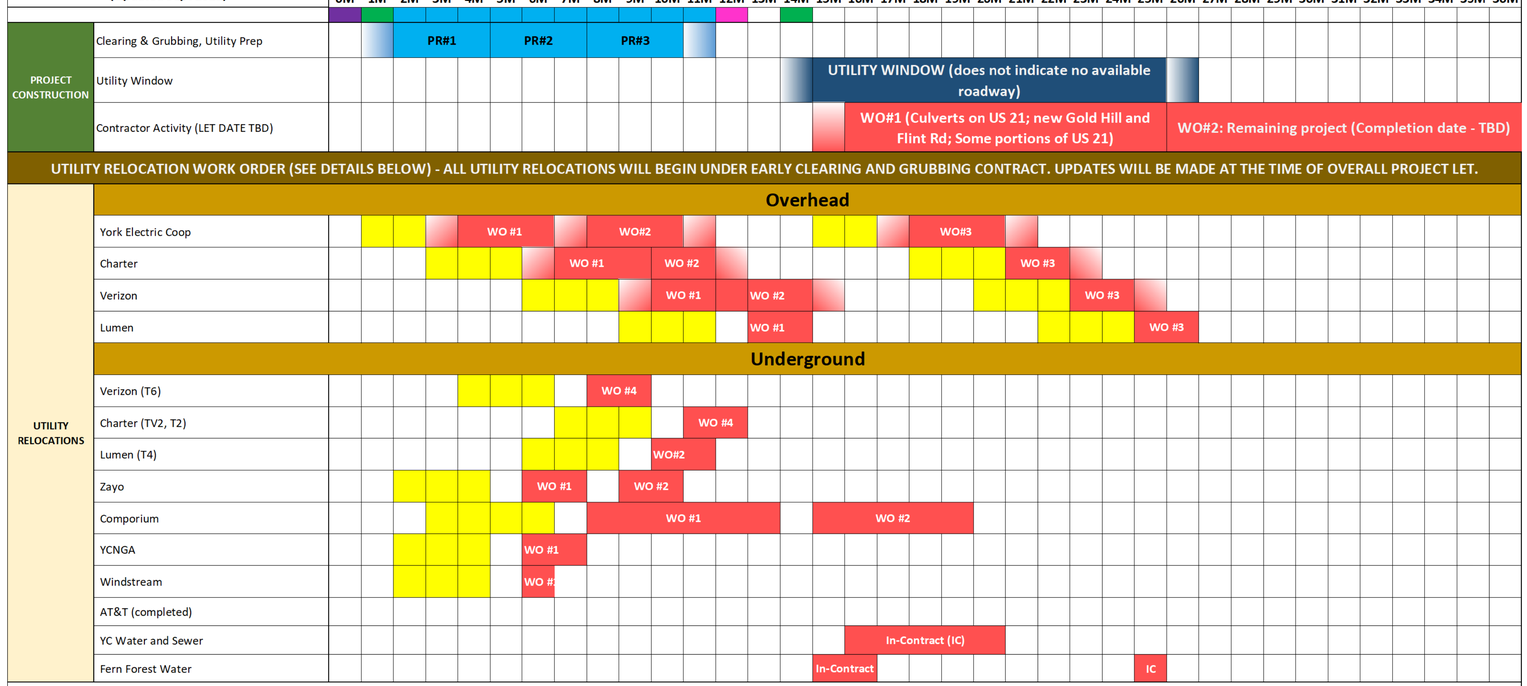
UTILITY STAKING:

CONTRACTOR SHALL BE AWARE ON AS NEEDED BASIS, UTILITIES MAY REQUEST STAKING OF CONSTRUCTION ITEMS AND RIGHT-OF-WAY TO HELP FACILITATE RELOCATIONS AND TO AVOID POTENTIAL CONFLICT WITH ROADWAY CONSTRUCTION AND OTHER UTILITIES.

UTILITY RELOCATION CLEARING SEQUENCE:

UTILITY RELOCATION APPROACH:

IT IS THE INTENTION OF THE UTILITIES TO RELOCATE ACCORDING TO THE FOLLOWING CONSTRUCTION SEQUENCE. THE CLEARING CONTRACTOR SHALL CLEAR AND GRUB ACCORDING TO THE PRIORITY SHOWN IN CHART.



IT IS THE INTENT THAT UTILITIES WILL START WORKING IN ALL AVAILABLE LOCATIONS, WHERE AND WHEN POSSIBLE. EXISTING UTILITIES WILL REMAIN ACTIVE UNTIL ALL NEW FACILITIES ARE INSTALLED AND CUT OVER.

KEY

- notifications (permitting, procurement, scheduling)
- active relocation/ construction activity
- some activity
- no activity
- Project Bid (Early C&G only)
- NTP
- Contractor on-site for C&G operations
- Utility Window
- Project Bid (TBD - For visual purpose only)

**THIS BAR CHART IS FOR INFORMATION ONLY. THE PURPOSE IS TO VISUALLY SHOW THE ORDER OF UTILITY RELOCATIONS IN RELATION TO OTHER CONSTRUCTION ACTIVITY AND NEEDS. IT IS THE CONTRACTOR'S RESPONSIBILITY TO VERIFY UTILITY RELOCATION STATUS. CONTRACTOR ACTIVITY FOR THE PROJECT WILL EXTEND FURTHER THAN WHAT IS SHOWN.

US 21/ SC 51 Widening
(Updated Sept 2023)

WORK AREAS, CONTRACTOR ACTIVITY, AND PRECEDING RELOCATION REQUIRED FOR UTILITY RELOCATION

York Electric Cooperative (E1):
WO #1: SC 51 (need clearing and new alignment graded)
WO #2: Old Nations to SC 51
WO#3: Remaining US 21 (require fill efforts from prime)

Charter (TV2, T2):
WO #1: SC 51 (need clearing/grading & YEC OH)
WO #2: Old Nations to SC 48 (need clearing/grading & YEC OH)
WO #3: Remaining US 21 (need YEC OH)
WO #4: US 21 - UG from Sta 45+00 to 72+00

Verizon (T6):
WO #1: SC 51 (need clearing/grading & YEC OH)
WO #2: Old Nations to SC 48 (need clearing/grading & YEC OH)
WO #3: Remaining US 21 (need YEC OH)
WO #4: US 21 - UG from Sta 45+00 to 61+00

Zayo (T5):
WO #1: Gold Hill to SC 51 & SC 51 (need clearing/grading)
WO #2: SC 460 to Gold Hill (need clearing/grading)

Comporium (T1):
WO #1: Gold Hill to SC 51 & SC 51 (need clearing/grading)
WO #2: SC 460 to Gold Hill (need clearing/grading)

AT&T (T3):
Work is complete for Encrochment #A029Y30

Windstream:
WO #1: Adjust as needed; 1 month notification

Lumen (T4):
WO #1: Old Nations to end of SC 51 (OH) (need YEC & Tele OH
WO #2: Gold Hill to Old Nations (UG only) (need C&G)
WO #3: All remaining OH (need YEC OH & Other OH Telecoms

YCNGA (G1):
WO #1: SC 51 (need clearing & grubbing)
WO#2: All remaining relocations

York County Water/Sewer (W1/SS1):
In-contract

Fern Forest Water (T2):
In-contract (2 parts)

Clearing Priorities:
PR#1:
C&G SC51 and Flint Hill Road (new and existing); Includes rough grading new alignments of existing ground
PR#2:
C&G RT/LT Side from Gold Hill to SC 43 and cut from Sta 44+00 to 54+00 LT on US 21; Includes rough grading for new alignment for Gold Hill of existing ground
PR#3:
Remaining project

RE: Project No. P0042332/11149-004 – US21/SC51
York Co: Relocation Package – Lumen

Dear Mr. Moss –

Below you will find a brief description of the proposed work and submittal explanation. Please refer to Lumen's individual plans for details, or this document for plan status.

Scope of Work and Package Contents

Relocation Package

- Utility Agreement
- Detailed Cost Estimate
- Encroachment Permit Application
- Relocation Plans and associated U-sheets

Scope of Work Summary

Location	Utility Type	Scope of Work	Cost*
US21	Underground communication	Install new underground communication cables from 62+00 to 68+00	York County
US21	Overhead communication attached to York Electric	Install new overhead cables attached to existing York Electric poles from Sta 72+00 to 116+00	York County
SC51	Overhead communication attached to York Electric	Install new overhead cables attached to existing York Electric poles from Sta 306+00 to 339+00	York County

It is STV's recommendation that this relocation package be approved and proceed to the formal agreement.

Should you have any additional questions or comments, please feel free to call me (843-207-2031) or email me at natalie.roumillat@stvinc.com.

Sincerely,

N. Oriana Roumillat
N. Oriana Roumillat, P.E.
Utility Coordinator

Agreement # _____

UTILITY AGREEMENT

York County Project No. 11149-004 Route (or Road No.) US 21 NORTH AND SC 51

This Agreement made this _____ day of _____, 20_____ by and between

York County, hereinafter called "County" and the utility company

Level 3 Communications, LLC

hereinafter called "Company."

DEFINITIONS

Plans – detailed drawings or diagrams showing the stages for the relocation project

Schedule – the estimated number of days to complete each stage of the relocation project

Cost Estimate – the approximate cost of the relocation project

Actual Cost – the amount the Company pays to complete the relocation project

W I T N E S S E T H:

1. It is mutually agreed by and between the parties hereto that the Company shall perform or cause to be performed, the following work to its utility property facilities as shown on the Plans and Cost Estimate attached and incorporated into this agreement.

General description:

UG & Aerial 144ct &12ct FOC in conflict with road widening project taking place along HWY 21 and HWY 51 in Rock Hill SC.
New Capex required to support this reimbursable project, nod ark fiber. This project is being driven by York County SC as part of the Pennis for Progress program part of the Road widening project. Requesting Lumen to relocate our UG cable to the new poles.

2. The Company hereby agrees to relocate its utility facilities in conflict with highway construction in accordance with the provisions set forth in the Federal Highway Administration's FAPG 23 C.F.R. § 645A and the SCDOT's "A Policy for Accommodating Utilities on Highway Rights-of-Way." The Cost Estimate is:

TOTAL $ 127,015.11 MC

County Share $ 127,015.11 Company Share $ 0

(a) The Company ☑ does have the right of occupancy in its existing location by reason of holding the fee, an easement, or other real property interest or ☐ does not and is in the existing right of way by encroachment.

(b) This section of line has been in service for approximately Six years.

(c) Such work as is necessary to relocate, alter, or maintain the facility will be done in such a manner to minimize interference with or endangering the safety of the general public in their use of the roads as a highway. Traffic control and signing will be in accordance with "The Federal Highway Administration's Manual on Uniform Traffic Control Devices for Streets and Highways".

3. The Company shall designate an employee or agent who possesses knowledge of the relocation project and authority to make decisions on behalf of the Company to serve as the Designated Contact Person. The Designated Contact Person shall attend all bi-weekly construction meetings or ensure that any temporary designee attending a bi-weekly meeting possesses knowledge of the relocation project and authority to make decisions on behalf of the Company. The County shall communicate with the Company about the relocation project through the Designated Contact Person. The Company shall notify the County in writing of any changes to the Designated Contact Person within seven calendar days of the change. The Company designates the following person as the Designated Contact Person for this project:

Name: Wanita Brenes
Phone Number: 910-551-8838
Email: Wanita.Brenes@lumen.com

4. The County shall provide the Company written notice, by email, of the date the County intends to begin advertising the bid. The Company shall update its Schedule within forty five days after receiving written notice of the bid advertisement. The County shall provide the Company notice of the preconstruction meeting, which the Company's Designated Contact Person shall attend.

5. The Company shall begin relocation project work promptly upon receiving authorization in writing, by email, from the County and complete the work in accordance with the schedule and as promptly as is practicable. Within ten calendar days of receiving written authorization, the Company shall provide notice to the County of the date on which work is expected to begin.

6. The Company will perform the work provided for in this agreement by the method checked below, in accordance with the provisions FAPG 23 CFR § 645.115:

( ) BY COMPANY'S REGULAR FORCES

(ı) BY CONTRACT: (State one of recognized reasons for necessity of performing work in this manner)

Level 3 Communications, LLC conducts all construction work and road move projects in this manner, as the company does not own or maintain construction related equipment.

If the Company, subject to prior approval, proposes to contract a portion of or all of the work covered by this agreement, then the Company must submit a list of items in the Cost Estimate that will be accomplished by contract. Where the Company elects to solicit competitive bids from a list of qualified contractors rather than through advertising in a publication, the names and addresses of those contractors must be written on the Cost Estimate or furnished to the County in advance of the Company's solicitation of bids.

7. The County will reimburse the utility company for costs incurred for work performed in accordance with the Plans and Cost Estimate. The Company must provide accurate records supporting all costs incurred and submitted for reimbursement. The method of developing the relocation costs shall be one of the following alternatives.

☑ Actual and related direct costs accumulated in accordance with a work order accounting procedure prescribed by the applicable Federal or State regulatory body.

☐ Unit costs, such as broad gauge units of property, as used in own operations. (This method must have prior approval.)

The County will not pay for any components or items considered to be an upgrade unless such upgrades are required by applicable law, necessitated by the relocation, or proven to be more cost efficient.

8. All work performed by the Company shall be performed according to the plans and estimates approved by the County. The County is not obligated to reimburse the Company for any work not included in the Plans or Cost Estimate. The County Engineer may approve reimbursement for Actual Costs or additional work not included in the Plans or Cost Estimate if (1) the Actual Costs or additional work is necessary for the relocation project and (2) the Actual Costs or additional work do not exceed the Cost Estimate by more than 50%. The Company must seek and receive prior written approval before incurring costs for additional work.

9. The Plans must show the existing facilities, permanent changes to be made, and the stages by which these changes are to be accomplished. The Schedule must estimate the time required for each stage.

10. Periodic progress billings of incurred costs may be made by the Company to the County not to exceed monthly intervals and amounting to at least $2500.00; however, total progress billing payments shall not exceed the Cost Estimate or approved Actual Cost.

Upon completion of the work and no later than three months thereafter, the Company shall, at the earliest date practicable, furnish the County with five (5) copies of its final and complete billing of all costs incurred in connection with the work performed hereunder, such statement to follow as closely as possible the order of the items contained in the Cost Estimate. The totals for labor, overhead construction cost, travel expense, transportation, equipment, material and supplies, handling cost, and other services shall be shown in such a manner as will permit ready comparison with the Plans and Cost Estimates. Items of materials shall be itemized where they represent major components.

Credit shall be given for usable materials recovered from permanent or temporary installations. The final billing shall show the description and site of the project, the date on which the first work was performed; or, if preliminary engineering or right-of-way items are involved, the date on which the earliest item of billed expense was incurred, the completion date and the location where the records and accounts billed can be audited. The Company shall make adequate reference in the billing to its records, accounts, and other documents. Contractors and any subcontractors are to maintain all books, documents, papers, accounting records, and other evidence pertaining to costs incurred and to make such materials available at their respective offices at all reasonable times during the contract for inspection by the County or any authorized representatives of the County. Copies shall be furnished if requested.

Final billings submitted by the Company shall carry a statement certifying that all items claimed have been reviewed and are in conformity with the provisions of the agreement, that credits have been given for all salvaged materials as required, and that all contractor's bills have been paid in full. This statement shall be signed by an authorized representative of the Company.

In the event a final and complete billing has not been received by the County three months following the completion of work and the Company has not during that period demonstrated to the County's satisfaction a hardship in completing that billing, the County may, in its sole discretion, consider the last payment made to be the final payment due under this agreement.

11. An extreme delay means the Company failed to begin relocation project work after receiving notice from the County to begin work and caused a thirty-day delay to the entire road construction project. The County shall notify the Company in writing if the Company causes an extreme delay. The Company shall have thirty calendar days from the date of the notice to stop the delay and expeditiously work to complete the relocation project. If the Company fails to stop the delay within thirty days after receiving notice of the delay, the County may require the Company to pay the costs associated with the delay of the project. The costs may include contractor remobilization costs, traffic control costs for the time of the delay, and any other costs attributable to the Company’s delay. The County may deduct these costs from the retainage or any reimbursement owed to the Company. Should the costs of the delay exceed the amount of retainage or reimbursement owed to the Company, the County may invoice the Company for the costs of the delay, and the Company shall pay any invoices for the costs associated with extreme delays by the Company. The County may pursue any remedy available in law or equity to recover the costs of the delay.

Should a substantial hardship prevent the Company from performing the relocation project work and cause an extreme delay, the Company may apply in writing for a waiver excusing all or a portion of the delay and waiving all or a portion of the costs associated with the extreme delay. In its application, the Company shall state the cause of the delay and the time in which the Company shall resolve the hardship and continue with the relocation project work. The County Engineer shall determine whether to grant the waiver and what portion of the costs to waive.

Should a dispute arise about the cost levied upon the Company for an extreme delay, the County and the

Company agree participate in pre-litigation mediation and agree to diligently work in good faith to resolve any disputes associated with the costs charged to the Company for extreme delays. The parties shall select a mediator approved by both parties and set forth any resolutions in writing signed by both parties.

Should the parties fail to reach an agreement through pre-litigation mediation, the parties may seek a resolution for the dispute through the Court of Common Pleas located in York County, South Carolina, or the United States District Court for the State of South Carolina. This agreement shall be governed exclusively by the laws of the State of South Carolina without giving effect to its conflicts of law provisions.

12. The County shall have the right to inspect all recovered materials from the permanent facility prior to disposal by sale or scrap. This requirement will be satisfied by the Company giving notice to the County of the time and place the materials will be available for inspection. This notice is the responsibility of the Company and it may be held accountable for full value of materials disposed of without notice. The Company shall furnish a listing on final billings of major items not eligible for salvage credit and reasons therefore.

13. The Company will abide by the contract cost principles as set forth in FAPG 23 CFR 645A.

14. The Company will not participate directly or indirectly in any practice that subjects persons to discrimination because of their race, color, religion, sex, or national origin.

Project Location

Primary County: York

County	Road Name
York	Highway 21 Byp N (US 21)
York	Springhill Farm Rd (S-48)
York	Gold Hill Rd (S-98)

1. Type of Encroachment: COMMUNICATIONS (Cable TV, Telephone & Other)

COMMUNICATIONS RELOCATIONS IN LIEU OF SCDOT PROJECT SC51/US21. LUMEN WILL RELOCATE EXISTING BURIED CABLE, CONDUIT AND HH'S BASED OFF OF NEW ROADWAY RIGHT OF WAY.

2. Description of Location:

ALONG US21 FROM SPRINGDALE TO US 51, FORT MILL SC.

(Attach sketch indicating roadway features such as: pavement width, shoulder width, sidewalk and curb and gutter location, significant drainage structure, north arrow, right of way width, and location of the proposed encroachment with respect to the roadway centerline and the nearest intersecting road on the State system.)

Customer Agreement

3. The undersigned Applicant hereby requests SCDOT to permit encroachment on SCDOT right of way as described herein. It is expressly understood that every encroachment, if and when constructed, shall be installed in accordance with the sketch attached hereto and made a part hereof. Applicant agrees to comply with and be bound by SCDOT's 'A Policy for Accommodating Utilities on Highways Rights of way', 'Standard Specifications for Highway Construction', the 'General Provisions' and 'Special Provisions', attached hereto or made a part hereof by reference, during the installation, operation and maintenance of said encroachment within SCDOT's right of way.

DISCHARGES OF STORM WATER AND NON-STORM WATER: Work within State Highway right of way shall be conducted in compliance with all applicable requirements of the National Pollutant Discharge Elimination System (NPDES) permit(s) issued to SCDOT, to govern the discharge of storm water and non-storm water from SCDOT properties. Work shall also be in compliance with all other applicable Federal, State and Local laws and regulations, and with SCDOT's Encroachment Permits Manual and the encroachment permit. The encroachment permit will not be issued until Applicant has received an NPDES construction permit from SC Department of Health and Environmental Control.

Applicant and Permittee agrees to comply with all current SCDOT Standards Specifications for Highway Construction including all Supplemental Technical Specifications. Applicant and Permittee hereby further agrees, and binds his/her/its heirs, personal representatives, successors and assigns, to assume any and all liability for accidents or injuries to persons, or damage to property, including the highway and all SCDOT facilities in the right of way, that may be caused by the construction, maintenance, use, moving or removing of the physical appurtenances contemplated herein, and the applicant agrees to indemnify and hold SCDOT harmless from and against any and all claims for personal injury and/or property damage, including attorney fees and costs, which may be sustained by reason of the construction,

maintenance or existence of said encroachment on the SCDOT's right of way.

General Provisions

Application for Encroachment Permit
General Provisions

1. **DEFINITIONS: The word "Permittee" used herein shall mean the name of the person, firm, or corporation to whom this permit is addressed, his, her, its, heirs, personal representatives, successors and assigns. The word "DEPARTMENT" shall mean the South Carolina Department of Transportation.**
2. **NOTICE PRIOR TO STARTING WORK: Before starting the work contemplated herein within the limits of the highway right of way, the Department's Resident Maintenance Engineer in the county in which the proposed work is located shall be notified 24 hours in advance so that he may be present while the work is under way.**
3. **PERMIT SUBJECT TO INSPECTION: This permit shall be kept at the site of the work at all times while said work is under way and must be shown to any representative of the Department or law enforcement officer on demand.**
4. **PROTECTION OF HIGHWAY TRAFFIC: The applicant shall be responsible for the protection of the highway traffic at all times during the construction, maintenance, removing or moving of the encroachment permitted herein. Detours, barricades, warning signs and flagmen, as necessary, shall be provided by and at the expense of the Permittee and shall be in accordance with the "Manual on Uniform Traffic Control Devices" (MUTCD). The work shall be planned and carried out so that there will be the least possible inconvenience to the motoring public. The Permittee agrees to observe all rules and regulations of the Department while carrying on the work contemplated herein and take all other precautions that circumstances warrant.**
5. **STANDARDS OF CONSTRUCTION: All work shall conform to the Department?s standards of construction and shall be performed in a workman-like manner. The applicant shall make adequate provisions for maintaining the proper drainage of the highway as it may be affected by the encroachment permitted herein. All work shall be subject to the supervision and satisfaction of the Department.**
6. **FUTURE MOVING OF PHYSICAL APPURTENANCES: If, in the opinion of the State Highway Engineer, it should ever become necessary to move or remove the physical appurtenances, or any part thereof contemplated herein, on account of change in location of the highway, widening of the highway, or for any other sufficient reason, such moving shall be done on demand of the Department at the expense of the Permittee.**
7. **RESTORATION OF HIGHWAY FACILITIES UPON MOVING OR REMOVING OF PHYSICAL APPURTENANCES: If, and when, the physical appurtenances contemplated herein shall be moved or removed, either on the demand of the Department or at the option of the Permittee, the highway and facilities shall immediately be restored to their original condition at the expense of the Permittee.**
8. **COSTS: All work in connection with the construction, maintenance, moving or removing of the physical appurtenances contemplated herein shall be done by and at the expense of the Permittee.**
9. **ADDITIONAL PERMISSIONS:**
   (a) It is distinctly understood that this permit does not in any way grant or release any rights lawfully possessed by the abutting property owners. The Permittee shall secure any such rights, as necessary, from said abutting property owners.

(b) The Permittee shall be responsible for obtaining all other approvals or permits necessary for installation of the encroachment from other government entities.

(c) There shall be no excavation of soil nearer than two feet to any public utility line or appurtenant facility except with the consent of the owner thereof, or except upon special permission of this Department after an opportunity to be heard is given the owner of such line or appurtenant facility.

10. **ADDITIONAL WORK PERFORMANCE:**

(a) All crossings over the highway shall be constructed in accordance with "Specifications for Overhead Crossings of Light and Power Transmission Lines and Telegraph Lines over each other and over Highway Rights of Way in South Carolina," as approved by the Public Service Commission of South Carolina and effective as of date of this permit.

(b) All tunneling, boring, or jacking shall be done in such a way as not to disturb the highway surfacing.

(c) No pavement shall be cut unless specifically authorized herein.

(d) No excavation shall be nearer than three feet to the edge of pavement unless specifically authorized herein.

(e) Underground facilities will be located at minimum depths as defined in the "Utility Accommodations Manual" for the transmittant, generally as follows: 4 feet minimum for hazardous or dangerous transmittant, 3 feet minimum for other lines. The Department may approve shallower depths if adequate protection is provided. Such approval must be obtained in writing.

(f) Service and other small diameter pipes shall be jacked, driven, or otherwise forced underneath the pavements on any surfaced road without disturbing the pavement. The section under the highway pavement and within a distance of three (3) feet on either side shall be continuous without joints.

11. **ACCESS:**

(a) Permittee is responsible for maintaining reasonable access to private driveways during construction.

(b) It is expressly provided that, with respect to any limited access highway, the Permittee shall not have or gain access from the main traveled way of the highway, or the on or off ramps to such facility, except upon approval by the Department.

12. **DRIVEWAYS:**

(a) The existing crown of the highway shall be continued to the outside shoulder line of the highway.

(b) If the driveway or approach is concrete pavement, the pavement shall be constructed at least 6 inches thick and with a minimum of class 2500 concrete. There shall be a bituminous expansion joint, not less than 3/4 inches in thickness, placed between the highway paving and the paving of the approach for the full width of the approach.

13. **BEAUTIFICATION:**

(a) All trees, plants, flowers, etc. shall be placed in accordance with the provisions specifically stipulated herein.

(b) All trees, plants, flowers, etc. shall be maintained by, and at the expense of, the Permittee and the provisions of this permit shall become null and void, if and when said Permittee ceases to maintain aid trees, plants, flowers, etc.

14. **AS-BUILT PLANS:**

(a) The applicant shall provide the Department with survey-quality as-built plans in accordance with the requirements set forth in the Department's "A Policy for Accommodating Utilities on Highway Rights of Way".

15. **COMPLETE STREETS:**

Reference Departmental Directive 28, "Complete Streets". For encroachment permit types that require a Traffic Impact Study (TIS), the applicant shall consider the inclusion of walking, bicycling, and transit accommodations within the scope of the encroachment. The applicant shall review walking, bicycling, and transit plans from Metropolitan Planning Organizations (MPOs), Councils of Government (COGs), and regional transit providers to determine the scope of accommodations for complete streets. Coordination with the District Permit Engineer is required to determine if the inclusion of walking, bicycling, and transit accommodations are conducive for implementation based on the scope of the encroachment.

LOCATION: US-21, FORT MILL, SC
DRAWING NAME: US-21.dwg

CONFIDENTIAL/PROPRIETARY

GENERAL NOTES

1.Contractor must obtain locates prior to disturbing the ground.

2.Contractor must have a copy of the approved permit from the appropriate agency on the jobsite at all times.

3.All cable will be placed at standard minimum depth. (Level 3 standard is 36" deep unless otherwise directed by a Level 3 representative.)

4. Any landscaping will be replaced to equal or better than that which existed prior to work.

5.Project site will be properly secured prior to the end of each day.

6.All work is to be in accordance with all authorities having jurisdiction in the work zone.

7.Contractors are advised to contact Level 3 for any additional information or clarification concerning scope of work or the requirements necessary for project completion.

8.Contractor is responsible to field verify all dimensions, quantities and existing conditions prior to construction. If a significant change to the running line is needed, please contact your Level 3 representative before proceeding.

9.Before construction begins, contractor shall take appropriate precautions to avoid any potential obstructions prior to proceeding with work.

10.No construction on private property will commence until approval is given by the appropriate Level 3 employee.

11.Contractor shall not proceed with work until they have received a Purchase Order and have been directed to do so by an authorized Level 3 representative.

12.Contractor shall not exceed the Purchase Order value without authorization in writing from the appropriate Level 3 representative.

13.As-Builts will be required for each project including cable footage sequentials at every access point, slack loop, splice location, pole and termination point. Contractor should also provide notes of all changes in depths, running lines, mh/hh locations, and any other applicable notes to depict the work that took place. NOTE: All major changes need to be pre-approved by an authorized Level 3 employee prior to starting the work.

CAUTION: GRADE CUTS RANGE FROM 0'–18' AND FILLS RANGE FROM 0'–14' GRADE CUTS AND FILLS NEED TO BE STAKED IN FIELD TO OBTAIN 48" MIN DEPTH FROM FINAL GRADE

CAUTION: RETAINER WALLS ARE BEING BUILT IN SEVERAL SECTIONS VERIFY THAT FIBER/CONDUIT DEPTHS WILL NOT BE A CONFLICT WITH CONSTRUCTION OF WALL. DEPTHS ARE NOTED FOR THESE SECTIONS WITH STATION REFERENCES ON PRINTS. DEPTH BASED AT 3' BELOW WALL DEPTHS.

General Construction Notes

The following construction notes are to be placed on a plan sheet for all construction plans submitted.

1. Contractor is responsible for locating all existing utilities prior to start of construction.
2. All erosion control devices shall be constructed and maintained in accordance with the most current standards of the Land Quality Section of the NCDENR.
3. As a minimum requirement, all graded areas not under pavement and within the right-of-way and/or easements shall be prepared, fertilized and limed, seeded, and mulched immediately upon completion of construction.
4. All work must carry a one-year warranty to cover all defects in materials and workmanship.
5. The most current editions of The North Carolina Department of Transportation Standard Specifications for Roads and Structures and The North Carolina Department of Transportation Roadway Standard Drawings will govern all roadway repair unless otherwise specified herein.
6. All subgrade under paved areas, curb and gutter, sidewalk, and roadway shoulders shall be compacted to at least 95% of the maximum dry density as determined by AASHTO T99 and the NCDOT. The final 12" of subgrade under paved areas and under curb and gutter shall be compacted to 100%.
7. All expansion joints for concrete to be sealed with silicone or polyurethane per NCDOT specifications. Hot applied joint sealer shall not be used. Color must be gray or a color that matches the concrete (not black).
8. Sidewalks shall be installed in the thicknesses as follows:
   a. Residential: 4" thick
      6" thick from PC to PT at intersections including HCR.
      6" thick across all driveways
   b. Commercial: 6" thick
   c. Industrial: 6" thick
      8" thick across all driveways
9. All concrete shall be a minimum of Class A (3000 psi). Class B (2500 psi) shall not be used.

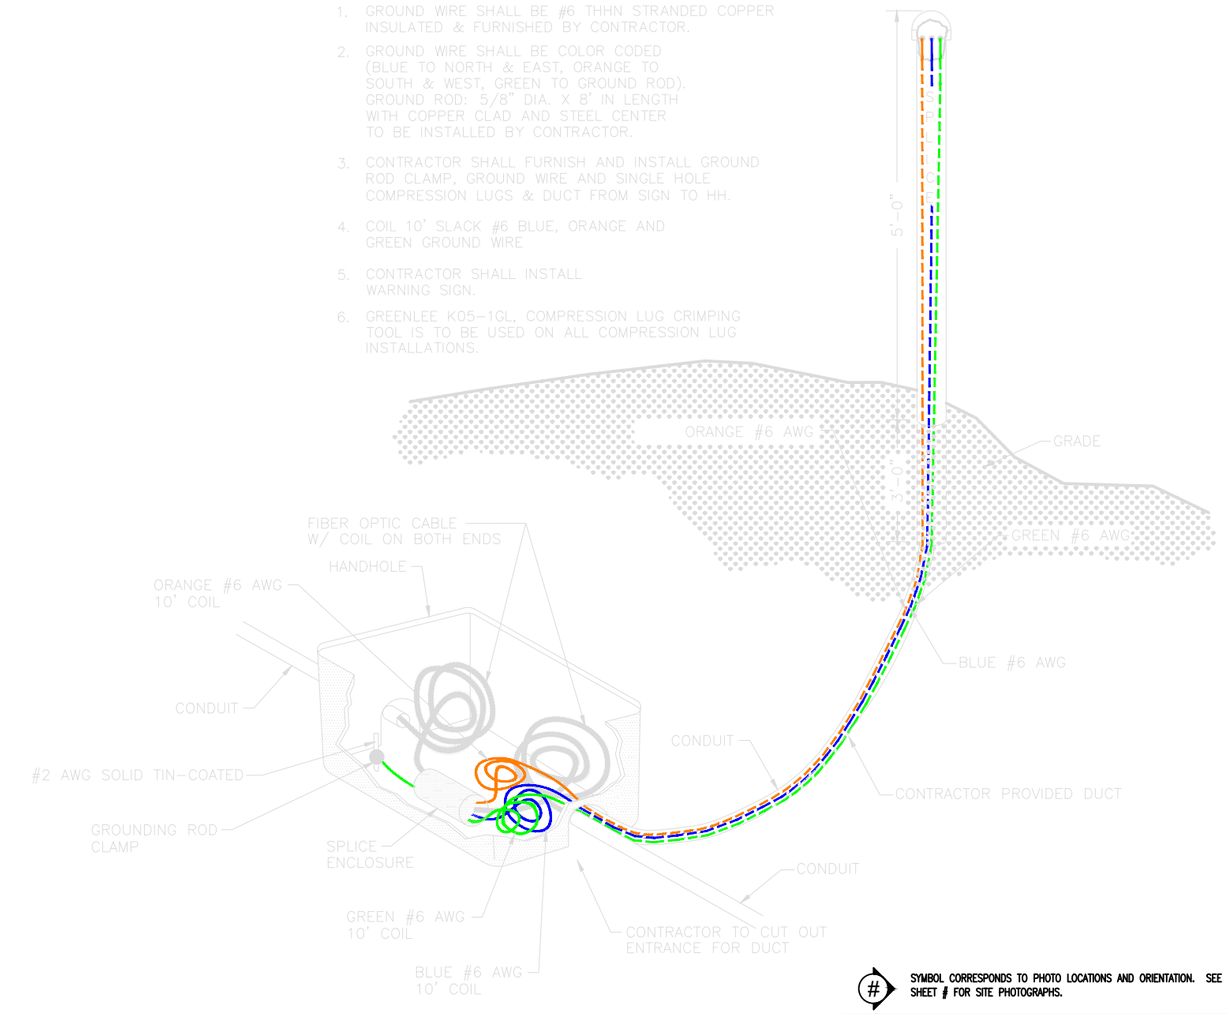
SPLICE POINT



1. INSTALL SPLICE CLOSURE PER DIRECTIONS.
2. USE BULLET BONDS AND METAL BRAID TO CONNECT CABLE SHEATHS TO INTERNAL LUG.
3. CONNECT SHEATH TERMINATION KIT(S) WITH QUICK DISCONNECT TO THE EXTERIOR LUG(S) AND #6 WIRE (MARKED WITH BLUE OR ORANGE HEAT SHRINK) PER KIT DIRECTIONS. USE PROPER CRIMP DISCONNECT TO WIRE. NoOx ALL CONNECTIONS.
4. PRESSURE TEST THE CLOSURE TO HOLD 10 PSI AIR.
5. INSTALL GROUND ROD INSIDE THE VAULT ASSEMBLY AWAY FROM THE FIBER CABLE.
6. CLAMP #6 GREEN WIRE TO THE GROUND ROD NoOx ALL CONNECTIONS.
7. RUN THE 3 (EAST, GROUND AND WEST) #6 WIRES THROUGH HDPE, INSIDE THE LEVEL(3) MARKER UP TO THE ACT ISOLATOR.
8. ATTACH THE SINGLE HOLE COMPRESSION LUGS TO #6 WIRES.
9. ATTACH THE #6 WIRES TO ACT ISOLATOR FOLLOWING THE DIRECTIONS INCLUDED WITH THE ISOLATOR. NoOx ALL CONNECTIONS.

SPLICE WARNING SIGN INSTALLATION

NOTES:

1. GROUND WIRE SHALL BE #6 THHN STRANDED COPPER INSULATED & FURNISHED BY CONTRACTOR.
2. GROUND WIRE SHALL BE COLOR CODED (BLUE TO NORTH & EAST, ORANGE TO SOUTH & WEST, GREEN TO GROUND ROD). GROUND ROD: 5/8" DIA. X 8' IN LENGTH WITH COPPER CLAD AND STEEL CENTER TO BE INSTALLED BY CONTRACTOR.
3. CONTRACTOR SHALL FURNISH AND INSTALL GROUND ROD CLAMP, GROUND WIRE AND SINGLE HOLE COMPRESSION LUGS & DUCT FROM SIGN TO HH.
4. COIL 10' SLACK #6 BLUE, ORANGE AND GREEN GROUND WIRE
5. CONTRACTOR SHALL INSTALL WARNING SIGN.
6. GREENLEE K05-1GL, COMPRESSION LUG CRIMPING TOOL IS TO BE USED ON ALL COMPRESSION LUG INSTALLATIONS.

Agreement # _____

UTILITY AGREEMENT

York County Project No. 11149-004 Route (or Road No.) US 21 North and SC 51

This Agreement made this _____ day of _____, 20_____ by and between

York County, hereinafter called "County" and the utility company

MCIMETRO ACCESS TRANSMISSION SERVICES LLC

hereinafter called "Company."

DEFINITIONS

Plans – detailed drawings or diagrams showing the stages for the relocation project

Schedule – the estimated number of days to complete each stage of the relocation project

Cost Estimate – the approximate cost of the relocation project

Actual Cost – the amount the Company pays to complete the relocation project

W I T N E S S E T H:

1. It is mutually agreed by and between the parties hereto that the Company shall perform or cause to be performed, the following work to its utility property facilities as shown on the Plans and Cost Estimate attached and incorporated into this agreement.

General description:

Relocation of existing Company (MCImetro) facilities along US21, between Springfield Pkwy and Springhill Farm Rd and along SC51, between US21 and Mecklenburg/York County line.

2. The Company hereby agrees to relocate its utility facilities in conflict with highway construction in accordance with the provisions set forth in the Federal Highway Administration's FAPG 23 C.F.R. § 645A and the SCDOT's "A Policy for Accommodating Utilities on Highway Rights-of-Way." The Cost Estimate is:

TOTAL $ 377,642.26

County Share $ 377,642.26 Company Share $ 0

(a) The Company ☐ does have the right of occupancy in its existing location by reason of holding the fee, an easement, or other real property interest or ☒ does not and is in the existing right of way by encroachment.

(b) This section of line has been in service for approximately 5 years.

(c) Such work as is necessary to relocate, alter, or maintain the facility will be done in such a manner to minimize interference with or endangering the safety of the general public in their use of the roads as a highway. Traffic control and signing will be in accordance with "The Federal Highway Administration's Manual on Uniform Traffic Control Devices for Streets and Highways".

3. The Company shall designate an employee or agent who possesses knowledge of the relocation project and authority to make decisions on behalf of the Company to serve as the Designated Contact Person. The Designated Contact Person shall attend all bi-weekly construction meetings or ensure that any temporary designee attending a bi-weekly meeting possesses knowledge of the relocation project and authority to make decisions on behalf of the Company. The County shall communicate with the Company about the relocation project through the Designated Contact Person. The Company shall notify the County in writing of any changes to the Designated Contact Person within seven calendar days of the change. The Company designates the following person as the Designated Contact Person for this project:

Name: Steven Ruiz
Phone Number: 704-692-3142
Email: steven.ruiz@verizon.com

4. The County shall provide the Company written notice, by email, of the date the County intends to begin advertising the bid. The Company shall update its Schedule within forty five days after receiving written notice of the bid advertisement. The County shall provide the Company notice of the preconstruction meeting, which the Company's Designated Contact Person shall attend.

5. The Company shall begin relocation project work promptly upon receiving authorization in writing, by email, from the County and complete the work in accordance with the schedule and as promptly as is practicable. Within ten calendar days of receiving written authorization, the Company shall provide notice to the County of the date on which work is expected to begin.

6. The Company will perform the work provided for in this agreement by the method checked below, in accordance with the provisions FAPG 23 CFR § 645.115:

( ) BY COMPANY'S REGULAR FORCES

(I) BY CONTRACT: (State one of recognized reasons for necessity of performing work in this manner)

The underground portion of the Company's relocation will be completed by horizontal directional bore and its aerial relocation will be completed by placing 10m strand and over lashing our Fiber Optic Cable by its contractor TEP OPCO LLC

If the Company, subject to prior approval, proposes to contract a portion of or all of the work covered by this agreement, then the Company must submit a list of items in the Cost Estimate that will be accomplished by contract. Where the Company elects to solicit competitive bids from a list of qualified contractors rather than through advertising in a publication, the names and addresses of those contractors must be written on the Cost Estimate or furnished to the County in advance of the Company's solicitation of bids.

7. The County will reimburse the utility company for costs incurred for work performed in accordance with the Plans and Cost Estimate. The Company must provide accurate records supporting all costs incurred and submitted for reimbursement. The method of developing the relocation costs shall be one of the following alternatives.

[x] Actual and related direct costs accumulated in accordance with a work order accounting procedure prescribed by the applicable Federal or State regulatory body.

[ ] Unit costs, such as broad gauge units of property, as used in own operations. (This method must have prior approval.)

The County will not pay for any components or items considered to be an upgrade unless such upgrades are required by applicable law, necessitated by the relocation, or proven to be more cost efficient.

8. All work performed by the Company shall be performed according to the plans and estimates approved by the County. The County is not obligated to reimburse the Company for any work not included in the Plans or Cost Estimate. The County Engineer may approve reimbursement for Actual Costs or additional work not included in the Plans or Cost Estimate if (1) the Actual Costs or additional work is necessary for the relocation project and (2) the Actual Costs or additional work do not exceed the Cost Estimate by more than 50%. The Company must seek and receive prior written approval before incurring costs for additional work.

9. The Plans must show the existing facilities, permanent changes to be made, and the stages by which these changes are to be accomplished. The Schedule must estimate the time required for each stage.

10. Periodic progress billings of incurred costs may be made by the Company to the County not to exceed monthly intervals and amounting to at least $2500.00; however, total progress billing payments shall not exceed the Cost Estimate or approved Actual Cost.

Upon completion of the work and no later than three months thereafter, the Company shall, at the earliest date practicable, furnish the County with five (5) copies of its final and complete billing of all costs incurred in connection with the work performed hereunder, such statement to follow as closely as possible the order of the items contained in the Cost Estimate. The totals for labor, overhead construction cost, travel expense, transportation, equipment, material and supplies, handling cost, and other services shall be shown in such a manner as will permit ready comparison with the Plans and Cost Estimates. Items of materials shall be itemized where they represent major components.

Credit shall be given for usable materials recovered from permanent or temporary installations. The final billing shall show the description and site of the project, the date on which the first work was performed; or, if preliminary engineering or right-of-way items are involved, the date on which the earliest item of billed expense was incurred, the completion date and the location where the records and accounts billed can be audited. The Company shall make adequate reference in the billing to its records, accounts, and other documents. Contractors and any subcontractors are to maintain all books, documents, papers, accounting records, and other evidence pertaining to costs incurred and to make such materials available at their respective offices at all reasonable times during the contract for inspection by the County or any authorized representatives of the County. Copies shall be furnished if requested.

Final billings submitted by the Company shall carry a statement certifying that all items claimed have been reviewed and are in conformity with the provisions of the agreement, that credits have been given for all salvaged materials as required, and that all contractor's bills have been paid in full. This statement shall be signed by an authorized representative of the Company.

In the event a final and complete billing has not been received by the County three months following the completion of work and the Company has not during that period demonstrated to the County's satisfaction a hardship in completing that billing, the County may, in its sole discretion, consider the last payment made to be the final payment due under this agreement.

11. An extreme delay means the Company failed to begin relocation project work after receiving notice from the County to begin work and caused a thirty-day delay to the entire road construction project. The County shall notify the Company in writing if the Company causes an extreme delay. The Company shall have thirty calendar days from the date of the notice to stop the delay and expeditiously work to complete the relocation project. If the Company fails to stop the delay within thirty days after receiving notice of the delay, the County may require the Company to pay the costs associated with the delay of the project. The costs may include contractor remobilization costs, traffic control costs for the time of the delay, and any other costs attributable to the Company’s delay. The County may deduct these costs from the retainage or any reimbursement owed to the Company. Should the costs of the delay exceed the amount of retainage or reimbursement owed to the Company, the County may invoice the Company for the costs of the delay, and the Company shall pay any invoices for the costs associated with extreme delays by the Company. The County may pursue any remedy available in law or equity to recover the costs of the delay.

Should a substantial hardship prevent the Company from performing the relocation project work and cause an extreme delay, the Company may apply in writing for a waiver excusing all or a portion of the delay and waiving all or a portion of the costs associated with the extreme delay. In its application, the Company shall state the cause of the delay and the time in which the Company shall resolve the hardship and continue with the relocation project work. The County Engineer shall determine whether to grant the waiver and what portion of the costs to waive.

Should a dispute arise about the cost levied upon the Company for an extreme delay, the County and the

CONFIDENTIAL/PROPRIETARY

GENERAL NOTES

GENERAL NOTES

CONTRACTOR MUST OBTAIN LOCATES PRIOR TO DISTURBING THE GROUND.

CONTRACTOR MUST HAVE A COPY OF THE APPROVED PERMIT FROM THE APPROPRIATE AGENCY ON THE JOBSITE AT ALL TIMES.

ALL CABLE WILL BE PLACED AT A MINIMUM DEPTH OF 36" DEEP UNLESS OTHERWISE DIRECTED BY A REPRESENTATIVE OF THE UTILITY OWNER.

ANY LANDSCAPING WILL BE REPLACED TO EQUAL OR BETTER THAN THAT WHICH EXISTED PRIOR TO WORK.

PROJECT SITE WILL BE PROPERLY SECURED PRIOR TO THE END OF EACH DAY.

ALL WORK IS TO BE IN ACCORDANCE WITH ALL AUTHORITIES HAVING JURISDICTION IN THE WORK ZONE.

CONTRACTORS ARE ADVISED TO CONTACT THE PROJECT MANAGER FOR ANY ADDITIONAL INFORMATION OR CLARIFICATION CONCERNING SCOPE OF WORK OR THE REQUIREMENTS NECESSARY FOR PROJECT COMPLETION.

CONTRACTOR IS RESPONSIBLE TO FIELD VERIFY ALL DIMENSIONS, QUANTITIES AND EXISTING CONDITIONS PRIOR TO CONSTRUCTION. IF A SIGNIFICANT CHANGE TO THE RUNNING LINE IS NEEDED, PLEASE CONTACT THE PROJECT MANAGER BEFORE PROCEEDING.

BEFORE CONSTRUCTION BEGINS, CONTRACTOR SHALL TAKE APPROPRIATE PRECAUTIONS TO AVOID ANY POTENTIAL OBSTRUCTIONS PRIOR TO PROCEEDING WITH WORK.

NO CONSTRUCTION ON PRIVATE PROPERTY WILL COMMENCE UNTIL APPROVAL IS GIVEN BY A REPRESENTATIVE OF THE UTILITY OWNER.

CONTRACTOR SHALL NOT PROCEED WITH WORK UNTIL THEY HAVE RECEIVED A PURCHASE ORDER AND HAVE BEEN DIRECTED TO DO SO BY AN AUTHORIZED REPRESENTATIVE OF THE UTILITY OWNER.

CONTRACTOR SHALL NOT EXCEED THE PURCHASE ORDER VALUE WITHOUT AUTHORIZATION IN WRITING FROM THE APPROPRIATE REPRESENTATIVE OF THE UTILITY OWNER.

AS-BUILTS WILL BE REQUIRED FOR EACH PROJECT INCLUDING CABLE FOOTAGE SEQUENTIALS AT EVERY ACCESS POINT, SLACK LOOP, SPLICE LOCATION, POLE AND TERMINATION POINT. CONTRACTOR SHOULD ALSO PROVIDE NOTES OF ALL CHANGES IN DEPTHS, RUNNING LINES, MH/HH LOCATIONS, AND ANY OTHER APPLICABLE NOTES TO DEPICT THE WORK THAT TOOK PLACE. NOTE: ALL MAJOR CHANGES NEED TO BE PRE-APPROVED BY AN AUTHORIZED REPRESENTATIVE OF THE UTILITY COMPANY PRIOR TO STARTING THE WORK.

SITE CONDITIONS

THE ACTUAL LOCATION OF EXISTING CONDUIT AND CABLES MAY VARY FROM THE LOCATION SHOWN. REPAIR OF ANY DAMAGED CONDUIT CONTAINING CABLE SHALL BE MADE BY USE OF PVC SPLIT DUCT. THE CONTRACTOR SHALL ENCLOSE THE EXISTING CABLES IN PVC.

THE LOCATIONS OF EXISTING UTILITIES SHOWN IN THIS PLAN ARE APPROXIMATE. WHEN WORK IS TO BE CONDUCTED IN THE VICINITY OF KNOWN UTILITIES, THEIR ACTUAL LOCATION MUST BE FIELD VERIFIED TO AVOID CONFLICTS OR DAMAGE TO THOSE UTILITIES. VARIATION IN LOCATION BETWEEN "RECORDED POSITIONS" AND ACTUAL POSITIONS SHOULD BE ANTICIPATED.

IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE LOCATION OF ALL UNDERGROUND UTILITIES. BURIED UTILITIES MAY EXIST IN THE AREA IN ADDITION TO THOSE SHOWN ON THE PLAN. THE CONTRACTOR SHALL CONTACT PROPERTY OWNERS WHEN WORKING WITHIN PRIVATE EASEMENTS FOR LOCATION OF UNDERGROUND TANKS, PIPELINES, DRAIN TILES, OR OTHER BURIED IMPROVEMENTS. THE CONTRACTOR SHALL ALSO NOTIFY THE UTILITY NOTIFICATION CENTER PRIOR TO COMMENCING ANY CONSTRUCTION ACTIVITIES.

THE CONTRACTOR MUST ASSUME ALL BURIED UTILITIES ENCOUNTERED ARE ALIVE AND ACTIVE UNLESS SPECIFICALLY INSTRUCTED OTHERWISE BY OWNERS OR OPERATORS OF SAID UTILITIES.

DAMAGE TO SUB-SURFACE STRUCTURES IS THE SOLE RESPONSIBILITY OF THE PLACING CONTRACTOR.

THE CONTRACTOR SHALL PROTECT THE EXISTING TRAFFIC CONTROL LOOPS. IF EXISTING TRAFFIC CONTROL LOOPS ARE DAMAGED DURING CONSTRUCTION, THE ENTIRE LOOP WIRE FROM TERMINAL TO TERMINAL SHALL BE REPLACED IN ACCORDANCE WITH GOVERNING AGENCY STANDARDS AND REGULATIONS AT CONTRACTOR'S EXPENSE.

REMOVAL OF EXISTING ASPHALT PAVEMENT, CONCRETE CURBS, AND CONCRETE SIDEWALKS WILL BE "NEAT LINE" WITH SAW OR PAVEMENT CUTTER, PER REQUIREMENTS AND SPECIFICATIONS OF THE AGENCY OR DEPARTMENT RESPONSIBLE FOR EACH LOCATION. IF CONCRETE PAVEMENT IS ENCOUNTERED WHILE EXCAVATING CONDUIT TRENCHES, THE CONCRETE REMOVAL WILL BE "NEAT LINE" WITH A PAVEMENT SAW.

IF CONCRETE CURB RETURNS AND/OR SIDEWALKS ARE REPLACED DUE TO CONDUIT OR MANHOLE INSTALLATION, THE CONTRACTOR SHALL PLACE APPROVED HANDICAPPED SIDEWALK AND CURB ACCESS RAMPS IN CONFORMANCE WITH THE APPROPRIATE STATE STATUTES.

ALL MATERIALS NECESSARY FOR THE REPAIR OF STREETS, CURBS, SIDEWALKS, SANITARY SEWERS, STORM SEWERS, AND PUBLIC SERVICE UTILITIES, AND THE INSTALLATION OF SUCH MATERIALS SHALL BE IN CONFORMANCE WITH THE REQUIREMENTS AND SPECIFICATIONS OF THE AGENCY OR DEPARTMENT RESPONSIBLE FOR THE OPERATION AND MAINTENANCE OF THE REPAIRED FACILITY.

ALL WORK SHALL CONFORM TO THE SPECIFICATIONS OF THE JURISDICTIONAL PERMIT AGENCY.

ALL OPEN TRENCH WILL BE CLEARLY MARKED WITH BARRICADES OR CONES. STEEL PLATES OR OTHER TYPES OF BRIDGING SHALL BE PROVIDED TO COVER OPEN TRENCH IN THE TRAVEL PORTION OF THE STREETS. THESE PLATES OR BRIDGING SHALL BE ADEQUATE TO SUPPORT THE NORMAL VEHICLE LOADS ANTICIPATED IN THIS AREA AND SHALL BE IN PLACE DURING ALL NON-WORKING AREAS.

ALL SURFACES TO BE RESTORED TO ORIGINAL CONDITION, AND BACKFILL TO BE COMPACTED AS SPECIFIED. TRENCH EXCAVATION IN SURFACES WHICH INCLUDE CONCRETE TREATED BASE SHALL FOLLOW LOCAL AREA SPECIFICATIONS.

HAZARDOUS MATERIALS

THE CONTRACTOR SHALL NOTIFY THE JURISDICTIONAL PERMIT AGENCY IMMEDIATELY IF ANY MATERIALS ARE ENCOUNTERED THAT ARE CONSIDERED HAZARDOUS BY THE EPA, DEQ, OR OSHA. IF POTENTIALLY HAZARDOUS MATERIALS ARE ENCOUNTERED THE CONTRACTOR SHALL SECURE THE SITE AND PREVENT THE ACCIDENTAL EXPOSURE BY THE PUBLIC OR THE CONTRACTOR'S PERSONNEL.

THE CONTRACTOR MAY EXCAVATE UP TO, BUT SHALL NOT DISTURB KNOWN HAZARDOUS MATERIALS SUCH AS ASBESTOS, OILS, ACID, ETC. THE REMOVAL OF ALL HAZARDOUS MATERIALS MUST BE DONE BY AN APPROVED OR CERTIFIED HAZARDOUS MATERIALS CONTRACTOR LICENSED IN THE APPROPRIATE STATE.

A COPY OF ALL CORRESPONDENCE PERTINENT TO THE REMOVAL OF HAZARDOUS MATERIALS SHALL BE TRANSMITTED TO OWNER AND A COPY SHALL BE AVAILABLE AT THE PROJECT OFFICE AND THE JOB SITE.

AERIAL NOTES

- AERIAL CONSTRUCTION TO BE PERFORMED TO INDUSTRY ACCEPTABLE STANDARDS.
- ALL HEIGHTS OF CABLE PLACEMENT WILL BE RECORDED AT TIME OF CONSTRUCTION. DOCUMENT ALL POINTS OF ATTACHMENT.
- ALL EXTENSION ARMS TO BE PLACED WILL BE EPOXY ARMS UNLESS OTHERWISE NOTED OR APPROVED BY THE INSPECTOR.
- BOND STRAND TO POWER MGN WHERE APPLICABLE. ANCHORS TO BE USED WILL BE 3/4 SCREW IN TYPE.
- ALL STRAPS WILL BE PLACED 4" BEFORE AND AFTER EVERY SUPPORTING CLAMP AT A MINIMUM OF 21" APART.
- P.O.A. = POINT OF ATTACHMENT.
- ADD MISSING GROUNDS.
- REPAIR/REPLACE EXISTING LASHING WIRE IF DAMAGED.

CONSTRUCTION STAKING

IN AREAS WHERE THE CONDUIT ALIGNMENT IS NOT CLEARLY DEFINED BY CURB LINES, FENCE LINES, OR OTHER EVIDENCE OF THE RIGHT-OF-WAY, THE ENGINEER WILL PROVIDE CENTERLINE STAKES OR PAINT MARKS WHERE REQUIRED TO MAKE THE PROPOSED CONDUIT ALIGNMENT EVIDENT.

MANHOLE CENTERS WILL BE FIELD STAKED BY THE ENGINEER WHEN REQUESTED WITH OFFSET STAKES AT RIGHT ANGLES (90°) TO THE CONDUIT ALIGNMENT.

CLOSURES IDENTIFIED IN THE PLANS SHALL BE LOCATED BY THE CONTRACTOR. DEVIATION FROM PLAN LAYOUT SHALL BE APPROVED BY THE ENGINEER PRIOR TO CONDUIT AND/OR CLOSURE INSTALLATION.

IF ADDITIONAL, FIELD STAKING OR LOCATION OF CONDUITS, MANHOLES, PROPERTY LINES, ETC., BECOMES NECESSARY, THE CONTRACTOR IS TO NOTIFY THE INSPECTOR OR THE ENGINEER TWO WORKING DAYS PRIOR TO BEGINNING THE WORK.

PERMITS - FRANCHISES - EASEMENTS

PHYSICAL WORK SHALL NOT BE STARTED UNTIL THE GOVERNING AGENCY INSPECTOR AND THE CONTRACTOR ARE IN POSSESSION OF AND HAVE CAREFULLY REVIEWED AND FULLY UNDERSTAND ALL CONDITIONS AND SPECIFICATIONS SET FORTH IN THE REQUIRED PERMITS, FRANCHISES, AND/OR EASEMENTS.

PLACING FOREMAN TO HAVE A COPY OF THE PERMITS/EASEMENTS ON SITE AT ALL TIMES.

ANY CONFLICT BETWEEN WORK PRINT SPECIFICATIONS AND SPECIFICATIONS SET FORTH UNDER RELATED PERMITS, FRANCHISES, AND/OR EASEMENTS MUST BE CLEARED BY PROPER COMPANY AUTHORITY BEFORE PROGRESSING WITH WORK INVOLVED

TRAFFIC CONTROL

THIS PROJECT WILL INVOLVE WORKING ALONG A MAJOR ARTERIAL ROAD AND HEAVY TRAFFIC VOLUME SHOULD BE ANTICIPATED.

UNIFORM TRAFFIC FLOW SHALL BE MAINTAINED AT ALL TIMES. ONLY EQUIPMENT AND MATERIALS NECESSARY FOR IMMEDIATELY SCHEDULED OR IN PROGRESS WORK WILL BE MAINTAINED IN THE WORK AREA. ALL OTHER EQUIPMENT AND MATERIALS WILL BE "STORED OR STOCKPILED" IN SUCH A MANNER AS TO ELIMINATE HAZARDOUS CONDITIONS FOR TRAFFIC OR PEDESTRIANS DURING NON-WORKING OR SHUT DOWN PERIODS.

TRAFFIC WARNING DEVICES AND SIGNS SHALL CONFORM TO THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES FOR STREETS AND HIGHWAYS (U.S. GOVERNMENT PRINTING OFFICE) AND TO THE STATE STANDARD SPECIFICATIONS FOR HIGHWAY CONSTRUCTION. HIGH LEVEL WARNING TYPE DEVICES ARE TO BE USED AT ALL TIMES AND SPECIAL WARNING DEVICES MAY BE STIPULATED BY THE JURISDICTIONAL PERMIT AGENCY AT ANY TIME THE USE WILL ADD TO THE SAFETY AND PROTECTION OF TRAFFIC OR PEDESTRIANS IN THE CONSTRUCTION AREA.

ALL CONDUIT TRENCHING IN PAVED AREAS SHALL BE BACKFILLED WITH CRUSHED GRAVEL OR COMPLETELY COVERED AT THE COMPLETION OF EACH WORKING DAY. ANY BACKFILLED TRENCH SHALL BE CAPPED WITH A MINIMUM LAYER OF ASPHALTIC CONCRETE COLD PATCH AT THE END OF EACH WORKING DAY.

THE CONTRACTOR SHALL MARK THE CONDUIT TRENCH AND DEFINE HIS CONSTRUCTION AREA CLEARLY WITH BARRICADES, CONES, AND/OR OTHER VISIBLE METHODS THAT ALERT THE PUBLIC OF THE CONSTRUCTION ACTIVITY.

A TRAFFIC CONTROL PLAN SHALL BE PREPARED BY THE CONTRACTOR AS REQUIRED AND SUBMITTED TO EACH PERMITTING AGENCY REQUESTING SUCH PLAN FOR REVIEW AND APPROVAL OR REVISION PRIOR TO COMMENCING ANY CONSTRUCTION ACTIVITY FOR THIS PROJECT. THE APPROVED PLAN SHALL BE SUBMITTED TO THE AGENCY AND A COPY OF THE PLAN SHALL BE KEPT AT THE CONSTRUCTION SITE AND MUST BE READILY AVAILABLE REVIEW BY THE AGENCY REPRESENTATIVES.

SPECIAL UTILITY CLEARANCES

ALL WORK CONDUCTED ADJACENT TO WATER MAINS SHALL CONFORM TO THE FOLLOWING CONDITIONS:

A. WHEREVER POSSIBLE CONDUIT SHALL MAINTAIN A HORIZONTAL SEPARATION OF 3.0 FEET, MEASURED SURFACE TO SURFACE (OUTSIDE EDGE TO OUTSIDE EDGE), FROM PARALLEL WATER MAINS.

B. WHEREVER POSSIBLE, CONDUIT SHALL PASS UNDER EXISTING WATER MAINS AND MUST MAINTAIN 12" VERTICAL CLEAR SEPARATION. CONDUITS PASSING OVER WATER MAINS MUST ALSO MAINTAIN THE 12" VERTICAL SEPARATION.

C. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ESTABLISHING AND MAINTAINING THIS REQUIRED VERTICAL SEPARATION BY EITHER EXPOSING THE WATER MAIN EVERY 100 FEET IN THOSE AREAS WHERE HORIZONTAL SEPARATION IS LESS THAN 3.0 FEET OR BY UTILIZING THE DEPTHS OF ADJACENT WATER VALVES. IF THE CONTRACTOR UTILIZES THE ADJACENT WATER TO DETERMINE WATER MAIN DEPTH, HE SHALL CONTACT THE AGENCY AT EACH SUCH LOCATION AND THE AGENCY WILL DETERMINE THE NECESSARY DEPTH OF THE TOP OF THE CONDUIT AT THAT POINT.

D. THE VERTICAL AND HORIZONTAL SEPARATION SHALL BE MAINTAINED AT ALL TIMES UNLESS SPECIFICALLY REVISED BY AGREEMENT BETWEEN THE JURISDICTIONAL PERMIT AGENCY AND THE AGENCY ANY SPECIFIC DEVIATION IN VERTICAL AND HORIZONTAL SEPARATION FROM THOSE DESCRIBED SHALL BE REPORTED TO THE OWNER BY THE CONTRACTOR. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING VERTICAL AND HORIZONTAL SEPARATION AT ALL TIMES AND SHALL BE RESPONSIBLE FOR ANY AND ALL ENCROACHMENTS.

E. CLEARANCES TO STORM SEWERS AND SANITARY SEWERS SHALL BE EXACTLY THE SAME AS THOSE TO WATER MAINS.

STRUCTURE PROTECTION

MANHOLES AND CONDUIT TO BE PLACED ADJACENT TO EXISTING STRUCTURES SUCH AS BRIDGE BRIDGE FOOTINGS/PIERS, BUILDING FOUNDATIONS, WALLS, POWER AND TELEPHONE POLES, AND OTHER UTILITIES SHALL MAINTAIN A MINIMUM CLEARANCE AS SHOWN. THE CONTRACTOR SHALL NOT UNDERMINE ANY ADJACENT STRUCTURE WITHOUT SPECIFIC WRITTEN PERMISSION FROM THE OWNER/OPERATOR OF SUCH STRUCTURE.

SHORING USED AS FOUNDATION SUPPORT SHALL BE DESIGNED SPECIFICALLY FOR BOTH THE LIVE AND DEAD LOADS OF THE STRUCTURE, OR IF ONLY THE DEAD LOAD IS USED FOR DESIGN, THE CONTRACTOR SHALL PROVIDE A DETAILED LAYOUT AND PLAN OF THE METHOD OF ESTABLISHING AND MAINTAINING THE DESIGN LOAD CONDITIONS (I.E., ROAD DETOURS, TIEBACKS, ETC.).

SEE UTILITY CLEARANCE SECTION NOTES FOR CLEARANCE CRITERIA TO PARALLEL OR CROSS UTILITIES.

EXISTING UTILITIES EXPOSED DURING EXCAVATION SHALL BE 100% SUPPORTED BY EITHER TRENCH BRIDGING AND SUSPENSION OR BY THE USE OF LONGITUDINAL TRAYS OR PLATFORMS VERTICALLY SUPPORTED BY ADJUSTABLE BUILDING JACKS.

EXISTING SPLICE CASES AND CABLES SHALL BE SUPPORTED BY SUSPENSION FROM A CROSSING BEAM. SUPPORTS SHALL BE PLACED AT A MAXIMUM SPACING OF 4.0 FEET AND SHALL CONSIST OF A CANVAS SLING WITH NYLON BELTING OR ROPE. ALL CABLE SUPPORTS SHALL BE PLACED IN A MANNER THAN PREVENTS KINKS OR OTHER DAMAGE TO THE CABLE SHEATH.

AN ACCEPTABLE ALTERNATIVE TO CABLE SLINGS WOULD BE THE UTILIZATION OF A WIDE FLANGE "I" BEAM OR CHANNEL AS A "CABLE TRAY" WITH THE CABLES/CASES BANDED IN PLACE.

SHORING

THE CONTRACTOR SHALL PROVIDE SHORING FOR CONDUIT TRENCH EXCAVATION 42" OR MORE IN DEPTH AS MEASURED FROM THE HIGH SIDE OF THE TRENCH AND FOR ALL MANHOLE EXCAVATION.

MANHOLE SHORING SHALL BE TIGHT-SHEETED.

ALL SHORING SHALL CONFORM TO THE STANDARDS AND SPECIFICATIONS OF LOCAL COUNTY AND THE OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA).

SHORING SHALL BE DESIGNED TO MEET H-20 HIGHWAY LOADING.

THE CONTRACTOR SHALL PROVIDE ALL SHORING AND DESIGN CALCULATIONS TO THE PERMIT ISSUING AGENCY PRIOR TO COMMENCING ANY CONSTRUCTION ACTIVITY.

RE: Project No. P0042332/11149-004 – US21/SC51
York Co: Relocation Package – York County Natural Gas

Dear Mr. Moss –

Below you will find a brief description of the proposed work and submittal explanation. Please refer to York County Natural Gas's individual plans for details, or this document for plan status.

This package assumes approval to remain in place by SCDOT. YCNGA is still trying to obtain this. The reimbursement agreement and scope of work reflects this assumption. Should SCDOT deny their request, then both will need to be updated and amended.

Scope of Work and Package Contents

Relocation Package

- Utility Agreement
- Detailed Cost Estimate
- Relocation Plans

Scope of Work Summary

Location	Utility Type	Scope of Work	Cost*
US21	4" Gas	Install new 4" gas line from Sta 21+00 to 28+00	York County
US21	6" Gas	Install new 6" gas line from Sta 73+00 to 79+00	York County
US21	6" Gas	Install new 6" gas line from Sta 98+00 to 109+00	York County
US21	6" Gas	Install new 6" gas line from Sta 116+00 to 128+00	York County
SC51	2" Gas	Install new 2" gas line from Sta 326+90 to 340+00	York County
Lake View	2" Gas	Install new 2" gas line	York County
Amelia	2" Gas	Install new 2" gas line	York County
Gold Hill	4" Gas	Install new 4" gas line from Sta 14+00 to 33+00	York County
Regent	4" Gas	Install new 4" gas line from Sta 12+00 to 16+00	York County

It is STV's recommendation that this relocation package be approved and proceed to the formal agreement.

Should you have any additional questions or comments, please feel free to call me (843-207-2031) or email me at natalie.roumillat@stvinc.com .

Sincerely,

N. Oriana Roumillat

Agreement # _____

UTILITY AGREEMENT

York County Project No. 11149-004 Route (or Road No.) US-21 & SC-51

This Agreement made this _____ day of _____, 2024 by and between

York County, hereinafter called "County" and the utility company

York County Natural Gas Authority (YCNGA)

hereinafter called "Company."

DEFINITIONS

Plans – detailed drawings or diagrams showing the stages for the relocation project

Schedule – the estimated number of days to complete each stage of the relocation project

Cost Estimate – the approximate cost of the relocation project

Actual Cost – the amount the Company pays to complete the relocation project

W I T N E S S E T H:

1. It is mutually agreed by and between the parties hereto that the Company shall perform or cause to be performed, the following work to its utility property facilities as shown on the Plans and Cost Estimate attached and incorporated into this agreement.

General description:

YCNGA will install/ relocate new 6" and 4" Steel Pipe, 4" and 2" Plastic Pipe, and associated valves in locations so as not to conflict with road grading, curb & gutter, ditches, stormwater culverts, and guardrail on US 21, SC 51, and roads which tie-in to the project corridor. When practical and not directly in-conflict, YCNGA will attempt to leave some of our facilities under pavement in order to reduce the costs associated with the relocations of this project.

2. The Company hereby agrees to relocate its utility facilities in conflict with highway construction in accordance with the provisions set forth in the Federal Highway Administration's FAPG 23 C.F.R. § 645A and the SCDOT's "A Policy for Accommodating Utilities on Highway Rights-of-Way." The Cost Estimate is:

TOTAL $1,246,188

County Share $1,246,188 Company Share $0

(a) The Company ☐ does have the right of occupancy in its existing location by reason of holding the fee, an easement, or other real property interest or ☑ does not and is in the existing right of way by encroachment.

(b) This section of line has been in service for approximately 25+ years.

(c) Such work as is necessary to relocate, alter, or maintain the facility will be done in such a manner to minimize interference with or endangering the safety of the general public in their use of the roads as a highway. Traffic control and signing will be in accordance with "The Federal Highway Administration's Manual on Uniform Traffic Control Devices for Streets and Highways".

3. The Company shall designate an employee or agent who possesses knowledge of the relocation project and authority to make decisions on behalf of the Company to serve as the Designated Contact Person. The Designated Contact Person shall attend all bi-weekly construction meetings or ensure that any temporary designee attending a bi-weekly meeting possesses knowledge of the relocation project and authority to make decisions on behalf of the Company. The County shall communicate with the Company about the relocation project through the Designated Contact Person. The Company shall notify the County in writing of any changes to the Designated Contact Person within seven calendar days of the change. The Company designates the following person as the Designated Contact Person for this project:

Name: Levi Hagerdon
Phone Number: (803) 323-5367
Email: levi.hagerdon@ycnga.com

4. The County shall provide the Company written notice, by email, of the date the County intends to begin advertising the bid. The Company shall update its Schedule within forty five days after receiving written notice of the bid advertisement. The County shall provide the Company notice of the preconstruction meeting, which the Company's Designated Contact Person shall attend.

5. The Company shall begin relocation project work promptly upon receiving authorization in writing, by email, from the County and complete the work in accordance with the schedule and as promptly as is practicable. Within ten calendar days of receiving written authorization, the Company shall provide notice to the County of the date on which work is expected to begin.

6. The Company will perform the work provided for in this agreement by the method checked below, in accordance with the provisions FAPG 23 CFR § 645.115:

( ) BY COMPANY'S REGULAR FORCES

(●) BY CONTRACT: (State one of recognized reasons for necessity of performing work in this manner)

YCNGA does not own the equipment or have the personnel to install this quantity of gas main; for approved projects we contract construction forces with who we have an established relationship.

If the Company, subject to prior approval, proposes to contract a portion of or all of the work covered by this agreement, then the Company must submit a list of items in the Cost Estimate that will be accomplished by contract. Where the Company elects to solicit competitive bids from a list of qualified contractors rather than through advertising in a publication, the names and addresses of those contractors must be written on the Cost Estimate or furnished to the County in advance of the Company's solicitation of bids.

7. The County will reimburse the utility company for costs incurred for work performed in accordance with the Plans and Cost Estimate. The Company must provide accurate records supporting all costs incurred and submitted for reimbursement. The method of developing the relocation costs shall be one of the following alternatives.

☑ Actual and related direct costs accumulated in accordance with a work order accounting procedure prescribed by the applicable Federal or State regulatory body.

☐ Unit costs, such as broad gauge units of property, as used in own operations. (This method must have prior approval.)

The County will not pay for any components or items considered to be an upgrade unless such upgrades are required by applicable law, necessitated by the relocation, or proven to be more cost efficient.

8. All work performed by the Company shall be performed according to the plans and estimates approved by the County. The County is not obligated to reimburse the Company for any work not included in the Plans or Cost Estimate. The County Engineer may approve reimbursement for Actual Costs or additional work not included in the Plans or Cost Estimate if (1) the Actual Costs or additional work is necessary for the relocation project and (2) the Actual Costs or additional work do not exceed the Cost Estimate by more than 50%. The Company must seek and receive prior written approval before incurring costs for additional work.

9. The Plans must show the existing facilities, permanent changes to be made, and the stages by which these changes are to be accomplished. The Schedule must estimate the time required for each stage.

10. Periodic progress billings of incurred costs may be made by the Company to the County not to exceed monthly intervals and amounting to at least $2500.00; however, total progress billing payments shall not exceed the Cost Estimate or approved Actual Cost.

Upon completion of the work and no later than three months thereafter, the Company shall, at the earliest date practicable, furnish the County with five (5) copies of its final and complete billing of all costs incurred in connection with the work performed hereunder, such statement to follow as closely as possible the order of the items contained in the Cost Estimate. The totals for labor, overhead construction cost, travel expense, transportation, equipment, material and supplies, handling cost, and other services shall be shown in such a manner as will permit ready comparison with the Plans and Cost Estimates. Items of materials shall be itemized where they represent major components.

Credit shall be given for usable materials recovered from permanent or temporary installations. The final billing shall show the description and site of the project, the date on which the first work was performed; or, if preliminary engineering or right-of-way items are involved, the date on which the earliest item of billed expense was incurred, the completion date and the location where the records and accounts billed can be audited. The Company shall make adequate reference in the billing to its records, accounts, and other documents. Contractors and any subcontractors are to maintain all books, documents, papers, accounting records, and other evidence pertaining to costs incurred and to make such materials available at their respective offices at all reasonable times during the contract for inspection by the County or any authorized representatives of the County. Copies shall be furnished if requested.

Final billings submitted by the Company shall carry a statement certifying that all items claimed have been reviewed and are in conformity with the provisions of the agreement, that credits have been given for all salvaged materials as required, and that all contractor's bills have been paid in full. This statement shall be signed by an authorized representative of the Company.

In the event a final and complete billing has not been received by the County three months following the completion of work and the Company has not during that period demonstrated to the County's satisfaction a hardship in completing that billing, the County may, in its sole discretion, consider the last payment made to be the final payment due under this agreement.

11. An extreme delay means the Company failed to begin relocation project work after receiving notice from the County to begin work and caused a thirty-day delay to the entire road construction project. The County shall notify the Company in writing if the Company causes an extreme delay. The Company shall have thirty calendar days from the date of the notice to stop the delay and expeditiously work to complete the relocation project. If the Company fails to stop the delay within thirty days after receiving notice of the delay, the County may require the Company to pay the costs associated with the delay of the project. The costs may include contractor remobilization costs, traffic control costs for the time of the delay, and any other costs attributable to the Company’s delay. The County may deduct these costs from the retainage or any reimbursement owed to the Company. Should the costs of the delay exceed the amount of retainage or reimbursement owed to the Company, the County may invoice the Company for the costs of the delay, and the Company shall pay any invoices for the costs associated with extreme delays by the Company. The County may pursue any remedy available in law or equity to recover the costs of the delay.

Should a substantial hardship prevent the Company from performing the relocation project work and cause an extreme delay, the Company may apply in writing for a waiver excusing all or a portion of the delay and waiving all or a portion of the costs associated with the extreme delay. In its application, the Company shall state the cause of the delay and the time in which the Company shall resolve the hardship and continue with the relocation project work. The County Engineer shall determine whether to grant the waiver and what portion of the costs to waive.

Should a dispute arise about the cost levied upon the Company for an extreme delay, the County and the

Company agree participate in pre-litigation mediation and agree to diligently work in good faith to resolve any disputes associated with the costs charged to the Company for extreme delays. The parties shall select a mediator approved by both parties and set forth any resolutions in writing signed by both parties.

Should the parties fail to reach an agreement through pre-litigation mediation, the parties may seek a resolution for the dispute through the Court of Common Pleas located in York County, South Carolina, or the United States District Court for the State of South Carolina. This agreement shall be governed exclusively by the laws of the State of South Carolina without giving effect to its conflicts of law provisions.

12. The County shall have the right to inspect all recovered materials from the permanent facility prior to disposal by sale or scrap. This requirement will be satisfied by the Company giving notice to the County of the time and place the materials will be available for inspection. This notice is the responsibility of the Company and it may be held accountable for full value of materials disposed of without notice. The Company shall furnish a listing on final billings of major items not eligible for salvage credit and reasons therefore.

13. The Company will abide by the contract cost principles as set forth in FAPG 23 CFR 645A.

14. The Company will not participate directly or indirectly in any practice that subjects persons to discrimination because of their race, color, religion, sex, or national origin.

QUALITY LEVEL DEFINITIONS

Level D. This level information comes solely from existing utility records. It may provide an overall "feel" for the congestion of utilities, but it is often highly limited in terms of comprehensiveness and accuracy. Its usefulness should be confined to project planning and route selection activities.

Level C. This level involves surveying visible aboveground utility facilities (e.g., manholes, valve boxes, posts) and correlating this information with existing utility records. When using this information, it is not unusual to find that many underground utilities have been either omitted or erroneously plotted. Its usefulness, therefore, should be confined to rural projects where utilities are not prevalent, or are not too expensive to repair or relocate.

Level B. This level involves the use of surface geophysical techniques to determine the existence and horizontal position of underground utilities. This activity is called "designating." Two-dimensional mapping information is obtained. This information is usually sufficient to accomplish preliminary engineering goals. Decisions can be made on where to place storm drainage systems, footers, foundations and other design features in order to avoid conflicts with existing utilities. Slight adjustments in the design can produce substantial cost savings by eliminating utility relocations.

Level A. This level involves the use of nondestructive digging equipment at critical points to determine the precise horizontal and vertical position of underground utilities, as well as the type, size, condition, material and other characteristics. This activity is called "locating." It is the highest level presently available. When surveyed and mapped, precise plan and profile information are available for use in making final design decisions. By knowing exactly where a utility is positioned in three dimensions, the designer can often make small adjustments in elevations or horizontal locations and avoid the need to relocate utilities. Additional information (e.g., utility materials, condition, size, soil contamination, paving thickness) also assists the designer and Utility Company in their decisions.

U SHEET - UTILITY COORDINATION LEGEND

YORK COUNTY
SOUTH CAROLINA

US 21 NORTH PHASE 1 & SC 51
POLE DATA SHEET

SCALE: N/A RTE. US 21 DWG. NO. U4D

FOR INFORMATION ONLY

FED. ROAD DIV. NO.	STATE	COUNTY	PROJECT ID	PROJECT NO.	ROUTE NO.	SHEET NO.
3	S.C.	YORK	0042332	1149-004	US 21 SC 51	U5

GENERAL NOTES

THESE PLANS ARE TO BE USED ONLY AS REFERENCE FOR UTILITY RELOCATIONS.

ALL RELOCATIONS ARE APPROXIMATE BASED ON INFORMATION PROVIDED BY THE INDIVIDUAL UTILITY OWNERS.

ALL PROPOSED RELOCATIONS ARE CONSIDERED INCOMPLETE AND THE INDIVIDUAL UTILITY OWNERS MAY REQUIRE ADDITIONAL RELOCATIONS.

ACTUAL FIELD CONDITIONS WILL DICTATE THE PRECISE LOCATION OF THE RELOCATED UTILITY THROUGH COORDINATION BETWEEN THE CONTRACTOR AND THE UTILITY OWNER.

THE CONTRACTOR IS REQUIRED TO CONTACT 811 AS WELL AS THE NON-811 MEMBER UTILITIES THREE DAYS PRIOR TO EXCAVATING ACTIVITIES.
1-888-721-7877

SPECIAL PROVISIONS

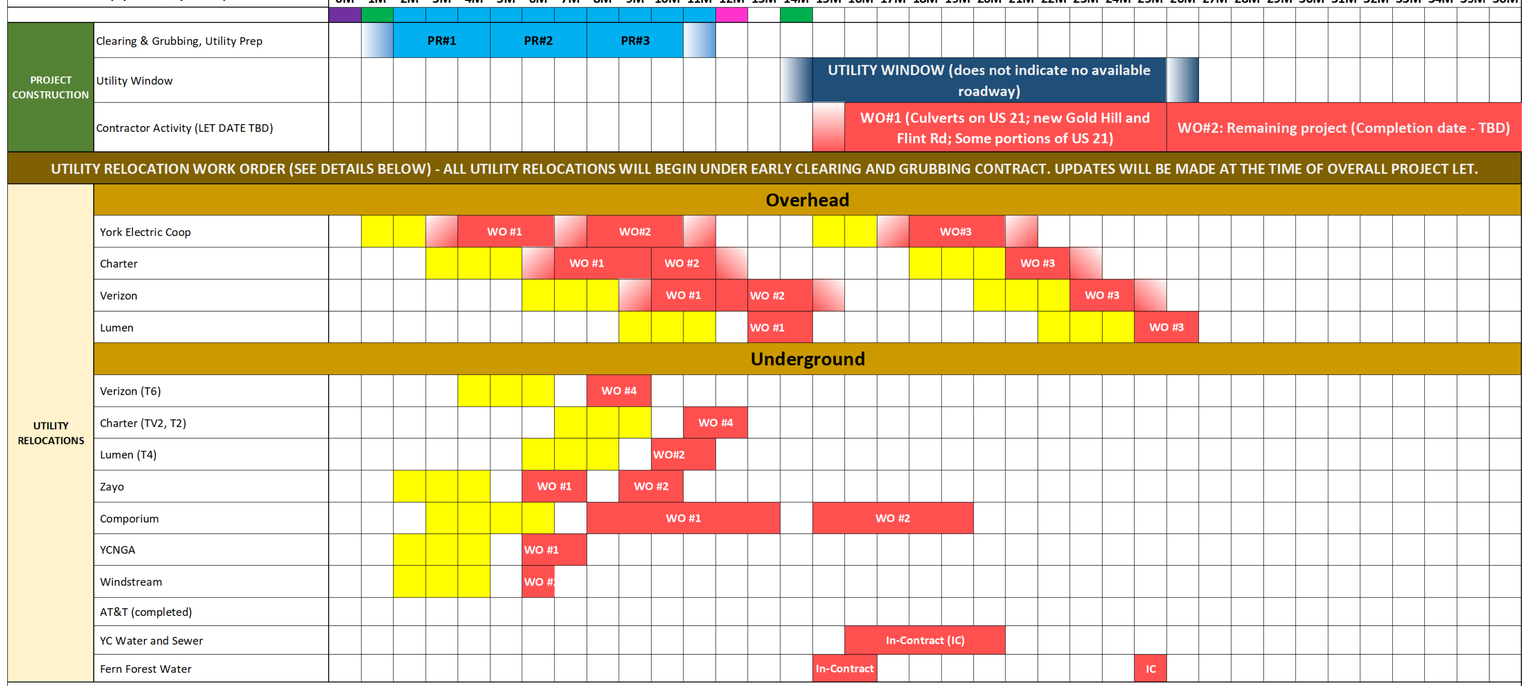
UTILITY STAKING:

CONTRACTOR SHALL BE AWARE ON AS NEEDED BASIS, UTILITIES MAY REQUEST STAKING OF CONSTRUCTION ITEMS AND RIGHT-OF-WAY TO HELP FACILITATE RELOCATIONS AND TO AVOID POTENTIAL CONFLICT WITH ROADWAY CONSTRUCTION AND OTHER UTILITIES.

UTILITY RELOCATION CLEARING SEQUENCE:

UTILITY RELOCATION APPROACH:

IT IS THE INTENTION OF THE UTILITIES TO RELOCATE ACCORDING TO THE FOLLOWING CONSTRUCTION SEQUENCE. THE CLEARING CONTRACTOR SHALL CLEAR AND GRUB ACCORDING TO THE PRIORITY SHOWN IN CHART.



IT IS THE INTENT THAT UTILITIES WILL START WORKING IN ALL AVAILABLE LOCATIONS, WHERE AND WHEN POSSIBLE. EXISTING UTILITIES WILL REMAIN ACTIVE UNTIL ALL NEW FACILITIES ARE INSTALLED AND CUT OVER.

KEY

- notifications (permitting, procurement, scheduling)
- active relocation/ construction activity
- some activity
- no activity
- Project Bid (Early C&G only)
- NTP
- Contractor on-site for C&G operations
- Utility Window
- Project Bid (TBD - For visual purpose only)

**THIS BAR CHART IS FOR INFORMATION ONLY. THE PURPOSE IS TO VISUALLY SHOW THE ORDER OF UTILITY RELOCATIONS IN RELATION TO OTHER CONSTRUCTION ACTIVITY AND NEEDS. IT IS THE CONTRACTOR'S RESPONSIBILITY TO VERIFY UTILITY RELOCATION STATUS. CONTRACTOR ACTIVITY FOR THE PROJECT WILL EXTEND FURTHER THAN WHAT IS SHOWN.

US 21/ SC 51 Widening
(Updated Sept 2023)

WORK AREAS, CONTRACTOR ACTIVITY, AND PRECEDING RELOCATION REQUIRED FOR UTILITY RELOCATION

York Electric Cooperative (E1):
WO #1: SC 51 (need clearing and new alignment graded)
WO #2: Old Nations to SC 51
WO#3: Remaining US 21 (require fill efforts from prime)

Charter (TV2, T2):
WO #1: SC 51 (need clearing/grading & YEC OH)
WO #2: Old Nations to SC 48 (need clearing/grading & YEC OH)
WO #3: Remaining US 21 (need YEC OH)
WO #4: US 21 - UG from Sta 45+00 to 72+00

Verizon (T6):
WO #1: SC 51 (need clearing/grading & YEC OH)
WO #2: Old Nations to SC 48 (need clearing/grading & YEC OH)
WO #3: Remaining US 21 (need YEC OH)
WO #4: US 21 - UG from Sta 45+00 to 61+00

Zayo (T5):
WO #1: Gold Hill to SC 51 & SC 51 (need clearing/grading)
WO #2: SC 460 to Gold Hill (need clearing/grading)

Comporium (T1):
WO #1: Gold Hill to SC 51 & SC 51 (need clearing/grading)
WO #2: SC 460 to Gold Hill (need clearing/grading)

AT&T (T3):
Work is complete for Encrochment #A029Y30

Windstream:
WO #1: Adjust as needed; 1 month notification

Lumen (T4):
WO #1: Old Nations to end of SC 51 (OH) (need YEC & Tele OH
WO #2: Gold Hill to Old Nations (UG only) (need C&G)
WO #3: All remaining OH (need YEC OH & Other OH Telecoms

YCNGA (G1):
WO #1: SC 51 (need clearing & grubbing)
WO#2: All remaining relocations

York County Water/Sewer (W1/SS1):
In-contract

Fern Forest Water (T2):
In-contract (2 parts)

Clearing Priorities:
PR#1:
C&G SC51 and Flint Hill Road (new and existing); Includes rough grading new alignments of existing ground
PR#2:
C&G RT/LT Side from Gold Hill to SC 43 and cut from Sta 44+00 to 54+00 LT on US 21; Includes rough grading for new alignment for Gold Hill of existing ground
PR#3:
Remaining project

York, SC 2975

RE: Project No. P0042332/11149-004 – US21/SC51
York Co: Relocation Package – York Electric Corporation

Dear Mr. Moss –

Below you will find a brief description of the proposed work and submittal explanation. Please refer to York Electric's individual plans for details, or this document for plan status.

Scope of Work and Package Contents

Relocation Package

- Updated Utility Agreement
- Updated Detailed Cost Estimate
- Encroachment Permit Application
- Relocation Plans and associated U-sheets

Scope of Work Summary

Location	Utility Type	Scope of Work	Cost*
US21	OH poles & services	Install new primary pole line from Sta 30+00 to 45+00	York County
US21	OH poles & services	Install new primary pole line from Sta 71+00 to 100+00	York County
US21	OH poles & services	Install new primary pole line from Sta 129+00 to 132+00	York County
SC51	OH poles & services	Install new primary pole line from Sta 295+00 to 339+00	York County
Gold Hill	OH pole	Install new primary pole at Sta 15+50	York County
Old Nation	OH poles	Install new primary poles along Old Nation Road	York County

It is STV's recommendation that this relocation package be approved and proceed to the formal agreement.

Should you have any additional questions or comments, please feel free to call me (843-207-2031) or email me at natalie.roumillat@stvinc.com .

Sincerely,

N. Oriana Roumillat

Agreement # _____

UTILITY AGREEMENT

York County Project No. 11149-004 Route (or Road No.) US 21 NORTH AND HWY 51

This Agreement made this 4th day of June, 20 24 by and between

York County, hereinafter called "County" and the utility company

York Electric Cooperative, Inc.

hereinafter called "Company."

DEFINITIONS

Plans – detailed drawings or diagrams showing the stages for the relocation project

Schedule – the estimated number of days to complete each stage of the relocation project

Cost Estimate – the approximate cost of the relocation project

Actual Cost – the amount the Company pays to complete the relocation project

W I T N E S S E T H:

1. It is mutually agreed by and between the parties hereto that the Company shall perform or cause to be performed, the following work to its utility property facilities as shown on the Plans and Cost Estimate attached and incorporated into this agreement.

General description:

~~Relocate overhead and underground facilities as required for the entire project.~~

2. The Company hereby agrees to relocate its utility facilities in conflict with highway construction in accordance with the provisions set forth in the Federal Highway Administration's FAPG 23 C.F.R. § 645A and the SCDOT's "A Policy for Accommodating Utilities on Highway Rights-of-Way." The Cost Estimate is:

TOTAL $ 1,517,235.03

County Share $ 1,517,235.03 Company Share $ 0.00

(a) The Company ☑ does have the right of occupancy in its existing location by reason of holding the fee, an easement, or other real property interest or ☐ does not and is in the existing right of way by encroachment.

(b) This section of line has been in service for approximately 50 years.

(c) Such work as is necessary to relocate, alter, or maintain the facility will be done in such a manner to minimize interference with or endangering the safety of the general public in their use of the roads as a highway. Traffic control and signing will be in accordance with "The Federal Highway Administration's Manual on Uniform Traffic Control Devices for Streets and Highways".

3. The Company shall designate an employee or agent who possesses knowledge of the relocation project and authority to make decisions on behalf of the Company to serve as the Designated Contact Person. The Designated Contact Person shall attend all bi-weekly construction meetings or ensure that any temporary designee attending a bi-weekly meeting possesses knowledge of the relocation project and authority to make decisions on behalf of the Company. The County shall communicate with the Company about the relocation project through the Designated Contact Person. The Company shall notify the County in writing of any changes to the Designated Contact Person within seven calendar days of the change. The Company designates the following person as the Designated Contact Person for this project:

Name: Wes Dover
Phone Number: 803-627-0824
Email: wes.dover@yorkelectric.net

4. The County shall provide the Company written notice, by email, of the date the County intends to begin advertising the bid. The Company shall update its Schedule within forty five days after receiving written notice of the bid advertisement. The County shall provide the Company notice of the preconstruction meeting, which the Company's Designated Contact Person shall attend.

5. The Company shall begin relocation project work promptly upon receiving authorization in writing, by email, from the County and complete the work in accordance with the schedule and as promptly as is practicable. Within ten calendar days of receiving written authorization, the Company shall provide notice to the County of the date on which work is expected to begin.

6. The Company will perform the work provided for in this agreement by the method checked below, in accordance with the provisions FAPG 23 CFR § 645.115:

(●) BY COMPANY'S REGULAR FORCES

( ) BY CONTRACT: (State one of recognized reasons for necessity of performing work in this manner)

_____

_____

If the Company, subject to prior approval, proposes to contract a portion of or all of the work covered by this agreement, then the Company must submit a list of items in the Cost Estimate that will be accomplished by contract. Where the Company elects to solicit competitive bids from a list of qualified contractors rather than through advertising in a publication, the names and addresses of those contractors must be written on the Cost Estimate or furnished to the County in advance of the Company's solicitation of bids.

7. The County will reimburse the utility company for costs incurred for work performed in accordance with the Plans and Cost Estimate. The Company must provide accurate records supporting all costs incurred and submitted for reimbursement. The method of developing the relocation costs shall be one of the following alternatives.

☑ Actual and related direct costs accumulated in accordance with a work order accounting procedure prescribed by the applicable Federal or State regulatory body.

☐ Unit costs, such as broad gauge units of property, as used in own operations. (This method must have prior approval.)

The County will not pay for any components or items considered to be an upgrade unless such upgrades are required by applicable law, necessitated by the relocation, or proven to be more cost efficient.

8. All work performed by the Company shall be performed according to the plans and estimates approved by the County. The County is not obligated to reimburse the Company for any work not included in the Plans or Cost Estimate. The County Engineer may approve reimbursement for Actual Costs or additional work not included in the Plans or Cost Estimate if (1) the Actual Costs or additional work is necessary for the relocation project and (2) the Actual Costs or additional work do not exceed the Cost Estimate by more than 50%. The Company must seek and receive prior written approval before incurring costs for additional work.

9. The Plans must show the existing facilities, permanent changes to be made, and the stages by which these changes are to be accomplished. The Schedule must estimate the time required for each stage.

10. Periodic progress billings of incurred costs may be made by the Company to the County not to exceed monthly intervals and amounting to at least $2500.00; however, total progress billing payments shall not exceed the Cost Estimate or approved Actual Cost.

Upon completion of the work and no later than three months thereafter, the Company shall, at the earliest date practicable, furnish the County with five (5) copies of its final and complete billing of all costs incurred in connection with the work performed hereunder, such statement to follow as closely as possible the order of the items contained in the Cost Estimate. The totals for labor, overhead construction cost, travel expense, transportation, equipment, material and supplies, handling cost, and other services shall be shown in such a manner as will permit ready comparison with the Plans and Cost Estimates. Items of materials shall be itemized where they represent major components.

Credit shall be given for usable materials recovered from permanent or temporary installations. The final billing shall show the description and site of the project, the date on which the first work was performed; or, if preliminary engineering or right-of-way items are involved, the date on which the earliest item of billed expense was incurred, the completion date and the location where the records and accounts billed can be audited. The Company shall make adequate reference in the billing to its records, accounts, and other documents. Contractors and any subcontractors are to maintain all books, documents, papers, accounting records, and other evidence pertaining to costs incurred and to make such materials available at their respective offices at all reasonable times during the contract for inspection by the County or any authorized representatives of the County. Copies shall be furnished if requested.

Final billings submitted by the Company shall carry a statement certifying that all items claimed have been reviewed and are in conformity with the provisions of the agreement, that credits have been given for all salvaged materials as required, and that all contractor's bills have been paid in full. This statement shall be signed by an authorized representative of the Company.

In the event a final and complete billing has not been received by the County three months following the completion of work and the Company has not during that period demonstrated to the County's satisfaction a hardship in completing that billing, the County may, in its sole discretion, consider the last payment made to be the final payment due under this agreement.

11. An extreme delay means the Company failed to begin relocation project work after receiving notice from the County to begin work and caused a thirty-day delay to the entire road construction project. The County shall notify the Company in writing if the Company causes an extreme delay. The Company shall have thirty calendar days from the date of the notice to stop the delay and expeditiously work to complete the relocation project. If the Company fails to stop the delay within thirty days after receiving notice of the delay, the County may require the Company to pay the costs associated with the delay of the project. The costs may include contractor remobilization costs, traffic control costs for the time of the delay, and any other costs attributable to the Company’s delay. The County may deduct these costs from the retainage or any reimbursement owed to the Company. Should the costs of the delay exceed the amount of retainage or reimbursement owed to the Company, the County may invoice the Company for the costs of the delay, and the Company shall pay any invoices for the costs associated with extreme delays by the Company. The County may pursue any remedy available in law or equity to recover the costs of the delay.

Should a substantial hardship prevent the Company from performing the relocation project work and cause an extreme delay, the Company may apply in writing for a waiver excusing all or a portion of the delay and waiving all or a portion of the costs associated with the extreme delay. In its application, the Company shall state the cause of the delay and the time in which the Company shall resolve the hardship and continue with the relocation project work. The County Engineer shall determine whether to grant the waiver and what portion of the costs to waive.

Should a dispute arise about the cost levied upon the Company for an extreme delay, the County and the

Company agree participate in pre-litigation mediation and agree to diligently work in good faith to resolve any disputes associated with the costs charged to the Company for extreme delays. The parties shall select a mediator approved by both parties and set forth any resolutions in writing signed by both parties.

Should the parties fail to reach an agreement through pre-litigation mediation, the parties may seek a resolution for the dispute through the Court of Common Pleas located in York County, South Carolina, or the United States District Court for the State of South Carolina. This agreement shall be governed exclusively by the laws of the State of South Carolina without giving effect to its conflicts of law provisions.

12. The County shall have the right to inspect all recovered materials from the permanent facility prior to disposal by sale or scrap. This requirement will be satisfied by the Company giving notice to the County of the time and place the materials will be available for inspection. This notice is the responsibility of the Company and it may be held accountable for full value of materials disposed of without notice. The Company shall furnish a listing on final billings of major items not eligible for salvage credit and reasons therefore.

13. The Company will abide by the contract cost principles as set forth in FAPG 23 CFR 645A.

14. The Company will not participate directly or indirectly in any practice that subjects persons to discrimination because of their race, color, religion, sex, or national origin.

COMPANY: York Electric Cooperative Inc.

Show separate listing for temporary installation, removal and permanent installation. Labor on company records must be kept on daily basis showing hours worked and rates of pay.

Submit six copies with agreement.

LISTING OF CHANGES BY STATIONS:

Application for Encroachment Permit

S.C. Department of Transportation

Form 637 (Rev 09/2015)

Contact Information

Applicant: YorkElectricCooperativeInc

Street: 1385 East Alexander Love HWY

City: York

State: SC **Zip Code:** 29745

Phone: (803)628-5545 **Fax:**

Email: Tim.Scism@yorkelectric.net

Contact: Tim Scism

Project Location

Primary County: York

County	Road Name
York	**Highway 21 Byp N (US 21)**
York	**Highway 51 (SC 51)**

1. Type of Encroachment: ELECTRIC

YEC will be relocating overhead and underground facilities along US 21 North & SC 51 also maintaining prior rights. The facilities being relocated were found to be in conflict with the US 21 North Phase I and SC 51 widening project.

2. Description of Location:

The overhead and underground YEC facilities being relocated are located throughout this entire project.

(Attach sketch indicating roadway features such as: pavement width, shoulder width, sidewalk and curb and gutter location, significant drainage structure, north arrow, right of way width, and location of the proposed encroachment with respect to the roadway centerline and the nearest intersecting road on the State system.)

Customer Agreement

3. **The undersigned applicant hereby requests the SCDOT to permit encroachment on the SCDOT right of way as described herein. It is expressly understood that the encroachment, if and when constructed, shall be installed in accordance with the sketch attached hereto and made a part hereof. The applicant agrees to comply with and be bound by the SCDOT's "A Policy for Accommodating Utilities on Highways Rights of way", "Standard Specifications for Highway Construction", the "General Provisions" and "Special Provisions", attached hereto or made a part hereof by reference, during the installation, operation and maintenance of said encroachment within the SCDOT's Right of Way. DISCHARGES OF STORM WATER AND NON-STORM WATER: Work within State Highway right-of-way shall be conducted in compliance with all applicable requirements of the National Pollutant Discharge Elimination System (NPDES) permit(s) issued to the Department of Transportation (Department), to govern the discharge of storm water and non-storm water from its properties. Work shall also be in compliance with all other applicable Federal, State and Local laws and regulations, and with the Department's Encroachment Permits Manual and encroachment permit. The encroachment permit will not be issued until the applicant has received an NPDES construction permit from SC Department of Health and Environmental Control.**

The applicant agrees to comply with all current SCDOT Standards Specifications for Highway Construction including all Supplemental Technical Specifications. The applicant hereby further agrees, and binds his/her/its heirs, personal representatives, successors, assigns, to assume any and all liability for accidents or injuries to persons, or damage to property, including the highway, that may be caused by the construction, maintenance, use, moving or removing of the physical appurtenances contemplated herein, and the applicant agrees to indemnify and hold SCDOT harmless from and against any and all claims for personal injury and/or property damage, including attorney fees and costs, which may be sustained by reason of the construction, maintenance or existence of said encroachment on the SCDOT's right of way.

Applicant's Name: William T Scism **Date:** 10/22/2021

(Please print or type)

Applicant's Sig: _____ **Title:** Engineer

For Office Use Only

For Office Use Only

In accordance with your request and subject to all the provisions, terms, conditions, and restrictions stated in the application and the general and special provisions attached hereto, the SCDOT hereby approves your application for an encroachment permit. This permit shall become null and void unless the work contemplated herein shall have been completed prior to:

See Attached Special Provision and/or Permit Requirements

Agreement # _____

UTILITY AGREEMENT

York County Project No. 11149-004 Route (or Road No.) US 21 NORTH AND SC 51

This Agreement made this ~~20TH~~ 2nd day of ~~May~~ December, 20 24 by and between

York County, hereinafter called "County" and the utility company _

Zayo

hereinafter called "Company."

DEFINITIONS

Plans – detailed drawings or diagrams showing the stages for the relocation project

Schedule – the estimated number of days to complete each stage of the relocation project

Cost Estimate – the approximate cost of the relocation project

Actual Cost – the amount the Company pays to complete the relocation project

W I T N E S S E T H:

1. It is mutually agreed by and between the parties hereto that the Company shall perform or cause to be performed, the following work to its utility property facilities as shown on the Plans and Cost Estimate attached and incorporated into this agreement.

General description:

Directional Drill pulling back (3) 1.25" conduits, Pull Fiber 144 FT, Add 24x36x30 (or equivalent) Handholes, conduit- (3) 1.25" HDPE, Concrete Cut/Remove/Replace, Fiber Cable, Singlemode, 144 ct (replacing a 144ct) Single Armor, Single Jacket, Loose Tube, Zero Water Peak, Dry/Dry, Remove and abandon Existing duct run. Remove existing fiber and dispose, Remove and abandon 3 handholes.

2. The Company hereby agrees to relocate its utility facilities in conflict with highway construction in accordance with the provisions set forth in the Federal Highway Administration's FAPG 23 C.F.R. § 645A and the SCDOT's "A Policy for Accommodating Utilities on Highway Rights-of-Way." The Cost Estimate is:

TOTAL $ 507,676.00

County Share $ 507,676.00 Company Share $ 0

(a) The Company ☒ does have the right of occupancy in its existing location by reason of holding the fee, an easement, or other real property interest or ☐ does not and is in the existing right of way by encroachment.

(b) This section of line has been in service for approximately 7 years.

(c) Such work as is necessary to relocate, alter, or maintain the facility will be done in such a manner to minimize interference with or endangering the safety of the general public in their use of the roads as a highway. Traffic control and signing will be in accordance with "The Federal Highway Administration's Manual on Uniform Traffic Control Devices for Streets and Highways".

3. The Company shall designate an employee or agent who possesses knowledge of the relocation project and authority to make decisions on behalf of the Company to serve as the Designated Contact Person. The Designated Contact Person shall attend all bi-weekly construction meetings or ensure that any temporary designee attending a bi-weekly meeting possesses knowledge of the relocation project and authority to make decisions on behalf of the Company. The County shall communicate with the Company about the relocation project through the Designated Contact Person. The Company shall notify the County in writing of any changes to the Designated Contact Person within seven calendar days of the change. The Company designates the following person as the Designated Contact Person for this project:

Name: James Black
Phone Number: 719.216.8508
Email: Zayo.Relo.South_Carolina@zayo.com

4. The County shall provide the Company written notice, by email, of the date the County intends to begin advertising the bid. The Company shall update its Schedule within forty five days after receiving written notice of the bid advertisement. The County shall provide the Company notice of the preconstruction meeting, which the Company's Designated Contact Person shall attend.

5. The Company shall begin relocation project work promptly upon receiving authorization in writing, by email, from the County and complete the work in accordance with the schedule and as promptly as is practicable. Within ten calendar days of receiving written authorization, the Company shall provide notice to the County of the date on which work is expected to begin.

6. The Company will perform the work provided for in this agreement by the method checked below, in accordance with the provisions FAPG 23 CFR § 645.115:

( ) BY COMPANY'S REGULAR FORCES

(X) BY CONTRACT: (State one of recognized reasons for necessity of performing work in this manner)

Zayo is not adequately staffed and equipped to perform such relocation work with its own forces and equipment at a time convenient to and in coordination with the associated highway construction

If the Company, subject to prior approval, proposes to contract a portion of or all of the work covered by this agreement, then the Company must submit a list of items in the Cost Estimate that will be accomplished by contract. Where the Company elects to solicit competitive bids from a list of qualified contractors rather than through advertising in a publication, the names and addresses of those contractors must be written on the Cost Estimate or furnished to the County in advance of the Company's solicitation of bids.

7. The County will reimburse the utility company for costs incurred for work performed in accordance with the Plans and Cost Estimate. The Company must provide accurate records supporting all costs incurred and submitted for reimbursement. The method of developing the relocation costs shall be one of the following alternatives.

☐ Actual and related direct costs accumulated in accordance with a work order accounting procedure prescribed by the applicable Federal or State regulatory body.

☒ 4 Unit costs, such as broad gauge units of property, as used in own operations. (This method must have prior approval.)

The County will not pay for any components or items considered to be an upgrade unless such upgrades are required by applicable law, necessitated by the relocation, or proven to be more cost efficient.

8. All work performed by the Company shall be performed according to the plans and estimates approved by the County. The County is not obligated to reimburse the Company for any work not included in the Plans or Cost Estimate. The County Engineer may approve reimbursement for Actual Costs or additional work not included in the Plans or Cost Estimate if (1) the Actual Costs or additional work is necessary for the relocation project and (2) the Actual Costs or additional work do not exceed the Cost Estimate by more than 50%. The Company must seek and receive prior written approval before incurring costs for additional work.

9. The Plans must show the existing facilities, permanent changes to be made, and the stages by which these changes are to be accomplished. The Schedule must estimate the time required for each stage.

10. Periodic progress billings of incurred costs may be made by the Company to the County not to exceed monthly intervals and amounting to at least $2500.00; however, total progress billing payments shall not exceed the Cost Estimate or approved Actual Cost.

Upon completion of the work and no later than three months thereafter, the Company shall, at the earliest date practicable, furnish the County with five (5) copies of its final and complete billing of all costs incurred in connection with the work performed hereunder, such statement to follow as closely as possible the order of the items contained in the Cost Estimate. The totals for labor, overhead construction cost, travel expense, transportation, equipment, material and supplies, handling cost, and other services shall be shown in such a manner as will permit ready comparison with the Plans and Cost Estimates. Items of materials shall be itemized where they represent major components.

Credit shall be given for usable materials recovered from permanent or temporary installations. The final billing shall show the description and site of the project, the date on which the first work was performed; or, if preliminary engineering or right-of-way items are involved, the date on which the earliest item of billed expense was incurred, the completion date and the location where the records and accounts billed can be audited. The Company shall make adequate reference in the billing to its records, accounts, and other documents. Contractors and any subcontractors are to maintain all books, documents, papers, accounting records, and other evidence pertaining to costs incurred and to make such materials available at their respective offices at all reasonable times during the contract for inspection by the County or any authorized representatives of the County. Copies shall be furnished if requested.

Final billings submitted by the Company shall carry a statement certifying that all items claimed have been reviewed and are in conformity with the provisions of the agreement, that credits have been given for all salvaged materials as required, and that all contractor's bills have been paid in full. This statement shall be signed by an authorized representative of the Company.

In the event a final and complete billing has not been received by the County three months following the completion of work and the Company has not during that period demonstrated to the County's satisfaction a hardship in completing that billing, the County may, in its sole discretion, consider the last payment made to be the final payment due under this agreement.

11. An extreme delay means the Company failed to begin relocation project work after receiving notice from the County to begin work and caused a thirty-day delay to the entire road construction project. The County shall notify the Company in writing if the Company causes an extreme delay. The Company shall have thirty calendar days from the date of the notice to stop the delay and expeditiously work to complete the relocation project. If the Company fails to stop the delay within thirty days after receiving notice of the delay, the County may require the Company to pay the costs associated with the delay of the project. The costs may include contractor remobilization costs, traffic control costs for the time of the delay, and any other costs attributable to the Company's delay. The County may deduct these costs from the retainage or any reimbursement owed to the Company. Should the costs of the delay exceed the amount of retainage or reimbursement owed to the Company, the County may invoice the Company for the costs of the delay, and the Company shall pay any invoices for the costs associated with extreme delays by the Company. The County may pursue any remedy available in law or equity to recover the costs of the delay.

Should a substantial hardship prevent the Company from performing the relocation project work and cause an extreme delay, the Company may apply in writing for a waiver excusing all or a portion of the delay and waiving all or a portion of the costs associated with the extreme delay. In its application, the Company shall state the cause of the delay and the time in which the Company shall resolve the hardship and continue with the relocation project work. The County Engineer shall determine whether to grant the waiver and what portion of the costs to waive.

Should a dispute arise about the cost levied upon the Company for an extreme delay, the County and the

Company agree participate in pre-litigation mediation and agree to diligently work in good faith to resolve any disputes associated with the costs charged to the Company for extreme delays. The parties shall select a mediator approved by both parties and set forth any resolutions in writing signed by both parties.

Should the parties fail to reach an agreement through pre-litigation mediation, the parties may seek a resolution for the dispute through the Court of Common Pleas located in York County, South Carolina, or the United States District Court for the State of South Carolina. This agreement shall be governed exclusively by the laws of the State of South Carolina without giving effect to its conflicts of law provisions.

12. The County shall have the right to inspect all recovered materials from the permanent facility prior to disposal by sale or scrap. This requirement will be satisfied by the Company giving notice to the County of the time and place the materials will be available for inspection. This notice is the responsibility of the Company and it may be held accountable for full value of materials disposed of without notice. The Company shall furnish a listing on final billings of major items not eligible for salvage credit and reasons therefore.

13. The Company will abide by the contract cost principles as set forth in FAPG 23 CFR 645A.

14. The Company will not participate directly or indirectly in any practice that subjects persons to discrimination because of their race, color, religion, sex, or national origin.

Contact: James R Black

Project Location

Primary County: York

County	Road Name
York	Springfield Pkwy (SC 460)

1. Type of Encroachment: COMMUNICATIONS (Cable TV, Telephone & Other)

Relocation of existing fiber optic lines.

2. Description of Location:

us 21 North Ph1 and Sc 51 From SC 460 to the SC/NC State Line

(Attach sketch indicating roadway features such as: pavement width, shoulder width, sidewalk and curb and gutter location, significant drainage structure, north arrow, right of way width, and location of the proposed encroachment with respect to the roadway centerline and the nearest intersecting road on the State system.)

Customer Agreement

3. **The undersigned Applicant hereby requests SCDOT to permit encroachment on SCDOT right of way as described herein. It is expressly understood that every encroachment, if and when constructed, shall be installed in accordance with the sketch attached hereto and made a part hereof. Applicant agrees to comply with and be bound by SCDOT's "A Policy for Accommodating Utilities on Highways Rights of way", "Standard Specifications for Highway Construction", the "General Provisions" and "Special Provisions", attached hereto or made a part hereof by reference, during the installation, operation and maintenance of said encroachment within SCDOT's right of way.**

DISCHARGES OF STORM WATER AND NON-STORM WATER: Work within State Highway right of way shall be conducted in compliance with all applicable requirements of the National Pollutant Discharge Elimination System (NPDES) permit(s) issued to SCDOT, to govern the discharge of storm water and non-storm water from SCDOT properties. Work shall also be in compliance with all other applicable Federal, State and Local laws and regulations, and with SCDOT's Encroachment Permits Manual and the encroachment permit. The encroachment permit will not be issued until Applicant has received an NPDES construction permit from SC Department of Health and Environmental Control.

Applicant and Permittee agrees to comply with all current SCDOT Standards Specifications for Highway Construction including all Supplemental Technical Specifications. Applicant and Permittee hereby further agrees, and binds his/her/its heirs, personal representatives, successors and assigns, to assume any and all liability for accidents or injuries to persons, or damage to property, including the highway and all SCDOT facilities in the right of way, that may be caused by the construction, maintenance, use, moving or removing of the physical appurtenances contemplated herein , and Applicant and Permittee agrees to indemnify and hold SCDOT harmless from and against any and all claims for personal injury and/or property damage, including attorney fees and costs, which may be sustained by reason of the construction, maintenance or existence of Permittee's encroachment on SCDOT's right of way.

General Provisions

Application for Encroachment Permit
General Provisions

1. **DEFINITIONS: The word "Permittee" used herein shall mean the name of the person, firm, or corporation to whom this permit is addressed, his, her, its, heirs, personal representatives, successors and assigns. The word "DEPARTMENT" shall mean the South Carolina Department of Transportation.**
2. **NOTICE PRIOR TO STARTING WORK: Before starting the work contemplated herein within the limits of the highway right of way, the Department's Resident Maintenance Engineer in the county in which the proposed work is located shall be notified 24 hours in advance so that he may be present while the work is under way.**
3. **PERMIT SUBJECT TO INSPECTION: This permit shall be kept at the site of the work at all times while said work is under way and must be shown to any representative of the Department or law enforcement officer on demand.**
4. **PROTECTION OF HIGHWAY TRAFFIC: The applicant shall be responsible for the protection of the highway traffic at all times during the construction, maintenance, removing or moving of the encroachment permitted herein. Detours, barricades, warning signs and flagmen, as necessary, shall be provided by and at the expense of the Permittee and shall be in accordance with the "Manual on Uniform Traffic Control Devices" (MUTCD). The work shall be planned and carried out so that there will be the least possible inconvenience to the motoring public. The Permittee agrees to observe all rules and regulations of the Department while carrying on the work contemplated herein and take all other precautions that circumstances warrant.**
5. **STANDARDS OF CONSTRUCTION: All work shall conform to the Department's standards of construction and shall be performed in a workman-like manner. The applicant shall make adequate provisions for maintaining the proper drainage of the highway as it may be affected by the encroachment permitted herein. All work shall be subject to the supervision and satisfaction of the Department.**
6. **FUTURE MOVING OF PHYSICAL APPURTENANCES: If, in the opinion of the State Highway Engineer, it should ever become necessary to move or remove the physical appurtenances, or any part thereof contemplated herein, on account of change in location of the highway, widening of the highway, or for any other sufficient reason, such moving shall be done on demand of the Department at the expense of the Permittee.**
7. **RESTORATION OF HIGHWAY FACILITIES UPON MOVING OR REMOVING OF PHYSICAL APPURTENANCES: If, and when, the physical appurtenances contemplated herein shall be moved or removed, either on the demand of the Department or at the option of the Permittee, the highway and facilities shall immediately be restored to their original condition at the expense of the Permittee.**
8. **COSTS: All work in connection with the construction, maintenance, moving or removing of the physical appurtenances contemplated herein shall be done by and at the expense of the Permittee.**
9. **ADDITIONAL PERMISSIONS:**
   (a) It is distinctly understood that this permit does not in any way grant or release any rights lawfully possessed by the abutting property owners. The Permittee shall secure any such rights, as necessary, from said abutting property owners.
   (b) The Permittee shall be responsible for obtaining all other approvals or permits necessary for installation of the encroachment from other government entities.

(c) There shall be no excavation of soil nearer than two feet to any public utility line or appurtenant facility except with the consent of the owner thereof, or except upon special permission of this Department after an opportunity to be heard is given the owner of such line or appurtenant facility.

10. **ADDITIONAL WORK PERFORMANCE:**

(a) All crossings over the highway shall be constructed in accordance with "Specifications for Overhead Crossings of Light and Power Transmission Lines and Telegraph Lines over each other and over Highway Rights of Way in South Carolina," as approved by the Public Service Commission of South Carolina and effective as of date of this permit.

(b) All tunneling, boring, or jacking shall be done in such a way as not to disturb the highway surfacing.

(c) No pavement shall be cut unless specifically authorized herein.

(d) No excavation shall be nearer than three feet to the edge of pavement unless specifically authorized herein.

(e) Underground facilities will be located at minimum depths as defined in the "Utility Accommodations Manual" for the transmittant, generally as follows: 4 feet minimum for hazardous or dangerous transmittant, 3 feet minimum for other lines. The Department may approve shallower depths if adequate protection is provided. Such approval must be obtained in writing.

(f) Service and other small diameter pipes shall be jacked, driven, or otherwise forced underneath the pavements on any surfaced road without disturbing the pavement. The section under the highway pavement and within a distance of three (3) feet on either side shall be continuous without joints.

11. **ACCESS:**

(a) Permittee is responsible for maintaining reasonable access to private driveways during construction.

(b) It is expressly provided that, with respect to any limited access highway, the Permittee shall not have or gain access from the main traveled way of the highway, or the on or off ramps to such facility, except upon approval by the Department.

12. **DRIVEWAYS:**

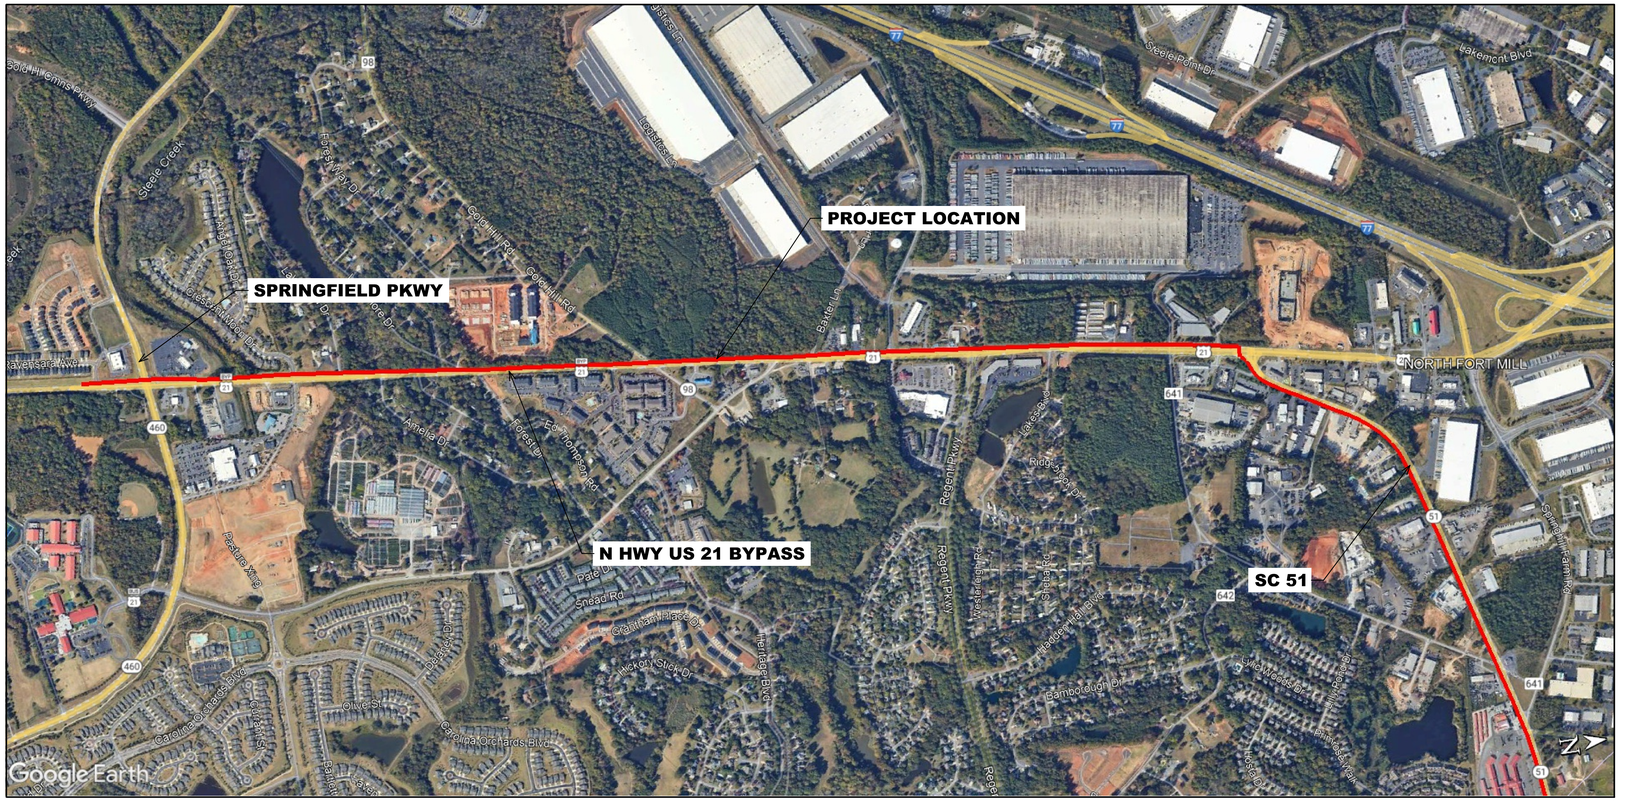
(a) The existing crown of the highway shall be continued to the outside shoulder line of the highway.

(b) If the driveway or approach is concrete pavement, the pavement shall be constructed at least 6 inches thick and with a minimum of class 2500 concrete. There shall be a bituminous expansion joint, not less than 3/4 inches in thickness, placed between the highway paving and the paving of the approach for the full width of the approach.

13. **BEAUTIFICATION:**

(a) All trees, plants, flowers, etc. shall be placed in accordance with the provisions specifically stipulated herein.

(b) All trees, plants, flowers, etc. shall be maintained by, and at the expense of, the Permittee and the provisions of this permit shall become null and void, if and when said Permittee ceases to maintain aid trees, plants, flowers, etc.



14. **AS-BUILT PLANS:**

(a) The applicant shall provide the Department with survey-quality as-built plans in accordance with the requirements set forth in the Department's "A Policy for Accommodating Utilities on Highway Rights of Way".

15. **COMPLETE STREETS:**

Reference Departmental Directive 28, "Complete Streets". For encroachment permit types that require a Traffic Impact Study (TIS), the applicant shall consider the inclusion of walking, bicycling, and transit accommodations within the scope of the encroachment. The applicant shall review walking, bicycling, and transit plans from Metropolitan Planning Organizations (MPOs), Councils of Government (COGs), and regional transit providers to determine the scope of accommodations for complete streets. Coordination with the District Permit Engineer is required to determine if the inclusion of walking, bicycling, and transit accommodations are conducive for implementation based on the scope of the encroachment.

CONSTRUCTION NOTES

1. WHERE TRENCHING TECHNIQUES ARE USED THE MINIMUM DEPTH TO THE TOP OF CONDUIT WILL BE 48” UNLESS APPROVED BY THE PROJECT ENGINEER.
2. ALL EXCAVATIONS WILL HAVE FIBER OPTIC WARNING TAPE INSTALLED A MINIMUM OF 11”BELOW FINAL GRADE.
3. WHENEVER DIRECTIONAL BORING IS UTILIZED TO INSTALL CONDUITS ALL EXCAVATIONS SHALL BE BACKFILLED PER MUNICIPALITY REQUIREMENTS.
4. UTILITIES SHOWN ARE FOR DESIGN PLANNING PURPOSES ONLY. CONTRACTOR IS TO FOLLOW THE SC 811 ONE CALL SYSTEM REQUIREMENTS FOR THE MARKING OF ALL EXISTING UTILITIES AND WORK TO RESOLVE CONFLICTS WITH THE FIELD ENGINEER. THE CONTRACTOR SHALL NOT RELY UPON ANY UTILITY LOCATION SHOWN ON THE PLAN AS A REPRESENTATION OF A UTILITY LOCATION OR ABSENCE OF EXISTING UTILITIES. CONTRACTOR IS TO TEST PIT AND EXPOSE ALL UTILITIES ALONG THE PROPOSED ALIGNMENT PRIOR TO BEGINNING OF EXCAVATION, BORING OR PLOWING.
5. CONTACT SOUTH CAROLINA 811 72 HOURS IN ADVANCE OF CONSTRUCTION AT 800-432-4770 FOR LOCATION OF BURIED UTILITIES.
6. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO HAVE ALL TRAFFIC LOOPS LOCATED. CONFIRM WITH ZAYO, WITH MUNICIPALITY CORRESPONDENCE, THAT ALL TRAFFIC LOOP LOCATIONS HAVE BEEN COORDINATED FOR MARKING.
7. AT THE END OF EACH WORK DAY CONDUIT CAPS WILL BE PLACED ON ALL VACANT DUCTS.
8. A MAXIMUM BENDING RADIUS OF 24” FOR FIBER CABLE WILL BE ADHERED TO.
9. MAXIMUM CABLE INSTALLATION TENSION SHALL NOT EXCEED 600 POUNDS.
10. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE REMOVAL AND STORAGE OF ALL SHRUBBERY TO BE REPLACED.
11. RESTORATION OF THE CONSTRUCTION AREA TO ORIGINAL OR BETTER CONDITION SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR.
12. PLACE 6” OF ¾” CRUSHED ROCK IN THE BOTTOM OF THE PIT PRIOR TO PLACING THE HANDHOLE.
13. ALWAYS HAND DIG WITHIN 2' OF UTILITIES.
14. PLACE A COIL OF SLACK IN EACH HANDHOLE/MANHOLE AS SPECIFIED.
15. EXCAVATE OUTSIDE THE DRIP LINE OF ALL TREES TO PREVENT ROOT DAMAGE.
16. CONSTRUCTION MATERIALS AND STAGING AREAS ARE NOT PERMITTED WITHIN 25' BUFFER ZONE OF WETLANDS, CREEKS, AND STREAMS.
17. THE CURB AND GUTTER IS NOT TO BE DISTURBED WITHOUT PRIOR APPROVAL.
18. IN THE EVENT THAT IT IS NECESSARY TO REMOVE ANY PORTION OF THE CURB AND GUTTER, IT IS TO BE REPLACED SEAM TO SEAM IN A MATCHING CONFIGURATION TO THE ADJACENT CURB AND GUTTER.
19. ALL CONSTRUCTION WITHIN RIGHT OF WAYS TO BE IN ACCORDANCE WITH THE UTILITY ACCOMMODATION MANUAL AND/OR SPECS.
20. RIGHT-OF-WAYS ARE DEPICTED BASED ON FIELD OBSERVATION AND THE LATEST COUNTY RECORDS AVAILABLE, CONTRACTOR MUST FIELD VERIFY. IF FURTHER ACCURACY IS REQUIRED, LAND SURVEYS WILL BE NECESSARY.

GENERAL NOTES

1. GENERAL NOTES SHALL APPLY TO ALL DRAWINGS.
2. ALL WORK SHALL COMPLY WITH APPLICABLE STATE, COUNTY, & LOCAL REGULATORY AGENCIES. INCLUDING BUT NOT LIMITED TO OSHA, SCDOT, ETC.
3. THE CONTRACTOR SHALL CONTACT THE ADJACENT PROPERTY OWNERS A MINIMUM OF 12 HOURS IN ADVANCE OF CONSTRUCTION AT THE WORK SITE.
4. ALL TRAFFIC CONTROL DEVICES SHALL BE IN PLACE BEFORE WORK IS STARTED. DEVICES NO LONGER REQUIRED SHALL BE REMOVED AS SOON AS POSSIBLE.
5. PEDESTRIAN TRAFFIC AREAS MUST BE MAINTAINED AT ALL TIMES. PEDESTRIANS MAY NOT BE REROUTED ONTO PRIVATE PROPERTY OR INTO STREETS.
6. NO EQUIPMENT OR MATERIALS SHALL BE STORED OR PERMITTED TO STAND UNPROTECTED WHERE TRAFFIC IS MAINTAINED.
7. NO EQUIPMENT OR MATERIALS SHALL BE STORED ON ROAD SURFACE DURING NON-WORKING PERIODS.
8. NO EQUIPMENT OR MATERIALS SHALL BE STORED ON SIDEWALK AT ANY TIME.
9. EXCAVATION MATERIAL SHALL BE STORED AWAY FROM THE PAVED ROADWAY, ALL SPILLED MATERIAL WILL BE REMOVED IMMEDIATELY.
10. EXISTING SIGNS, DELINEATORS, GUARDRAILS, MARKERS, TREES, SHRUBS, FENCES, WALKS, STEPS, ETC. THAT ARE DISTURBED BY THIS CONSTRUCTION SHALL BE REPLACED OR RESTORED TO THEIR ORIGINAL CONDITION OR TO THE SATISFACTION OF THE INSPECTING ENGINEER, PROPERTY OWNER, CITY, COUNTY, STATE AND/OR ANY OTHER AGENCY HAVING AUTHORITY/JURISDICTION.
11. CITY, COUNTY, STATE ROAD SIGNS, DELINEATORS, GUARDRAILS, ETC. SHALL NOT BE REMOVED. WRITTEN PERMISSION SHALL BE REQUIRED PRIOR TO ANY EXCAVATION IN THIS AREA.
12. ALL WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE CITY, COUNTY, STATE SPECIFICATIONS AND STANDARDS.
13. ALL PERSONS WHO FLAG TRAFFIC ON STATE RIGHT-OF-WAY MUST BE CERTIFIED.
14. ALL SURFACE AND SUBSURFACE RESTORATION IS TO BE IDENTICAL TO THE ADJACENT UNDISTURBED AREAS.
15. THE CONTRACTOR IS RESPONSIBLE FOR ANY UTILITY DAMAGES. WHEN ANY PERSON DAMAGES A UTILITY LINE OR PROTECTIVE COATING DURING EXCAVATION OR DEMOLITION THE ON SITE FULTON COUNTY INSPECTOR AND THE AFFECTED UTILITY WILL BE NOTIFIED.
16. ON ALL WORK ASSOCIATED WITH MUNICIPALITY PROJECTS THE RESIDENT ADMINISTRATOR OF THAT MUNICIPALITY MUST BE NOTIFIED AT LEAST 48 HRS BEFORE STARTING WORK.
17. CONTRACTOR IS RESPONSIBLE FOR ALL COMPACTING AND SEDIMENT CONTROL REGULATIONS.

** NO HANDHOLES ARE TO BE PLACED WITHIN DITCHLINES.

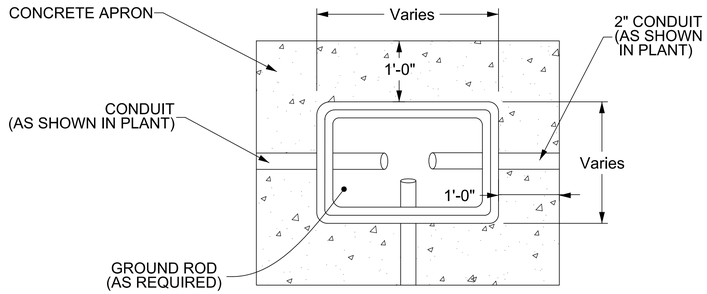
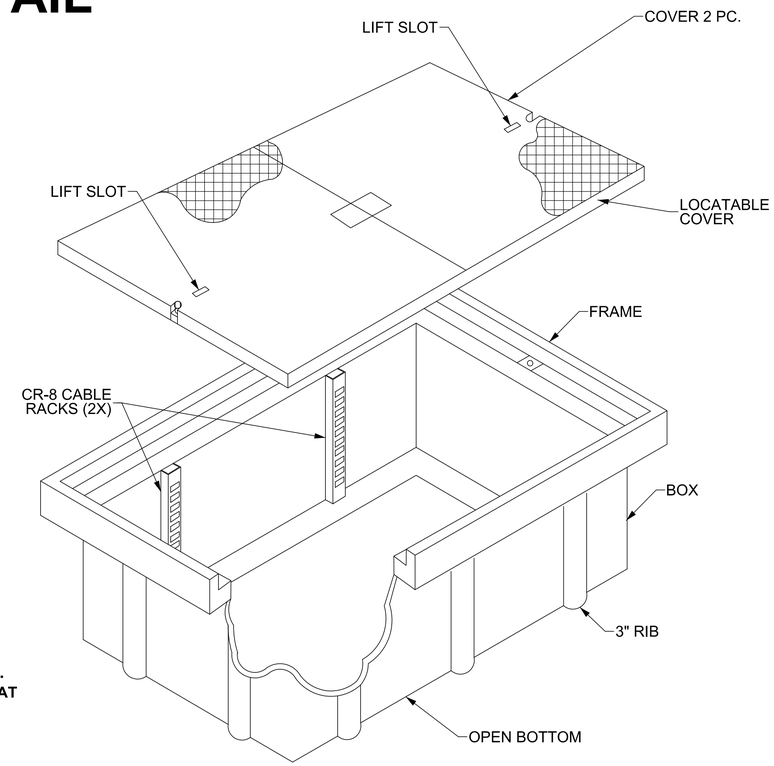
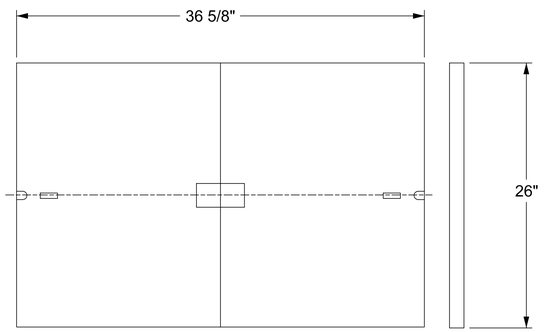
SECTION A-A



SECTION B-B

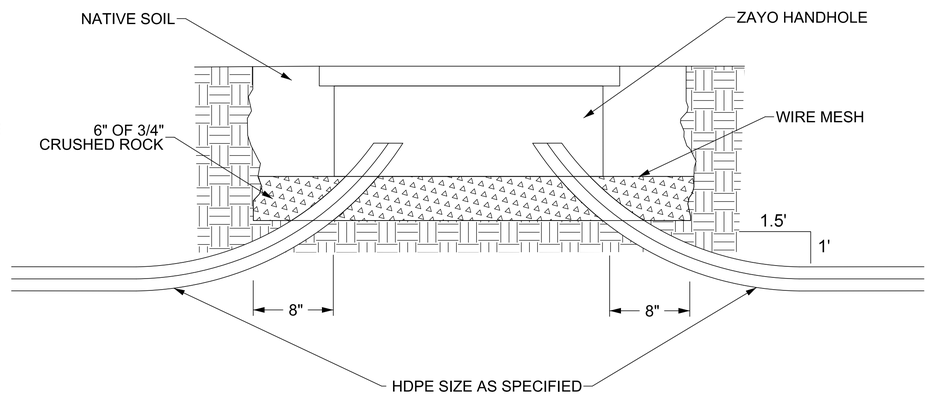


TOP VIEW



VIEW C

HANDHOLES TO BE INSTALLED PER GDOT DESIGN STANDARD 635-001. A 12" CONCRETE RING MUST BE INSTALLED AROUND HANDHOLES THAT ARE NOT PROPOSED IN CONCRETE SIDEWALK.



COVER

NOTES:

1. PLACE 6" OF 3/4" CRUSHED ROCK IN THE BOTTOM OF THE EXCAVATION.
2. WIRE MESH (TWO SQUARES PER INCH) SHALL BE PLACED OVER THE ROCK. IT WILL BE NECESSARY TO CUT OPENINGS FOR HDPE IN WIRE MESH.
3. HANDHOLE WILL BE SET FLUSH WITH EXISTING GRADE AND IN LINE WITH & CENTERED OVER R/L & BACKFILLED AS PER TYPICAL
4. HDPE SDR 11 CONDUIT SHALL BE PLACED IN THE CORNERS OF HANDHOLE.
5. TERMINATE THE HDPE CONDUIT A MINIMUM OF SIX (6) INCHES ABOVE THE WIRE MESH. DO NOT TERMINATE THE HDPE SDR 11 CONDUIT MORE THAN EIGHT (8) INCHES ABOVE THE WIRE MESH.
6. LOADING COMPLY WITH ANSI/SCTE 77. BOXES WITH DESIGN LOAD OF 22,000 LBS, & TEST LOAD OF 33,750 LBS. MEET AND/OR EXCEED TIER 15 TEST.
7. PLACE EXPANSION PLUGS IN ALL CONDUITS.
8. 95% COMPACTION IN 6" LIFTS OR 2 SACK MIX AROUND HANDHOLE.
9. NO HANDHOLES ARE TO BE PLACED WITHIN THE DITCHLINE.

ZAYO CONTRACTOR TO PLACE UG FOC AT A MIN DEPTH OF 48" OUTSIDE OF PAVEMENT AND 60" MIN UNDER PAVEMENT FROM PROPOSED FINAL GRADE

NOTES:
-ALL HANDHOLES ARE TO BE FLUSH MOUNTED.
-TRAFFIC CONTROL PLAN PER CURRENT EDITION OF SCDOT MAINTENANCE OF TRAFFIC STANDARDS.
-ALL CONSTRUCTION WITHIN RIGHT OF WAYS TO BE IN ACCORDANCE WITH THE SCDOT UTILITIES ACCOMMODATIONS MANUAL AND/OR SCDOT SPECIFICATIONS.
-PERMITTEE SHALL PROVIDE AND MAINTAIN SAFE ACCESS TO ALL ADJACENT PROPERTIES AT PEDESTRIAN TRAFFIC MOVING CLOSE AND/OR CROSSING THE WORK AREA.

CAUTION:
-RIGHT-OF-WAYS ARE DEPICTED BASED ON FIELD OBSERVATION AND THE LATEST COUNTY RECORDS AVAILABLE, CONTRACTOR MUST FIELD VERIFY. IF FURTHER ACCURACY IS REQUIRED, LAND SURVEYS WILL BE NECESSARY.
-UTILITIES SHOWN ARE FOR DESIGN PLANNING PURPOSES ONLY. CONTRACTOR IS TO FOLLOW THE SC 811 ONE CALL SYSTEM REQUIREMENTS FOR THE MARKING OF ALL EXISTING UTILITIES AND WORK TO RESOLVE CONFLICTS WITH THE FIELD ENGINEER. THE CONTRACTOR SHALL NOT RELY UPON ANY UTILITY LOCATION SHOWN ON THE PLAN AS A REPRESENTATION OF A UTILITY LOCATION OR ABSENCE OF EXISTING UTILITIES. CONTRACTOR IS TO TEST PIT AND EXPOSE ALL UTILITIES ALONG THE PROPOSED ALIGNMENT PRIOR TO BEGINNING OF EXCAVATION, BORING OR PLOWING.

NOTES:
- -ALL HANDHOLES ARE TO BE FLUSH MOUNTED.
- -TRAFFIC CONTROL PLAN PER CURRENT EDITION OF SCDOT MAINTENANCE OF TRAFFIC STANDARDS.
- -ALL CONSTRUCTION WITHIN RIGHT OF WAYS TO BE IN ACCORDANCE WITH THE SCDOT UTILITIES ACCOMMODATIONS MANUAL AND/OR SCDOT SPECIFICATIONS.
- -PERMITTEE SHALL PROVIDE AND MAINTAIN SAFE ACCESS TO ALL ADJACENT PROPERTIES AT PEDESTRIAN TRAFFIC MOVING CLOSE AND/OR CROSSING THE WORK AREA.

CAUTION:
- -RIGHT-OF-WAYS ARE DEPICTED BASED ON FIELD OBSERVATION AND THE LATEST COUNTY RECORDS AVAILABLE. CONTRACTOR MUST FIELD VERIFY. IF FURTHER ACCURACY IS REQUIRED, LAND SURVEYS WILL BE NECESSARY.
- -UTILITIES SHOWN ARE FOR DESIGN PLANNING PURPOSES ONLY. CONTRACTOR IS TO FOLLOW THE SC 811 ONE CALL SYSTEM REQUIREMENTS FOR THE MARKING OF ALL EXISTING UTILITIES AND WORK TO RESOLVE CONFLICTS WITH THE FIELD ENGINEER. THE CONTRACTOR SHALL NOT RELY UPON ANY UTILITY LOCATION SHOWN ON THE PLAN AS A REPRESENTATION OF A UTILITY LOCATION OR ABSENCE OF EXISTING UTILITIES. CONTRACTOR IS TO TEST PIT AND EXPOSE ALL UTILITIES ALONG THE PROPOSED ALIGNMENT PRIOR TO BEGINNING OF EXCAVATION, BORING OR PLOWING.

MATERIALS SUMMARY	
DESCRIPTION	QTY.
288CT FOC (FT.)	1,338
(3) 1.25" HDPE (FT.)	1,338
(3) 1.25" HDPE ABND. (FT.)	1,207
TRACER WIRE (FT.)	1,338
SPLICE KIT (EA.)	1
HH (2'X3'X2.5') (EA.)	1
GROUNDING KIT	-
FIBER MARKER POLE	-
HH REMOVED (EA.)	-

ZAYO CONTRACTOR TO PLACE UG FOC AT A MIN DEPTH OF 48" OUTSIDE OF PAVEMENT AND 60" MIN UNDER PAVEMENT FROM PROPOSED FINAL GRADE

NOTES:
- -ALL HANDHOLES ARE TO BE FLUSH MOUNTED.
- -TRAFFIC CONTROL PLAN PER CURRENT EDITION OF SCDOT MAINTENANCE OF TRAFFIC STANDARDS.
- -ALL CONSTRUCTION WITHIN RIGHT OF WAYS TO BE IN ACCORDANCE WITH THE SCDOT UTILITIES ACCOMMODATIONS MANUAL AND/OR SCDOT SPECIFICATIONS.
- -PERMITTEE SHALL PROVIDE AND MAINTAIN SAFE ACCESS TO ALL ADJACENT PROPERTIES AT PEDESTRIAN TRAFFIC MOVING CLOSE AND/OR CROSSING THE WORK AREA.

CAUTION:
- -RIGHT-OF-WAYS ARE DEPICTED BASED ON FIELD OBSERVATION AND THE LATEST COUNTY RECORDS AVAILABLE, CONTRACTOR MUST FIELD VERIFY. IF FURTHER ACCURACY IS REQUIRED, LAND SURVEYS WILL BE NECESSARY.
- -UTILITIES SHOWN ARE FOR DESIGN PLANNING PURPOSES ONLY. CONTRACTOR IS TO FOLLOW THE SC 811 ONE CALL SYSTEM REQUIREMENTS FOR THE MARKING OF ALL EXISTING UTILITIES AND WORK TO RESOLVE CONFLICTS WITH THE FIELD ENGINEER. THE CONTRACTOR SHALL NOT RELY UPON ANY UTILITY LOCATION SHOWN ON THE PLAN AS A REPRESENTATION OF A UTILITY LOCATION OR ABSENCE OF EXISTING UTILITIES. CONTRACTOR IS TO TEST PIT AND EXPOSE ALL UTILITIES ALONG THE PROPOSED ALIGNMENT PRIOR TO BEGINNING OF EXCAVATION, BORING OR PLOWING.

Healthy People. Healthy Communities

March 21, 2024

Lisa Hagwood
York County
P.O. Box 148
York, SC 29745

RE: US 21 North Phase 1 and SC51 Widening, York County
NPDES Coverage Number: SCR10ZEW6

Dear Lisa Hagwood:

The Department of Health and Environmental Control (Department or DHEC) has approved the Stormwater Pollution Prevention Plan (SWPPP) for the referenced project on **March 21, 2024**. Based on your submission of the Notice of Intent (NOI) and in accordance with the NPDES General Permit for Stormwater Discharges from Construction Activities (CGP), this project has been granted coverage under the CGP. This project's general permit coverage number is **SCR10ZEW6**. The total disturbed area for this site is **52.6 acres**.

Additional sets of final plans must be provided to the Department so that stamped, final plans are available for use on site, as required by the CGP.

- Because this project impacts waters of the U.S./State, make sure you obtain all necessary permits and certifications from USACOE and SCDHEC 401 Water Quality Certification, Standards Section before land-disturbing activities begin in those areas.
- Please ensure that any easements and permissions are obtained as necessary for any site outfalls.

The CGP can be downloaded at the following website: http://www.scdhec.gov/Environment/docs/CGP-permit.pdf or you may request a copy from us via email (stormwatercgp@dhec.sc.gov). You are responsible for ensuring your contractor(s) complies with the approved SWPPP and the minimum requirements of the CGP. Also, you are responsible for overall compliance with the Storm Water Management and Sediment Reduction Act of 1991 (1991 Act), SC Pollution Control Act, and the Federal Clean Water Act (CWA). Failure to comply with the approved SWPPP or applicable statutes and regulations may result in enforcement actions.

You must notify this DHEC EQC Regional Office prior to starting any land-disturbing activity. The address and telephone number of the EQC office are as follows:

Midlands EA Lancaster
2475 DHEC Road
Lancaster, SC 29720
803-285-7461

Inspections of this site must be performed by qualified personnel as described in Section 4.2.E of the CGP.

You should be aware that this approval is only applicable for the SWPPP that was submitted for this project. Any additional construction or land disturbing activity beyond the scope of the approved plans is not authorized. Any future work for this project not shown on the stamped, approved plans will require that you submit another site plan for review and approval. All major modifications require review and approval by the Department. Minor modifications to the approved SWPPP may be made by the SWPPP preparer and do not require review and approval by the Department; these changes should be signed and dated by the SWPPP preparer. If you have a question about whether a modification is major or minor, contact the Stormwater Permitting Section at (803) 898-4300.

A copy of the stamped, approved SWPPP (including a copy of the CGP, contractor certifications, inspection records, rainfall data, etc.), NOI, and CGP coverage letter from DHEC must be retained and available at the construction site (or accessible within 30 minutes during normal business hours) from the date of commencement of construction activities to the date of final stabilization. If an on-site location is unavailable to store the SWPPP when no personnel are present, notice of the plan's location must be posted near the main entrance at the construction site.

All contractors who will conduct land-disturbing activities at the site must complete a Contractor Certification Form. You are also responsible for listing all contractors in the SWPPP and for holding a pre-construction conference with each contractor before they can conduct land-disturbing activity at the site.

The Department may conduct periodic inspections of your site. Any violations found during these inspections may result in enforcement action.

This NPDES coverage should be terminated by the permittee when one of the conditions listed in Section 5.1 of the CGP has been met. You must submit a Notice of Termination (NOT) to cancel your NPDES coverage under the CGP. Please see section 5.1 of the CGP for additional information required to be submitted with the NOT.

You are responsible for obtaining any other federal, state, or local permit that may be required for this project. In particular, any permits through the U.S. Army Corps of Engineers for the placement of fill material in Waters of the United States. Please note we have not sent a copy of this letter to

any county or city building official. You must send a copy of this letter to these agencies, if necessary.

If material excavated during construction activities leaves the site, a mine operating permit may be needed. You are responsible for contacting the Mining and Reclamation Section to determine if a mining permit is required for the site. The Mining and Reclamation Section can be reached at (803)898-1362 or via e-mail at AskMines@dhec.sc.gov.

Please see the enclosed "Guide to Board Review" document for information about the procedures for appealing this NPDES coverage.

If you have any questions or cannot access the referenced websites, please call me at 803-898-4005.

Sincerely,

Sloan E. Jackson
Stormwater Permitting Section

CC: Guy P. Peters
Midlands EA Lancaster

Exhibit 1
South Carolina Board of Health and Environmental Control
Guide to Board Review
Pursuant to S.C. Code Ann. § 44-1-60

The decision of the South Carolina Department of Health and Environmental Control (Department) becomes the final agency decision fifteen (15) calendar days after notice of the decision has been mailed to the applicant, permittee, licensee and affected persons who have requested in writing to be notified, unless a written request for final review accompanied by a filing fee in the amount of $100 is filed with the Department by the applicant, permittee, licensee or affected person.

Applicants, permittees, licensees, and affected parties are encouraged to engage in mediation or settlement discussions during the final review process.

If the Board declines in writing to schedule a final review conference, the Department's decision becomes the final agency decision and an applicant, permittee, licensee, or affected person may request a contested case hearing before the Administrative Law Court within thirty (30) calendar days after notice is mailed that the Board declined to hold a final review conference. In matters pertaining to decisions under the South Carolina Mining Act, appeals should be made to the South Carolina Mining Council.

I. Filing of Request for Final Review

1. A written Request for Final Review (RFR) and the required filing fee of one hundred dollars ($100) must be received by Clerk of the Board within fifteen (15) calendar days after notice of the staff decision has been mailed to the applicant, permittee, licensee, or affected persons. If the 15th day occurs on a weekend or State holiday, the RFR must be received by the Clerk on the next working day.
2. RFRs should be filed on-line (scdhec.gov/FileRFR) or in person or by mail at the following address:
   South Carolina Board of Health and Environmental Control
   Attention: Clerk of the Board
   2600 Bull Street
   Columbia, South Carolina 29201
   Alternatively, RFRs may be filed with the Clerk by electronic mail (boardclerk@dhec.sc.gov).
3. RFRs shall be in writing and should include, at a minimum, the following information:
   - The grounds for amending, modifying, or rescinding the staff decision;
   - a statement of any significant issues or factors the Board should consider in deciding how to handle the matter;
   - the relief requested;
   - a copy of the decision for which review is requested; and
   - the name of the Requestor and the Requestor's mailing address, email address, if applicable, and phone number(s) at which the Requestor can be contacted. If the Requestor consists of a group of individuals, a representative of the group should be identified to receive all notices and communications related to the RFR for the group.

   All information submitted is subject to release under the Freedom of Information Act. If the RFR and accompanying documentation contain information the Requestor believes should not be released, such information should be identified.

4. The filing fee may be paid by cash, check or credit card and must be received by the 15th day. Credit card payments may be made by phone (803-898-3460, option 2) or on-line at scdhec.gov/FileRFR.
5. If there is any perceived discrepancy in compliance with this RFR filing procedure or any other procedural question, the Clerk should consult with the Chairman or, if the Chairman is unavailable, the Vice-Chairman. The Chairman or the Vice-Chairman will determine whether the RFR is timely and properly filed and direct the Clerk to (1) process the RFR for consideration by the Board or (2) return the RFR and filing fee to the requestor with a cover letter explaining why the RFR was not timely or properly filed. Processing an RFR for consideration by the Board shall not be interpreted as a waiver of any claim or defense by the agency in subsequent proceedings concerning the RFR.
6. If the RFR will be processed for Board consideration, the Clerk will send an Acknowledgement of RFR to the Requestor and the applicant, permittee, or licensee, if other than the Requestor.
7. If an RFR pertains to an emergency order, the Clerk will, upon receipt, immediately provide a copy of the RFR to all Board members. The Chairman, or in his or her absence, the Vice-Chairman shall, based on the circumstances, decide whether to refer the RFR to the RFR Committee for expedited review or to decline in writing to schedule a Final Review Conference. If the Chairman or Vice-Chairman determines review by the RFR Committee is appropriate, the Clerk will forward a copy of the RFR to Department staff and Office of General Counsel. A Department response and RFR Committee review will be provided on an expedited schedule defined by the Chairman or Vice-Chairman.
8. Following any necessary redaction, the Clerk will email the RFR to staff and Office of General Counsel and request a Department Response within ten (10) working days. If the Requestor is not the applicant, permittee, or licensee, the Clerk will email the RFR to the applicant, permittee, or licensee and give them the option of providing a response within ten (10) working days. Upon receipt of the Department Response and, if timely received, the applicant, permittee, or licensee response, the Clerk will forward the RFR and response(s) to all Board members for review, and all Board members will confirm receipt of the RFR package to the Clerk by email. The responses will also be provided by the Clerk to the Requestor and the applicant, permittee, or licensee if not the Requestor, when provided to the Board; however, questions by RFR Committee members notwithstanding, no subsequent submittals by the parties will be provided to the Board until and if a Conference is scheduled.

If a Board member does not confirm receipt of the RFR within a twenty-four (24) hour period, the Clerk will attempt to contact the Board member and confirm receipt. If a Board member believes the RFR should be considered by the RFR Committee, he or she will respond to the Clerk's email within seventy-two (72) hours and will request further review. If no Board member requests further review of the RFR within the seventy-two (72) hour period, the Clerk will send a letter by certified mail to the Requestor, with copy by regular mail to the applicant, permittee, or licensee, if not the Requestor, stating the Board will not hold a Final Review Conference. Contested case guidance will be included within the letter.
NOTE: If the time periods described in this provision end on a weekend or State holiday, the time is automatically extended to the next business day.

9. If the RFR is to be considered by the RFR Committee, the Clerk will notify the Board that further review is requested. The Board member(s) requesting further review will appear at the RFR Committee meeting to discuss the matter with the RFR Committee unless excused by the presiding member. If time allows, an RFR Committee member may submit questions to the parties via the Clerk to be answered in writing prior to the RFR Committee meeting. RFR Committee meetings are open to the public and will be public noticed at least twenty-four (24) hours in advance.
10. Following RFR Committee or Board consideration of the RFR, if it is determined no Conference will be held, the Clerk will send a letter by certified mail to the Requestor, with copy by regular mail to the applicant, permittee, or licensee, if not the Requestor, stating the Board will not hold a Conference. Contested case guidance will be included within the letter.

II. Final Review Conference Scheduling

1. If a Conference will be held, the Clerk will send a letter by certified mail to the Requestor, with copy by regular mail to the applicant, permittee, or licensee, if not the Requestor, informing the Requestor of the determination.
2. The Clerk will send Notice of Final Review Conference to the parties at least ten (10) days before the Conference. The Conference will be publicly noticed and the Notice should:
    - include the place, date and time of the Conference;
    - state the presentation times allowed in the Conference;
    - state evidence may be presented at the Conference;
    - if the conference will be held by a committee other than the RFR Committee or a designee, include a copy of the Chairman's order appointing the committee or the designee; and
    - inform the Requestor of his or her right to request a transcript of the proceedings of the Conference prepared at Requestor's expense.
3. Information submitted to the Clerk at least twenty-four (24) hours prior to the Conference will be provided to the Board for consideration prior to the Conference. Such information will also be provided to the parties. While parties may distribute handouts at the Conference, information received by the Clerk after this deadline will not be provided to the Board or the parties.
4. Slide presentations for the Conference must be provided to the Clerk at least twenty-four (24) hours prior to the Conference to allow time for uploading. Slide presentations will be provided to the Board and the parties prior to the Conference.
5. If a party requests a transcript of the proceedings of the Conference and agrees to pay all related costs in writing, including costs for the transcript, the Clerk will schedule a court reporter for the Conference.

III. Final Review Conference and Decision

1. The order of presentation in the Conference will, subject to the presiding officer's discretion, be as follows:
    - Department staff will provide an overview of the staff decision and the applicable law to include [15 minutes]:
        - Type of decision (permit, enforcement, etc.) and description of the program.
        - Parties
        - Description of facility/site
        - Applicable statutes and regulations
        - Decision and materials relied upon in the administrative record to support the staff decision.
    - Requestor(s) will state the reasons for protesting the staff decision and may provide evidence to support amending, modifying, or rescinding the staff decision. [20 minutes] *NOTE: The burden of proof is on the Requestor(s)*
    - Rebuttal by Department staff [20 minutes]
    - Rebuttal by applicant, permittee, or licensee, if not the Requestor [5 minutes]
    - Rebuttal by Requestor(s) [15 minutes]

    Note: Times noted in brackets are for information only and are superseded by times stated in the Notice of Final Review Conference or by the presiding officer.
2. Parties may present evidence during the conference; however, the rules of evidence do not apply.
3. At any time during the conference, the officers conducting the Conference may request additional information and may question the Requestor, the staff, and anyone else providing information at the Conference.
4. The presiding officer, in his or her sole discretion, may allow additional time for presentations and may impose time limits on the Conference.
5. All Conferences are open to the public.
6. The officers may deliberate in closed session.

7. The officers may announce the decision at the conclusion of the Conference or it may be reserved for consideration.
8. The Clerk will mail the written final agency decision (FAD) to parties within thirty (30) days after the Conference. The written decision must explain the basis for the decision and inform the parties of their right to request a contested case hearing before the Administrative Law Court or in matters pertaining to decisions under the South Carolina Mining Act, to request a hearing before the South Carolina Mining Council. The FAD will be sent to the parties by certified mail, return receipt requested.
9. Communications may also be sent by electronic mail, in addition to the forms stated herein, when electronic mail addresses are provided to the Clerk.

The above information is provided as a courtesy; parties are responsible for complying with all applicable legal requirements.

NOTICE OF INTENT (NOI)
For Coverage(s) of Primary Permittees Under South Carolina NPDES General Permit For Stormwater Discharges From Construction Activities SCR100000

H. Any **Flooding Problems** exist downstream of or adjacent to this site? ☐ Yes ☑ No (If yes, provide detailed description of flooding problems and applicable floodway/flood zone information in the C-SWPPP).

I. Active **S.C. DHEC Warning Notice, Notice to Comply or Notice of Violation** for this site or LCP? ☐ Yes ☑ No

J. List Relevant **State and Federal Environmental Permits or Approvals** applied for or obtained for this site (e.g., **RCRA, USACOE, Nationwide**, etc.). **If None, list None.**
SAC-2015-00812

K. **Any Waiver(s)/Variances/Exceptions Requested for this Project?** (If yes, identify below and include **Waiver Request and Justifications** in the C-SWPPP for each proposed request).

1. Small Construction Activity Waiver(s) From NPDES permitting **(Section 1.4 & Appendix B)?** ☐ Yes ☑ No
If yes, Identify requested waiver: ☐ Rainfall Erosivity Waiver ☐ TMDL Waiver ☐ Equivalent Analysis Waiver

2. Detention Waiver **(72-302(B)?** ☑ Yes ☐ No | 3. Other (Specify): _____

V. Waterbody Information (Attach additional sheet(s) as needed)

☐ **Change of Information**

A. **Receiving Waterbody(s) (RWB) Information** (List the nearest and next nearest receiving waterbodies to which the sites stormwater discharges will drain. If stormwater discharges drain to multiple waterbodies, list all such waterbodies).

1. Name of Receiving Waterbodies (RWB)	2. Distance to RWB (feet)	3. Classification of RWB
a. Nearest: UT Steele Creek	380	FW
b. Next Nearest: Steele Creek	700	FW
c. Coastal Zone ONLY: Coastal Receiving Water (CRW):		Not Applicable
d. Other Waterbodies:		

B. **Waters of the U.S. / State Information** (Attach additional sheet(s) as needed)

Waters of the U.S./ State	1. On the site?	2. Delineated/ Identified?	3. Impacts?	4. Amount of impacts
a. Jurisdictional wetlands	☑ Yes ☐ No	☑ Yes ☐ No	☑ Yes ☐ No	0.09 Ac
b. Non-jurisdictional wetlands	☑ Yes ☐ No	☑ Yes ☐ No	☐ Yes ☐ No	_____ Ac
c. Other Water(s): jurisdictional streams	☑ Yes ☐ No	☑ Yes ☐ No	☑ Yes ☐ No	_____ Ac 635 Feet
d. Coastal Zone ONLY: Direct Critical Area	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	_____ Ac _____ Feet

5. If yes for impacts in B.3, describe each impact and activity, and list all permits (e.g., USACOE Nationwide Permit, DHEC General Permit) and certifications that have been applied for or obtained for each impact:
Storm drain pipe extensions in jurisdictional streams authorized by USACOE NWP SAC-2015-00812 attached

C. **S.C. Navigable Waters (SCNW) Information (Section 2.6.5)** The Department will address any issues related to State Navigable Waters' Program under SC Regulation 19-450 during the review of the C-SWPPP for activities that will **NOT** require a 404 permit or a 401 certification. (Attach additional sheet(s) as needed).

1. Are S. C. Navigable Waters (SCNW) on the site: ☐ Yes ☑ No
a. If **no**, do not complete this question. Proceed to Section D (Impaired Waterbodies).
b. If **yes**, provide the name of S.C. Navigable Waters (SCNW) on the site: _____

2. If **yes for C.1**, will construction activities cross over or occur in, under, or thru the SCNW? ☐ Yes ☐ No
If yes, describe SCNW activities (e.g., road crossing, sub-aqueous utility line, temporary or permanent structures, etc.) and proceed to Section C.3: _____

3. Identify permits providing coverage of SCNW activities proposed for your site. If NONE, list none.

Permits/Certifications	Permit or Certification No.	Corresponding Covered SCNW Activity(ies)
a. DHEC General/ Other DHEC Permit		
b. USACOE 404 Permit or 401 Certification		
c. SCNW Permit If applied for or issued, identify **Date applied for or issued:** _____		☐ **All Activities** or ☐ **Some Activities (Describe):**

d. If a SCNW Permit has NOT been applied for provide an additional plan sheet that shows plan and profile views (drawn to scale) of the SCNW and associated activities. Include a description of all proposed activities on this plan.

D. **Impaired Waterbodies Information** (Attach additional sheet(s) as needed)

1. 303(d) Listed Impaired Waterbodies

a. Name of **Nearest DHEC Water Quality Monitoring Stations (WQMS)(s)** that receives stormwater from your construction site and/or thru an MS4 and the **Name of the Corresponding Waterbody?**		b. **Is this WQMS(s) listed on the most current 303(d) List? If No, proceed to Section 2 of this table. If Yes, complete items c thru f.**	c. List the pollutant(s) identified as **"CAUSES"** of the impairment	d. Will any pollutants causing the impairment be present in your site's construction stormwater discharges?	e. If **yes for d**, list the **"USE SUPPORT"** impairment(s) affected by the pollutant(s) identified in c.
Nearest DHEC WQMS(s)	**Corresponding Waterbody**				
CW-681	Steele Creek	☐ Yes ☑ No		☐ Yes ☑ No	
		☐ Yes ☑ No		☐ Yes ☑ No	
		☐ Yes ☐ No		☐ Yes ☐ No	

f. If **yes for d** above, **will use of the BMPs proposed for your project ensure the site's discharges will NOT contribute to or cause further WQS violations for the impairment(s) listed in c?** ☐ Yes ☐ No
(NOTE: If no for f, this site is NOT eligible for coverage under the CGP). See Instructions.

2. TMDL Impaired Waterbodies

a. Name of **Nearest DHEC Water Quality Monitoring Stations (WQMS)(s)** that receives stormwater from your construction site and/or thru an MS4?	b. Has a TMDL(s) been developed for this WQMS(s)? **If No, identify as such below and proceed to Section VI. If Yes, complete items c thru f of this table.**	c. **If yes for b,** what pollutants are listed as "CAUSES" or causing the impairment?	d. If **yes for b**, has the standard been **"ATTAINED" or " Fully Supported"** for the impairment(s)?	e. If **no for d (Not Attained),** will any pollutants causing the impairment be present in your site's construction stormwater discharges?
CW-203	☐ Yes ☑ No	fecal coliform	☐ Yes ☐ No	☐ Yes ☐ No
	☐ Yes ☑ No		☐ Yes ☐ No	☐ Yes ☐ No
	☐ Yes ☐ No		☐ Yes ☐ No	☐ Yes ☐ No

f. If **yes for e** above, **are your discharges consistent with the assumptions and requirements of the TMDL(s)?** ☐ Yes ☐ No
(NOTE: If no for f, this site is NOT eligible for coverage under the CGP). See Instructions.

VI. Signatures and Certifications

DO **NOT** SIGN IN BLACK INK! **Read the Certifications below (in entirety). Provide date, printed name, and signatures below.** If you are a **New Owner/Operator,** as Primary Permittee you must also sign and date the applicable Comprehensive SWPPP Acceptance & Compliance Agreement below.

C-SWPPP PREPARER: "One copy of the C-SWPPP, all specifications and supporting calculations, forms, and reports are herewith submitted and made a part of this application. I have placed my signature and seal on the design documents submitted signifying that I accept responsibility for the design of the system. Further, I certify to the best of my knowledge and belief that the design is consistent with the requirements of Title 48, Chapter 14 of the Code of Laws of SC, 1976 as amended, pursuant to Regulation 72-300 et seq. (if applicable), and in accordance with the terms and conditions of SCR100000." **(This should be the person identified in Section III).**

Guy P. Peters, PE, CFM — **Printed Name of C-SWPPP Preparer**

Guy P. Peters — **Signature of C-SWPPP Preparer**

21220 — **S. C. Registration #**

PRIMARY PERMITTEE: "I or I (on behalf of my company and its contractors and agents), as the case may be, certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I understand that DHEC enforcement actions may be taken if the terms and conditions of the C-SWPPP are not met and I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

"I or I (on behalf of my company and its contractors and agents), as the case may be, also hereby certify that all land-disturbing construction and associated activity pertaining to this site shall be accomplished pursuant to and in keeping with the terms and conditions of the approved plans and SCR100000. I also certify that a responsible person will be assigned to the project for day-to-day control. I hereby grant authorization to the to S. C. Department of Health and Environmental Control (DHEC) and/or the local implementing agency the right of access to the site at all times for the purpose of on site inspections during the course of construction and to perform maintenance inspections following the completion of the land-disturbing activity." **(See Section 122.22 of S.C. Reg. 61-9 for signatory authority information.)** Having understood the above information, I am signing this certification as Primary Permittee to the aforementioned NPDES general permit."

Lisa W. Hagood, PE — **Printed Name of Primary Permittee**

Section 1 PROJECT OVERVIEW

1.1 Narrative (CGP Section 3.2.1)

Construction Activities and BMP Summary

York County has contracted STV Incorporated to provide professional engineering services for the proposed US 21 and SC 51 improvement project. The project extends along US 21 from SC 460 north to the newly aligned SC 51 and extends along SC 51 to the North Carolina / South Caroline state line. The project area is noted in Figure 1.1, shown below.

The sediment and erosion control structures for this project consist of silt fence, sediment tubes, sediment basins, inlet filters, and outlet protection. Proposed stormwater conveyances, consisting of grass lined channels and ditch berms will address permanent water quality.

The project will widen US 21 for approximately 12,000 feet, disturbing existing pavement and grading shoulders within the proposed construction limits. The approximate total disturbed area is 49.0 acres. Proposed construction along the route will affect wetlands in the area.

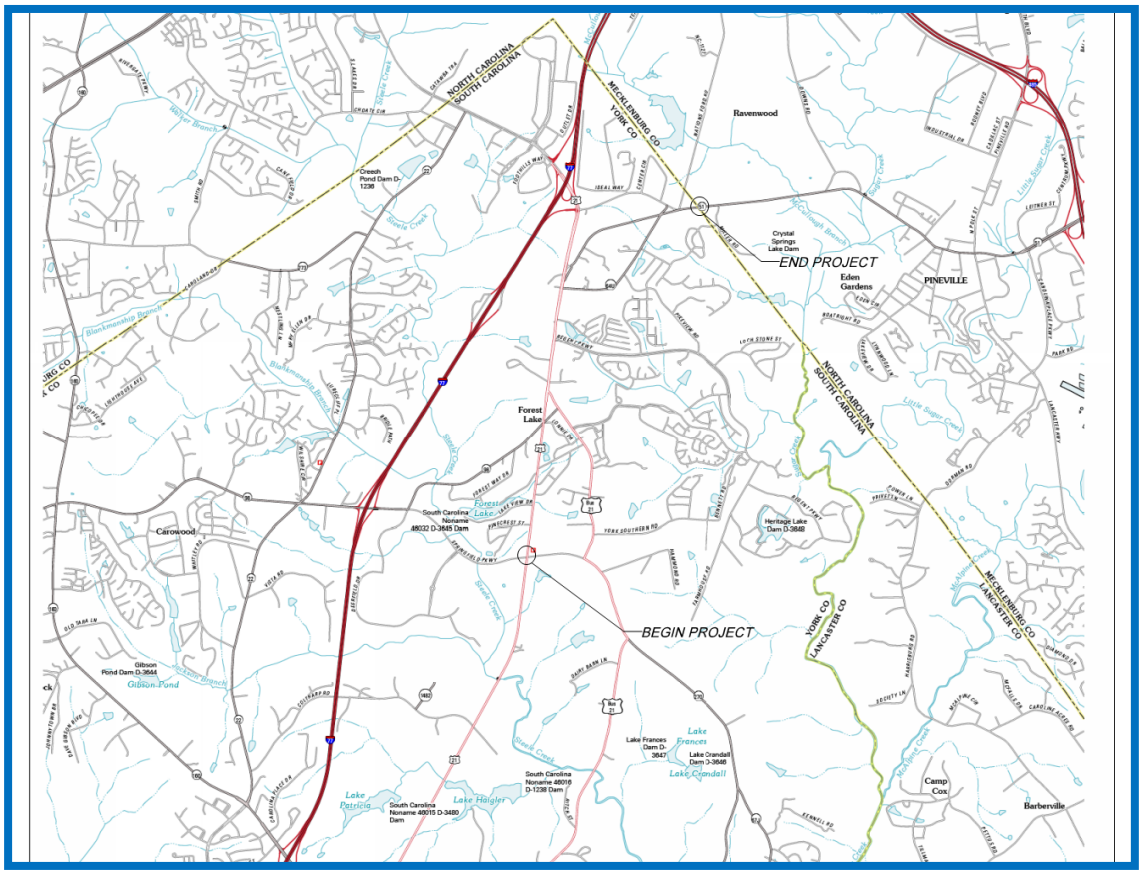

Figure 1.1: Project Location

Pre-Development Conditions

The project is located north of the town of Fort Mill in York County, South Carolina. The project area is rolling terrain with elevations ranging from 583 to 671 feet above sea level. The existing ground gradients typically range from 0.1 to 14 percent. The existing site soil features, as identified by The United States Department of Agriculture NRCS Web Soil Survey of York County, South Carolina, consist predominantly of loamy sands and clay loam. Additional soils information and a soils map are in Appendix E, Stormwater Management Design Study.

The existing on-site drainage is predominantly collected in roadside ditches that drain toward Steele Creek to the west and Sugar Creek to the east. Both Steele and Sugar Creeks are the project's ultimate outfalls and are located directly to the west and east respectively of the project. In general, runoff flows north and south along this state road and then is directed to either of these two creeks via existing channels.

Post-Development Conditions

Post-development conditions will closely mimic existing conditions. Minor widening of existing roadway will technically increase peak runoff, but the amount is negligible when compared to runoff from the existing pavement. The existing outfalls will be maintained and will accept the proposed project's drainage. Existing grass lined channels will be utilized where feasible and permanent vegetation will be established on disturbed soil areas after the construction has been completed. Peak discharge increases will not impose any adverse impacts to Steele Creek or adjoining properties. Please also refer to Section 1.6 – Certification Statement and Detention Waiver.

Pre vs. Post Development Peak Discharges Comparison Table

Outfall ID	2-Yr Pre (cfs)	2-Yr Post (cfs)	10-Yr Pre (cfs)	10-Yr Post (cfs)
Outfall 1	40	86	75	145
Outfall 2	45	30	108	84
Outfall 3	106	112	220	227
Outfall 4	3	4	8	9
Outfall 5	2	2	6	7
Outfall 6	24	18	45	35
Outfall 7	11	7	18	13
Outfall 8	1	1	3	2
Outfall 9	8	8	15	15
Outfall 10	7	9	20	22
Outfall 11	83	86	177	182
Outfall 14	36	50	82	102

Outfall 15	2	1	4	3
Outfall 16	4	1	8	3
Outfall 17	2	1	4	3
Outfall 18	1	1	2	2
Outfall 19	28	17	57	33
Outfall 20	2	2	5	5

Please see Appendix E of the Stormwater Management Design Study for further information. *The Stormwater Management Design Study is wholly contained in Appendix E of this SWPPP.*

As shown in SCDOT and consultant correspondence contained in Appendix E, York County and the designer were urged in the strongest terms by SCDHEC to design the project such that peak flows at outfalls draining to Forest Lake - a private man-made lake/dam/residential development - will not be increased in the post-development condition. The design meets that objective by reallocating discharges from Outfall 2 and 3 to Outfalls 1 and 6 respectively.

Flooding Issues

The existing overall topography will not be modified and there is no anecdotal evidence of flooding issues on – or adjoining – the project. The drainage paths through the watershed are well-established. The project is located outside the FEMA mapped floodplain as shown on Federal Government Emergency Management Agency Flood Insurance Rate Maps (FEMA FIRM). See Appendix E, Stormwater Management Design Study for further information. There are no foreseeable flooding issues that would arise due to the proposed road widening.

1.2 Stormwater Management and Sediment Control (CGP Section 3.2.2)

Erosion Prevention BMPs

As the existing site is cleared, grubbed, and graded to the proposed elevations shown on the construction plans, erosion prevention BMPs shall be placed throughout the construction site to aid in the prevention of sediment-laden stormwater runoff. These BMPs shall be focused in areas with high potential of erosion, areas preceding infiltration practices, and shall be applied to all steep slopes (i.e., slopes equal to or greater than 3H:1V).

Each erosion prevention measure shall be selected on a site-specific basis and details have been provided on the construction plans (see Appendix J). The plans identify all proposed Erosion Prevention BMPs and the recommended installation, maintenance and inspection procedures.

Examples of Erosion Prevention BMPs are, but are not limited to, surface roughening, temporary seeding, erosion control blankets, turf reinforcement mats, sodding, riprap, outlet protection, dust control and polyacrylamide (PAM). Information on the design and

proper use of Erosion Prevention BMPs can be located in the SC DHEC's BMP Handbook, and Standard Drawings. The primary erosion control devices employed for Stage 1 of the project are rolled erosion control blankets, sediment basins, rock check dams (ditch checks), silt fence and inlet protection.

Sediment Control BMPs

Sediment Control BMPs are designed to remove some of the sediment accumulated within stormwater runoff, to the best extent practicable. These BMPs help prevent sediment impacts to adjacent properties and water bodies from stormwater discharges originating from construction sites.

Typically, these BMPs are placed near each of the site's outfalls and are installed prior to clearing and grubbing of the site (before large areas of soil are exposed). However, these BMPs can also be located throughout the construction site and, in these circumstances, are installed after mass grading has occurred. Placement, sizing and modifications of Sediment Control BMPs should be left to the SWPPP preparer and/or the Site Engineer. Contractors must consult the SWPPP Preparer as listed at the front of this SWPPP before making any significant changes to these BMPs.

Each sediment control BMP shall be selected on a site-specific basis. Examples of Sediment Control BMPs are, but are not limited to sediment traps, sediment basins, silt fence, rock check dams, rock sediment dikes, sediment tubes and inlet protection. Please consult SC DHEC's BMP Handbook for more information on Sediment Control BMPs.

Structural Control BMPs and Floodplain Placement

This site-specific SWPPP utilizes the following structural control BMPs: permanent vegetated swales and storm sewer systems. These practices have been designed to either divert flows from exposed soils to retain/detain flows, and to otherwise limit the runoff and the discharge of pollutants from disturbed areas of the construction site.

Throughout the lifespan of the construction project these BMPs will be installed and maintained, as required by the SWPPP and the construction plans, until final stabilization has been achieved for the areas draining to each BMP. Upon final stabilization, each structural control BMP must be modified to the post-construction conditions shown within the approved construction site plans or removed, if the structural BMP was a temporary structure.

No Structural Control BMPs are proposed within any 100-yr floodplains for the project.

Construction Entrances and Dust Control

Each access area into and out of the limits of disturbance, will incorporate a construction entrance. Access locations will be determined in the field by the contractor. The use of this BMP will limit the amount of sediment being transported by construction vehicles onto existing roadways or other impervious areas. Any tracked sediment, along with any attached pollutants, deposited on impervious areas could be washed downstream during the next rain event. Each construction entrance must be installed as shown in the details section of the construction plans.

If a new entrance or exit is required, that is not shown on the plans, install the construction entrance as noted by the construction entrance detail, mark the location on the plans and make a record of this minor modification in the SWPPP's modification log, which is located within one of the appendices of the On-site SWPPP.

Roads where vehicles are utilizing construction accesses will be monitored for sediment tracking and accumulated sediments will be removed from the road surface. Maintenance of roads shall be conducted as needed throughout shiftwork and at the end of each shift.

During extremely dry conditions, drought, and/or excessive winds, the construction site should be treated for dust control to prevent the suspension of fine sediment particles into the air, being carried offsite, and deposited on adjacent properties or surface waters. This practice may not be directly called out for on the construction plans. A water tanker used to spray the soil down may be an effective way to prevent excessive dust at a construction site.

Water Quality BMPs During Construction

Site-specific water quality BMPs (e.g., sediment basins, sediment traps, rock check dams, and rock sediment dikes) must be installed prior to the mass clearing, grubbing and grading of the site, and must be kept in functioning order throughout the lifespan of all construction activities. Each of these BMPs must be maintained and inspected until all areas draining to these BMPs have reached final stabilization, approved by the construction site inspector or the SWPPP Preparer and recorded within the stabilization log located as an appendix of the On-site SWPPP.

The location, installation procedures, and maintenance procedures for each water quality BMP can be found within the approved construction site plans.

Post-Construction Water Quality

All construction sites disturbing 5 acres or more, including construction activities associated with Larger Common Plans disturbing 5 acres or more (for sites located within an MS4 this may be 1 acre or more), must be designed to treat water quality post-construction. These water quality controls must be installed and stabilized prior to terminating coverage under the CGP. These controls will require routine maintenance to remain functional. This is to be conducted by the Primary Permittee or the entity that accepts responsibility for these structures once construction has been completed. Additional information, including permanent maintenance and inspection procedures, can be found in Appendix E of the OS-SWPPP or within the construction site plans.

Upon final stabilization, each construction site will have to make the transition from temporary BMPs to permanent BMPs. This transition may include the conversion of a sediment basin to a detention basin, a sediment trap to a bioretention area, or diversion swales to permanently vegetated swales. All post-construction (permanent) water quality and water quantity BMPs are identified in the final phase of the Erosion and Sediment Control or drainage sheets located within the construction plans.

Other Stormwater Management Procedures

Based on the nature, conditions, and/or procedures associated with this construction site, the following items must be followed and adopted by all those conducting land disturbing activities at this site:

- All construction debris must be stockpiled in designated areas, which have been provided with the proper BMPs to prevent the discharge of pollutants through stormwater runoff from building or other similar materials off-site or into surface waters.
- Any additional waste material or stockpile material (i.e., soil and mulch) must also be stored in the designated areas as shown on the Construction Site Plans or as the contractor, responsible for day-day activities at this site, deems appropriate. Silt fence or an approved equal shall surround all stockpiled materials.
- All parties conducting work at this construction site must be informed of and make note of pollutant sources, both industrial and construction, at this site, and be informed of all controls and measures the will be implemented to prevent the discharge of these pollutants in stormwater runoff.
- Any additional non-stormwater discharges, as referenced in the CGP, should be eliminated or reduced to the maximum extent feasible. All unpreventable non-stormwater discharges shall be treated through the approved stormwater management system before release off-site. Following is a list of allowable non-stormwater discharges:
  - Fire hydrant flushing
  - Wash water without detergents
  - Water used for dust control
  - Potable water
  - Building wash down water without detergents
  - Uncontaminated pavement wash water
  - Uncontaminated condensation from mechanical equipment
  - Uncontaminated ground or spring water
  - Water from foundation of footing drains
  - Uncontaminated excavation dewatering
  - Landscape irrigation.

1.3 Sequence of Construction

The construction sequence for this project has been provided on the construction site plans, provided in Appendix J. Each item/step of that construction sequence has been listed is the sequence that they should be implemented.

For additional information or questions on the sequencing please contact the SWPPP Preparer or the Permittee referenced on the cover of this SWPPP.

1.4 Non-Numeric Effluent Limits

Stormwater Volume and Velocity Control

During the implementation of construction activities, all parties performing work at this construction site whose work may affect the implementation of the SWPPP must be informed of and directed on how to comply with this non-numeric effluent limit, which requires the management of stormwater runoff within the construction site and at each outfall. The purpose of this requirement is to control the stormwater volume and velocity at these locations to minimize erosion.

Specifically, each responsible party should be made aware of the practices that have been or should be implemented at the construction site to accomplish these stormwater management practices. Below is a list of practices that may be utilized within the disturbed area and at each outfall at construction sites to control stormwater volume and velocity:

Volume Control

- Limiting the amount of disturbed area and exposed soils
- Staging and/or phasing of the construction sequence.
- Sediment basins and sediment traps
- Diverting off-site flow around the construction site.
- Controlling the drainage patterns within the construction site.
- Temporary stabilization of disturbed areas.

Velocity Control

- Surface roughening and/or another slope stabilization practice.
- Level spreaders, riprap plunge pools and/or other velocity dissipation BMPS located at the construction site and sediment basin outfalls.
- Use of rock checks, sediment tubes, etc. in temporary diversions swales and ditches.
- Use of erosion control blankets, turf reinforcement mats, and other non-vegetative BMPs that can be used to quickly stabilize disturbed areas.

The SWPPP Preparer/Engineer should approve any modifications (Additional BMPs or changes to existing BMPs) to address the management of stormwater volume and velocity prior to implementation. All approved SWPPPs that were issued coverage under

the CGP should include ample BMPs and other control measures to address this specific non-numeric effluent Limit.

Soil Exposure, Compaction and Preservation

Throughout construction activities, the amount of soil exposed during construction should be kept to a minimum. This may be accomplished by minimizing the amount the disturbed area within the permitted Limits of Disturbance (shown on the approved construction site plans) to only that which is necessary to complete the proposed work. For areas that have already been disturbed and where construction activities will not begin for a period of 14 days or more, temporary stabilization techniques must be implemented.

Prior to implementation of any major grading activities, topsoil is to be preserved by placing it in areas designated for stockpiling until final grades are reached. Each stockpile must be equipped with proper sediment and erosion controls to preserve the topsoil and protect adjacent areas from impacts. Once final grades have been reached, the preserved topsoil should be utilized to apply to areas identified for stabilization. Topsoil contains nutrients and organisms that aid in the growth of vegetation.

Soil compaction should also be minimized to the degree practicable during grading activities. This is especially important during the replacement of topsoil to aid in a quick establishment of vegetative cover. Soil compaction may also reduce rainfall's ability to infiltrate into the soil, increasing the amount of stormwater runoff.

Soil Stabilization

Throughout construction activities, soil stabilization techniques are to be initiated as soon as practicable whenever any clearing, grading, excavating, or other land-disturbing activities have permanently or temporarily ceased on any portion of the construction site and will not resume for a period exceeding 14 calendar days. For areas where initiating stabilization measures is infeasible, (e.g., where snow cover, frozen ground, or drought conditions preclude stabilization), initiate vegetative or non-vegetative stabilization measures as soon as practicable.

Steep Slopes (Slopes of 30% grade or greater)

All disturbed steep slopes (30% grade, ~3H:1V, or greater), and steep slopes to be created through grading activities must be managed in a fashion that limits the potential of erosion along the slopes. All parties whose work is/was responsible for the creation/disturbance of steep slopes must comply with the following items:

- Minimize the disturbance of all steep slopes, when possible.
- Divert concentrated or channelized flows of stormwater away from and around steep slope disturbances.
- Use specialized BMP controls including temporary and permanent seeding with soil binders, erosion control blankets, surface roughening, reducing continuous slope length with terracing or diversions, gradient terraces, interceptor dikes and swales, grass-lined channels, pipe slope drains, subsurface drains, level spreaders, check

dams, seep berms, and triangular silt dikes to minimize erosion.

- Initiate stabilization measures as soon as practicable on any disturbed steep slope areas where construction activities have permanently or temporarily ceased and will not resume for a period exceeding 7 calendar days.
- A vegetative and/or non-vegetative cover must be established within 3 working days from the time that stabilization measures were initiated.

Stabilization of steep slopes should be a priority for those performing work at the construction site. At the very least, runoff control BMPs should be implemented to transport stormwater runoff from the top of the slope to the toe of the slope. An example of this is to install diversion swales along the top of slope and direct the runoff towards pipe slopes drains to transports the runoff to the toe of the slope. All pipe slope drain outlets are to be equipped proper outlet protection.

Sediment Discharge Minimization

Permittees, contractors, and all other parties responsible for conducting land-disturbing activities are required to install and maintain all erosion and sediment BMPs that are identified on the approved construction site plans. These BMPs have been designed and approved to address such factors as the amount, frequency, intensity and duration of precipitation, the nature of resulting stormwater runoff, and soil characteristics, including the range of soils particle sizes expected to be present on the construction site. Proper installation, inspection, and maintenance will allow these BMPs to operate at maximum efficiencies in order to minimize sediment discharges to the maximum extent practical.

Pollutant Discharge Minimization

Permittees, Contractors, and all other parties responsible for conducting land-disturbing activities are required to install, implement, and maintain effective pollution prevention measures to minimize the discharge of pollutants. At a minimum, the following items must be implemented:

- Minimize the discharge of pollutants from dewatering trenches and excavations by managing runoff with the appropriate controls. Otherwise these discharges are prohibited;
- Minimize the discharge of pollutants from equipment and vehicle washing, wheel wash water, and other wash waters. Wash waters must be treated in a sediment basin or alternative control that provides equivalent or better treatment prior to discharge;
- Minimize the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste and other materials present on the site to precipitation and to stormwater; and
- Minimize the discharge of pollutants from spills and leaks and implement chemical spill and leak prevention and response procedures.

Prohibited Discharges

Permittees, Contractors, and all other responsible parties for conducting land-disturbing activities are prohibited to discharges, from the construction site, the following items:

- Wastewater from washout of concrete, unless managed by an appropriate control;
- Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds and other construction materials;
- Fuels, oils, or other pollutants used in vehicle and equipment operation and maintenance; and
- Soaps or solvents used in vehicle and equipment washing.

1.5 Buffer Zone Management

There are no buffer zones to be located or maintained associated with this project.

1.6 Certification Statements & Detention Waivers - following

Detention Waiver – Outfall 1

I have placed my signature and seal on the design documents submitted signifying that I accept responsibility for the design of the system. Further, I certify to the best of my knowledge and belief that the design is consistent with the requirements of Title 48, Chapter 14 of the Code of Laws of SC, 1976 as amended, pursuant to Regulation 72-300 et seq. (if applicable), and in accordance with the terms and conditions of SCR100000.

The 2-year and 10-year storm event pre- and post-development peak flows were compared at the Mimosa Lane (OP 010) outfall for this project. Pre and post development flows were computed by the SCS peak flow estimation method. Because post-development flows equal pre-development flows in both the 2- and 10-year storms, the post-development discharge will not result in adverse impacts to the downstream receiving waterbody and/or downstream properties.

Title: Senior Engineer

Date: 22 December 2023

A copy of this certification statement and detention waiver has been included under a separate cover as requested by SCDHEC.

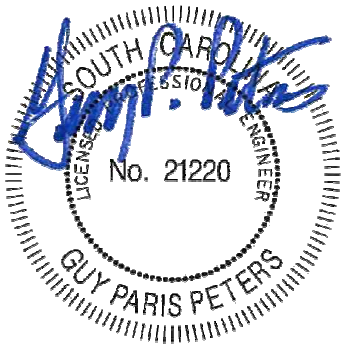
Detention Waiver – Outfall 6



I have placed my signature and seal on the design documents submitted signifying that I accept responsibility for the design of the system. Further, I certify to the best of my knowledge and belief that the design is consistent with the requirements of Title 48, Chapter 14 of the Code of Laws of SC, 1976 as amended, pursuant to Regulation 72-300 et seq. (if applicable), and in accordance with the terms and conditions of SCR100000.

The 2-year and 10-year storm event pre- and post-development peak flows were compared at the Mimosa Lane (OP 010) outfall for this project. Pre and post development flows were computed by the SCS peak flow estimation method. Because post-development flows equal pre-development flows in both the 2- and 10-year storms, the post-development discharge will not result in adverse impacts to the downstream receiving waterbody and/or downstream properties.

Section 2

SITE FEATURES AND SENSITIVE AREAS

2.1 Sources of Pollution

Throughout construction activities, each permittee, contractor, and person responsible for conducting work will need to ensure that sources of pollution are managed to prevent their discharge from the construction site. Expected pollution sources during construction have been identified in Table 2.1, but due to the nature of construction activities, it is often tough to predict all pollution sources that may appear throughout the life of a construction project. For that reason, the following table has also been provided to help all those performing work at this construction site identify possible sources of pollution

Stormwater runoff subjected to the identified pollution sources must be treated by the appropriate BMPs as directed by this SWPPP.

In the event that any additional sources of pollution are identified during construction, the person(s) with day-to-day operational control at the site is to add the new source(s) to Table 2.1 and consult with the SWPPP Preparer to properly address this source and to prevent the discharge of its pollutant through stormwater runoff.

Table 2.1: Potential Sources of Pollution

Source	Material or Chemical	Location*	Appropriate Control Measures
Loose soil exposed/disturbed during clearing, grubbing and grading activities	Sediment	All areas within the Limits of Disturbance	As directed by the construction Plans. This includes Silt Fence, sediment tubes, sediment basins, and sediment traps.
Areas where construction equipment are cleaned, a.k.a. concrete washout	Heavy Metals & pH	Selected locations as needed	Concrete Washout Basin.
Water encountered during trenching	Nutrients & Sediment	In and around any trenching activities.	Direct water into filter bags and/or impoundments such as basins or traps to allow for the sedimentation of the listed pollutants.
Material Delivery and Storage Areas	Nutrients, pH, Sediment, Heavy Metals, oils & grease	All areas used as storage areas	Silt fence and/or sediment dikes
Equipment fueling and maintenance areas	Metals, hydrocarbons, oils and greases	Areas surrounding fuel tanks	Provide secondary containments, locate in upland areas. Repair leaking and broken hoses.
Paints	Metal oxides, solvents, talc, calcium-carbonate, arsenic	Throughout site, primarily in areas of building construction	Wash-water should be contained and is prohibited from being discharged

*Area where material/chemical is used on site.

2.2 Surface Waters

Stormwater runoff from the proposed construction site will discharge into existing drainage systems as identified in Section 1. These outfalls discharge to both Steele Creek to the west and Sugar Creek to the east. Ultimately, both these waterways make their way to the Catawba River. The overall general flow paths are shown below in Figure 2.1 with dark blue arrows and the project area shown in red.

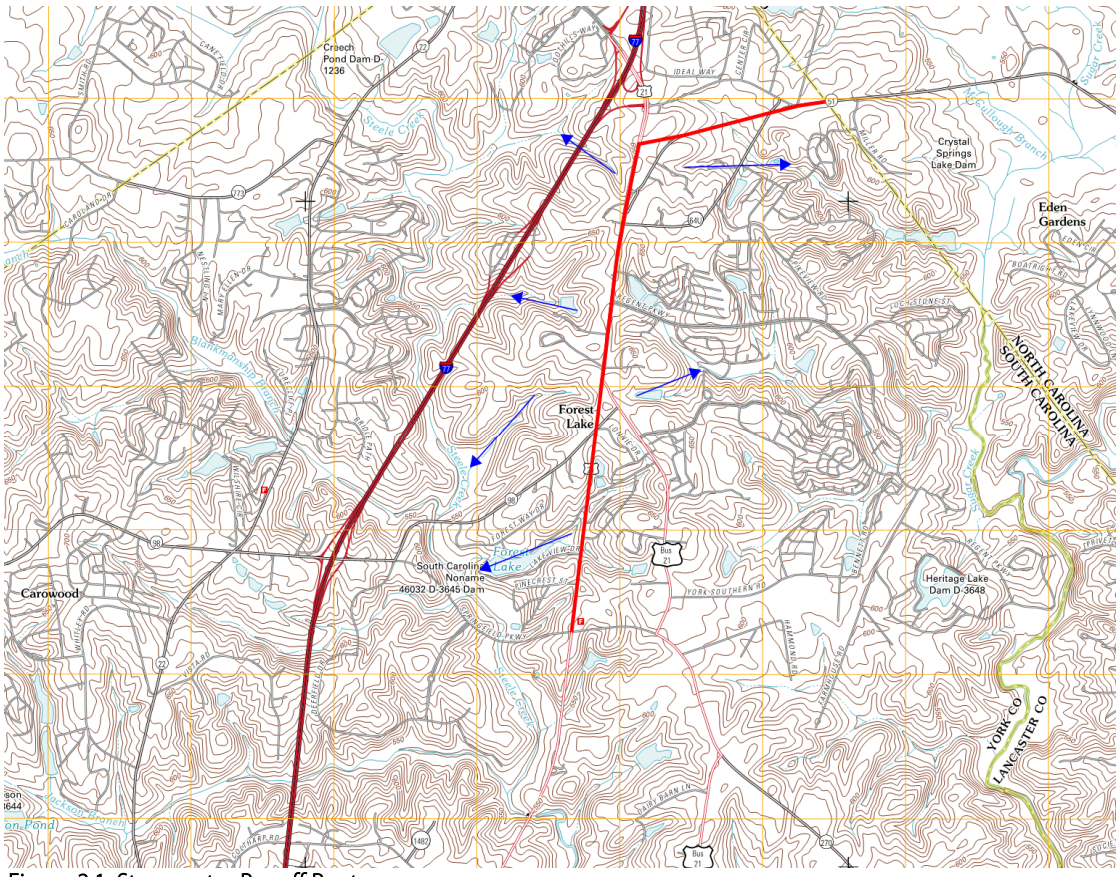

Figure 2.1: Stormwater Runoff Route

2.3 Impairments and TMDLs

Some Waters of the State (WoS) have been identified as not meeting the State's water quality standards for recreational swimming, fish consumption aquatic life use, and/or shellfish harvesting for one or more pollutants even after controls for point and nonpoint source pollution have been put in place. These waterbodies have been classified as "impaired." Once these waterbodies have been identified they are listed on the State's 303(d) List of Impaired Waterbodies. South Carolina lists impairments as "stations" where samples were taken along a waterbody.

The most recently-approved 303(d) list can be found at the following webpage:

https://scdhec.gov/bow/south-carolina-303d-list-impaired-waters-tmdls

After a pre-determined period of time, SCDHEC is obliged to develop a Total Maximum Daily Load (TMDL) for the pollutant of concern for each impaired station listed on the

303(d) List. A TMDL is the amount of a single pollutant (such as bacteria, nutrients, or metals) that can enter a waterbody on a daily basis and that waterbody still meet water quality standards. "TMDL" refers to both a calculation of a pollutant entering a waterbody as well as the document containing this calculation along with source assessments, watershed, and land use information, reductions and allocations information, implementation and other relevant information, maps, figures, and pictures.

Once a TMDL has been developed and approved by the EPA, the impaired WoS is removed from the 303(d) list. A separate list is maintained for WoS with approved TMDLs.

Any construction site whose discharges are released in a WoS listed on the 303(d) List or for which an EPA-approved TMDL has been developed must address the specific pollutant set forth in the TMDL and/or potential pollutants for the impairment. The SWPPP must include a description of BMPs to address these pollutants.

The primary permittee and/or contractor must ensure that the construction site discharges remain in compliance with the State's water quality standards. To do so, these parties will have to ensure the function of all approved BMPs to handle the specific pollutant.

Construction Stormwater Discharges are expected to contain pollutants that contribute and/or can caused the following impairments to receiving water bodies: BIO (Macroinvertebrate Community), Turbidity, TP (Total Phosphorus), TN (Total Nitrogen), CHLA (Chlorophyll-a), and Fecal Coliform in waters classified for Shellfish Harvesting in the coastal zone. The presence of any of these impairments in receiving waters will require approval control of the site's construction stormwater discharges. Information on each of these impairments and how to treat stormwater runoff for these impairments has been provided below.

Impairments Effected by Construction Site Discharges and Methods to Control Potential Pollutants Causing or Contributing to the Impairments

1. BIO (Macroinvertebrate Community): A balanced and varied group of Macroinvertebrate organisms is an indicator of a healthy stream that supports aquatic life. A balanced community can be defined as a natural, diverse group of organisms (including Macroinvertebrate) characterized by the ability to sustain itself through season changes, presence of food chain species and a lack of domination by pollutant tolerant or invasive species. If these conditions do not exist, then the site may be considered impaired due to the presence of an undesirable or non-existent Macroinvertebrate community. Sediment from construction sites may further threaten the propagation of these organisms.

   Address by: Examples include limiting the amount of disturbed area, designing sediment control BMPs to remove the maximum amount of sediment possible, immediate stabilization of disturbed areas, and other practices may be utilized to control the discharge of sediment from construction sites.

2. Turbidity: Turbidity can be generally defined as the "cloudiness" of a waterbody and may be caused by the growth of aquatic phytoplankton and the presence of

suspended solids in the water column. In SC, a water quality standard for turbidity is applicable to all waters of the State (see R. 61-68 D. 11. for numeric targets by waterbody classification). Turbidity levels that exceed the water quality standard may reduce light penetration, thereby inhibiting aquatic flora growth, **and may reduce the ability of fauna, such as fish, to absorb oxygen across their gills.**

Address by: Examples include limiting the amount of disturbed area, designing sediment control BMPs to remove the maximum amount of sediment possible, immediate stabilization of disturbed areas, and other practices may be utilized to control the discharge of sediment from construction sites.

3. TP (Total Phosphorus): Similar to total nitrogen, TP is an essential nutrient for the propagation of aquatic life. In SC, a water quality standard for TP is applicable to lakes greater than 40 acres (see R. 61-68 D. 11. for numeric and narrative targets). At acceptable levels, TP is assimilated by aquatic flora ensures the propagation of an overall balanced, indigenous aquatic community. TP levels that exceed the water quality standard are considered impaired and may cause negative impacts to the overall health of the aquatic community by promoting excessive algal growth in lakes. Phosphorous may enter a site's stormwater when excess amounts of the nutrient are applied to the site during temporary or final stabilization.

   Address by: To prevent this soil should be tested to determine the quantity of the nutrient present in the soil and the correct amount that needs to be added so that it is absorbed by the vegetation.

   TN (Total Nitrogen): Similar to total phosphorus, TN is an essential nutrient for the propagation of aquatic life. In SC, a water quality standard for TN is applicable to lakes greater than 40 acres (see R. 61-68 D. 11. for numeric and narrative targets). At acceptable levels, TN is assimilated by aquatic flora and ensures the propagation of an overall balanced, indigenous aquatic community. TN levels that exceed the water quality standard are considered impaired and may cause negative impacts to the overall health of the aquatic community by promoting excessive algal growth in lakes. Nitrogen may enter a site's stormwater when excess amounts of the nutrient are applied to the site during temporary or final stabilization

   Address by: Examples include that the soil should be tested to determine the quantity of the nutrient present in the soil and the correct amount that needs to be added so that it is absorbed by the vegetation.

4. Chlorophyll-a (CHLA): CHLA is a pigment present in the cells of photosynthetic flora and some algal species. The presence of CHLA in an aquatic environment is a water quality indicator of the overall productivity in the aquatic system. CHLA is linked to the levels of TP, TN and light penetration in the water column. In SC, a water quality standard for CHLA is applicable to lakes greater than 40 acres (see R. 61-68 D. 11. for numeric and narrative targets). CHLA levels that exceed the water quality standard may suggest that other undesirable water quality impacts are present as the aquatic system may be too productive to support the propagation of an overall balanced, indigenous aquatic community. Excess nutrients may discharge from a construction site during temporary and final stabilization. Limiting the amount of phosphorus and

nitrogen applied while **establishing vegetation will prevent excessive levels of CHLA in receiving waters.**

Address by: Examples include that the soil should be tested to determine the quantity of the nutrients present in the soil and the correct amount that needs to be added so that it is absorbed by the vegetation.

5. Fecal Coliform (FC) in Shellfish Harvesting waters: Fecal Coliform is an indicator bacteria for other pathogens which may be present in a waterbody. Shellfish Harvesting Waters are tidal salt-waters protected for shellfish harvesting and must be protected to a higher standard than other waters because of the risk to human health posed by ingesting shellfish from areas with high levels of bacteria. Bacteria levels increase following rain events. Potential sources of bacteria on construction sites include improperly located porta-johns and litter that may attract rodents and other animals.

   Address by: Porta-johns should be placed away from WoS and not placed on catch basins and other drainage structures. Litter and construction debris should be placed in identified areas and emptied on a routine basis.

Impairment Sources and Prevention

Construction sites can contribute to these impairments directly through the release of excess soil and/or nutrients within stormwater runoff. For this reason, proper sediment and erosion control BMPs should be implemented and the design of the stormwater management systems, during both construction and post-construction, should address the control of stormwater runoff. A reduction in the volume released or the rate at which this volume is released can significantly improve the quality of stormwater runoff and limit the amount of the pollutants that contribute to the above listed impairments.

As an example, sediment basins and/or traps should be used during construction to allow for sedimentation of soils/nutrients, and to control the release of stormwater into the impaired water body. Vegetated Detention and Infiltration structures should be implemented as post-construction BMPs to control stormwater volumes. Caution is advised when using fertilizers to reach Final Stabilization; excess fertilizer can contribute to each of the above listed impairments.

Site-Specific Requirements

This construction site's discharges drain into Sugar Creek, which currently has only a BIO impairment designation. Due to the possibility of pollutants in construction stormwater discharges from this site creating an impairment, the following must be conducted throughout the lifespan of all land-disturbing activities at this site:

- Bi-weekly inspections of all the primary sediment control BMPs;
- Employee training/acknowledgement during the Pre-Construction Meeting;
- Installation of additional BMPs to meet the water quality standards (as directed by the SWPPP preparer and as approved by the regulating agency); and

- All sediment control BMPs have been designed to meet or exceed an 80% trapping efficiency.

2.4 Critical Areas

There are no Critical Areas located within or directly adjacent to the disturbed areas.

Section 3

Compliance Requirements

3.1 SWPPP Availability

Section 3.1.6 of the CGP requires that a copy of the On-Site SWPPP (OS-SWPPP), as defined by Section 3.1.1.H of the CGP, must be retained at the locations where the OS-SWPPP can be easily accessed during normal business hours from the date of commencement to the date that final stabilization is reached. Due to the nature of this project, the OS-SWPPP will be retained at the construction site. The OS-SWPPP must be made available upon request and at the time of a construction site inspection by the EPA, SCDHEC, local government officials, and the Operator of the Municipal Separate Storm Sewer System (MS4).

3.2 Pre-Construction Conferences

A pre-construction conference must be held for this construction project and its approved On-Site Stormwater Pollution Prevention Plan (OS-SWPPP). Each contractor, subcontractor, utility provider, etc., who will work at a site must attend this conference in person. The primary purpose of this conference is for:

- The preparer of the SWPPP or someone with a registration equivalent to that of the preparer of the SWPPP; and/or
- The person with operational control of the plans and specifications (the Primary or Secondary Permittee) or their duly authorized representative (as defined in Section 122.22(b) of SC Regulation 61-9) to review and explain the On-Site SWPPP (OS-SWPPP) so that all are aware of the requirements before they start performing construction-related (land disturbing) activities that may affect the implementation of the approved OS-SWPPP. This conference may be held simultaneously with all contractors and builders present or may be conducted separately with one or more contractors, subcontractors, etc. present.

The conference must be held on-site and must specifically address Section 3.1.7 of the CGP detailing how each type of modification, Major and Minor, will be addressed and processed at the construction site to maintain compliance. The persons conducting the conference must document each contractor, subcontractor, utility provider, etc. attending the conference, and include the date, time, location, and identification of the attendees. These records must be maintained with the OS-SWPPP.

3.3 Inspection Requirements

Section 4.2 of the CGP requires that inspections be conducted on a routine basis of all areas disturbed by construction activity. These areas include perimeter BMPs and material storage areas exposed to precipitation. The purpose of the inspections is to look for evidence of, or potential for, inefficiencies within the On-Site SWPPP (OS-SWPPP), whether they are a direct result of improper design, installation, or maintenance. At a minimum, the inspections shall include the following:

- All areas of the site disturbed by construction activity and areas used for storage of materials that are exposed to precipitation.
- All stormwater conveyance systems for any evidence of, or the potential for, pollutants entering these systems.
- All BMPs identified in the OS-SWPPP.
- All discharge locations to ascertain whether the implemented BMPs are effective in preventing the discharge of sediment from the site. Where discharge locations are inaccessible, nearby downstream locations must be inspected to the extent that such inspections are practicable.
- Locations where vehicles enter or exit the site must be inspected for evidence of the off-site sediment tracking.

The Permittee shall provide qualified personnel and be responsible for inspections of the construction activity and performance of BMPs.

Frequency

The frequency of the inspections shall be at least bi-weekly after the date of commencement until the date that final stabilization is reached. The frequency may be increased based on the frequency of storm events of 0.5 inches or greater and under the direction of SCDHEC. The frequency of inspections may be reduced to at least once every month for areas that have reached and maintain temporary or final stabilization with no additional disturbance. If a definable area reaches final stabilization, this may be marked on the inspection reports of the OS-SWPPP, and no further inspections of the area will be required

Rainfall Data

Rainfall data for the days of inspection and rainfall events of 0.5 inches or greater must be maintained in the OS-SWPPP. The Permittee may maintain an on-site rain gauge or use data from a certified weather record within a reasonable proximity of the construction site to record the rainfall amounts.

Inspector Qualifications

"Qualified personnel" means a person knowledgeable in the principles and practice of erosion and sediment control who possesses the skills to assess conditions at the construction site that could impact Stormwater quality and to assess the effectiveness of any BMPs selected to control the quality of stormwater discharges from the construction site, This person must be either the preparer of the approved C-SWPPP or an individual who is under the direct supervision of the preparer or the approved C-SWPPP and who meets the requirements of qualified personnel as described below or an individual who has been certified through a Constructions Site Inspector Certification Course that has been approved by SCDHEC. Inspections may also be conducted by a person with a registration equivalent to the registration of the preparer of the C-SWPPP and who meets the qualifications listed below or an individual who is under the direct supervision of the person with an equivalent registration and who meets the requirements listed below.

Inspection Reports

For each inspection required above, the Permittee, or designated personnel, must complete an inspection report. At a minimum, the inspection report must include:

- The inspection data.
- Names, titles, and if not previously given in an inspection report, the qualifications of personnel making the inspection, unless those qualifications change.
- Weather information for the period since the last inspection (or since commencement of construction activity if the first inspection) including a best estimate of the beginning of each storm event, duration of each storm event, approximate amount of rainfall for each storm event (in inches), and whether any additional discharges have occurred. At the very least, the total rainfall (in inches) since the time of the last inspection must be recorded.
- Weather information and a description of any discharges occurring at the time of the inspection.
- Location(s) of discharges of sediment of other pollutants form the site.
- Location(s) of BMPs that need maintenance.
- Location(s) of BMPs that failed to operate as designed or proved inadequate for a particular location.
- Location(s) where additional BMPs are needed that did not exist at the time of inspection.
- Corrective action required including any changes to the OS-SWPPP necessary and implementation dates.
- Site Name, Operator Name and permit number.
- Verification that all BMPs and stormwater controls identified in the OS-SWPPP have been installed and are operating as designed.

A record of each inspection and of any actions taken in accordance with the Permit must be retained as part of the OS-SWPPP for at least three years from the date that permit coverage expires or is terminated and must be signed by the qualified inspector(s).

3.4 Maintenance Requirements

Construction Maintenance

While conducting construction activities, the BMPs and other protective measures identified on the plans and in the OS-SWPPP must remain in effective operating condition. If inspections find BMP's that are not operating effectively, maintenance must be performed before the next scheduled inspection or as soon as reasonably possible before the next storm event, whenever practicable.

If inspections reveal that a BMP has been used inappropriately or incorrectly, the Permittee must address the necessary replacement or modification required to correct the issue within 48 hours of identification of the issue. If existing BMPs need to modified or additional BMPs are necessary to comply with the requirements of the General Construction Permit, the implementation must be before the next storm even whenever

practicable. If implementation before the next storm event is impracticable, the situation bust be documented in the inspection report in the OS-SWPPP, and alternatives implemented as soon as reasonable possible.

Sediment collected by Silt Fence and other sediment control measures must be removed once the deposited sediment reaches 1/3 the height of the above ground portion of the BMP or lower height as specified by the manufacturer.

Permanent Maintenance

After construction activities have been terminated, the Permittee shall be responsible for maintaining the stormwater management items located within the site. The maintenance of these items shall include the following:

- Moving grass
- Removal of trash and sediment within the ditches
- Cleaning and unclogging pipes
- Inspecting for and addressing erosion of side slopes, if present

The frequency of completing the maintenance activities will be based on an as-needed basis.

3.5 Record Keeping

In addition to and in accordance with Section 3.1.1.H.V. of the CGP, the OS-SWPPP must contain appendices with the following documents:

- SCDHEC Construction General Permit. Provisions may be made for the copy of general permit to be accessed electronically as long as a hard copy can be made available by the end of the working day when required.
- Stamped and Approved Notice of Intent
- NPDES Coverage Approval
- CZC Certification
- North Charleston Municipal Separate Storm Sewer System (MS4) Approval
- Any and all logs as deemed necessary to comply with the Permit which includes, but is not limited to, preconstruction attendance, inspections reports, and rainfall data.

3.6 Final Stabilization

As the final grades for the site are established, the site will be transitioned to final stabilization. The Project Area will be stabilized by permanent seeding. Once temporary BMPs have been removed or converted to post construction BMP's and final stabilization has been reached on all disturbed areas, the Notice of Termination shall be submitted.

Appendix A

Completed NOI Form and Checklist

NOTICE OF INTENT (NOI)
For Coverage(s) of Primary Permittees Under South Carolina NPDES General Permit For Stormwater Discharges From Construction Activities SCR100000
(Maintain As Part of On-Site SWPPP)

For Official Use Only
File Number: _____
Permit Number: SCR10_____
Submittal Package Complete: _____

Submission of this Notice of Intent constitutes notice that the Applicant identified in Section II intends to be authorized as a Primary Permittee in the state of South Carolina under NPDES General Permit SCR1000000. ***Fees required for review and NPDES coverage of each application type are as listed on page 2 of the Instructions.***

Date: 01/24/2023
Project/Site Name: US 21 North Phase 1 and SC51 Widening **County:** York
(Modification or Change of Information Only) **Prior Approved NPDES Permit or File Number:** _____

Do you want this project to be considered for the Expedited Review Program (ERP)? ☐ **Yes or** ☑ **No (See instructions)**

I. Notice of Intent (NOI) Application Type(s)

A. **Project (Application/Review) Type(s)** (Select **ALL** that apply):
- ☑ New Project (Initial Notification) Ongoing Project: ☐ Permitted or ☐ Un-Permitted
- ☐ Late Notification ☐ Low Impact Development (LID) or Project Design Above Regulatory Requirements
- ☐ New Owner/Operator or Company Name Change **(see instructions, attach Form A (Transfer of Ownership))**
- ☐ Major Modification: **(see instructions, attach Form B (Major Modifications))**
- ☐ MS4 Project Review
- ☐ Ocean and Coastal Resource Management (OCRM) Review
- ☐ Change of Information/Other (Specify): _____

B. If Applicable, identify the entity designated as **MS4 Reviewer and MS4 Operator** (i.e., Lexington County, City of Greer, etc.): **MS4 Reviewer**_____ **MS4 Operator** _____

II. Primary Permittee Information ☐ Change of Information

☐ Person or ☑ Company	If a Company, are you a ☐ Lending Institution or ☑ Government Entity? Company EIN **(If applicable):** EIN: _____

A. **Primary Permittee Name:** York County
Mailing Address: P.O. Box 148 City: York State: SC Zip: 29745
Phone: 803 818 5733 Fax: _____ Email Address: engineering@yorkcountygov.com

B. **Contact /ODSA Name** (If different from above OR if owner is a company): Lisa W. Hagood, PE
Mailing Address: P.O. Box 148 City: York State: SC Zip: 29745
Phone: 803 684 8571 Fax: 803 684 8596 Email Address: penniesforprogress@yorkcountygov.com

C. **Property Owner Name** (If different from above): South Carolina Department of Transportation
Mailing Address: 338 Robertson Road West City: Rock Hill State: SC Zip: 29730
Phone: 803 324 3545 Fax: _____ Email Address: JohnstonCJ@scdot.org

III. Comprehensive Stormwater Pollution Prevention Plan (C-SWPPP) Preparer Information ☐ Change of Information

A, **C-SWPPP Preparer Name:** Guy P. Peters, PE, CFM
B. **Registered Professional** ☑ Engineer ☐ Landscape Architect ☐ Tier B Land Surveyor **S. C. Registration #:** 21220
C. **Company/Firm Name:** STV Incorporated **S. C. COA # :** C03318
Mailing Address: 454 S. Anderson Rd Ste 3 BTC 517 City: Rock Hill State: SC Zip: 29730
Phone: 803 656 2014 Fax: 803 980 4099 Email Address: guy.peters@stvinc.com

IV. Project/Site Information ☐ Change of Information

A. **Type of Construction Activity(ies)** (Select **ALL** that apply):
- ☐ Commercial ☐ Industrial ☐ Institutional ☐ Mass Grading ☑ Linear ☐ Utility/Infrastructure
- ☐ Residential: Single-family ☐ Residential: Multi-family ☐ Multi-use (Commercial & Residential)
- ☐ Site Preparation (No New Impervious Area) ☐ Other (Specify) _____

B. **Site Address/Location** (street address, nearest intersection, etc.) SC51 fr NC border to intx US21; US21 fr intx US21 to SC460
City/Town (If in limits): _____ Zip Code: _____
Latitude: 35 ° 05 ' 02 " N Longitude: - 80 ° 56 ' 00 " W (Source): ☐ GPS ☑ Web Site: Google Earth Pro
Tax Map Number (s) (List all): SCDOT right of way

C. Is this site located on **Indian Land**? ☐ Yes ☑ No

D. **Proposed Start Date**: 10/01/2022 **Proposed Completion Date**: 03/31/2024

E. **Disturbed Area** (nearest tenth of an acre): 52.6 **Total Area** (acres): 55.6

F. **Modification Only:**(nearest tenth of an acre)**: Disturbed Area: Current (Approved) Area:** _____
Disturbed Area Change (Increase Only): _____ **Total Disturbed Area (After Change):** _____

G. Is this project part of a **Larger Common Plan for Development or Sale (LCP)**? ☐ Yes ☑ No
LCP/ Overall Development Name: _____ Check here if this is the **First Phase**. ☐

Previous State Permit/File Number: _____ **Previous NPDES Coverage Number**: SCR10 _____

H. Any **Flooding Problems** exist downstream of or adjacent to this site? ☐ Yes ☑ No (If yes, provide detailed description of flooding problems and applicable floodway/flood zone information in the C-SWPPP).

I. Active **S.C. DHEC Warning Notice**, **Notice to Comply or Notice of Violation** for this site or LCP? ☐ Yes ☑ No

J. List Relevant **State and Federal Environmental Permits or Approvals** applied for or obtained for this site (e.g., **RCRA, USACOE, Nationwide**, etc.). **If None, list None**.
SAC-2015-00812

K. **Any Waiver(s)/Variances/Exceptions Requested for this Project**? (If yes, identify below and include **Waiver Request and Justifications** in the C-SWPPP for each proposed request).

1. Small Construction Activity Waiver(s) From NPDES permitting **(Section 1.4 & Appendix B)**? ☐ Yes ☑ No
If yes, Identify requested waiver: ☐ Rainfall Erosivity Waiver ☐ TMDL Waiver ☐ Equivalent Analysis Waiver

2. Detention Waiver **(72-302(B)**? ☑ Yes ☐ No | 3. Other (Specify): _____

V. Waterbody Information (Attach additional sheet(s) as needed) ☐ Change of Information

A. **Receiving Waterbody(s) (RWB) Information** (List the nearest and next nearest receiving waterbodies to which the sites stormwater discharges will drain. If stormwater discharges drain to multiple waterbodies, list all such waterbodies).

1. Name of Receiving Waterbodies (RWB)	2. Distance to RWB (feet)	3. Classification of RWB
a. Nearest: UT Steele Creek	380	FW
b. Next Nearest: Steele Creek	700	FW
c. Coastal Zone ONLY: Coastal Receiving Water (CRW): _____		Not Applicable
d. Other Waterbodies: _____		

B. **Waters of the U.S. / State Information** (Attach additional sheet(s) as needed)

Waters of the U.S./ State	1. On the site?	2. Delineated/ Identified?	3. Impacts?	4. Amount of impacts
a. Jurisdictional wetlands	☑ Yes ☐ No	☑ Yes ☐ No	☑ Yes ☐ No	0.09 Ac
b. Non-jurisdictional wetlands	☑ Yes ☐ No	☑ Yes ☐ No	☐ Yes ☐ No	____ Ac
c. Other Water(s): jurisdictional streams	☑ Yes ☐ No	☑ Yes ☐ No	☑ Yes ☐ No	____ Ac 635 Feet
d. Coastal Zone ONLY: Direct Critical Area	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	____ Ac ____ Feet

5. If yes for impacts in B.3, describe each impact and activity, and list all permits (e.g., USACOE Nationwide Permit, DHEC General Permit) and certifications that have been applied for or obtained for each impact:
Storm drain pipe extensions in jurisdictional streams authorized by USACOE NWP SAC-2015-00812 attached

C. **S.C. Navigable Waters (SCNW) Information (Section 2.6.5)** The Department will address any issues related to State Navigable Waters' Program under SC Regulation 19-450 during the review of the C-SWPPP for activities that will **NOT** require a 404 permit or a 401 certification. (Attach additional sheet(s) as needed).

1. Are S. C. Navigable Waters (SCNW) on the site: ☐ Yes ☑ No
a. If **no**, do not complete this question. Proceed to Section D (Impaired Waterbodies).
b. If **yes**, provide the name of S.C. Navigable Waters (SCNW) on the site: _____

2. If **yes for C.1**, will construction activities cross over or occur in, under, or thru the SCNW? ☐ Yes ☐ No
If yes, describe SCNW activities (e.g., road crossing, sub-aqueous utility line, temporary or permanent structures, etc.) and proceed to Section C.3: _____

3. Identify permits providing coverage of SCNW activities proposed for your site. If NONE, list none.

Permits/Certifications	Permit or Certification No.	Corresponding Covered SCNW Activity(ies)
a. DHEC General/ Other DHEC Permit		
b. USACOE **404 Permit or 401 Certification**		
c. SCNW Permit If applied for or issued, identify **Date applied for or issued:** _____		☐ **All Activities** or ☐ **Some Activities (Describe):**

d. If a SCNW Permit has NOT been applied for provide an additional plan sheet that shows plan and profile views (drawn to scale) of the SCNW and associated activities. Include a description of all proposed activities on this plan.

D. **Impaired Waterbodies Information** (Attach additional sheet(s) as needed)

1. 303(d) Listed Impaired Waterbodies

a. Name of **Nearest DHEC Water Quality Monitoring Stations (WQMS)(s)** that receives stormwater from your construction site and/or thru an MS4 and the **Name of the Corresponding Waterbody?**		b. **Is this WQMS(s) listed on the most current 303(d) List? If No, proceed to Section 2 of this table. If Yes, complete items c thru f.**	c. List the pollutant(s) identified as **"CAUSES"** of the impairment	d. Will any pollutants causing the impairment be present in your site's construction stormwater discharges?	e. If **yes for d**, list the **"USE SUPPORT"** impairment(s) affected by the pollutant(s) identified in c.
Nearest DHEC WQMS(s)	**Corresponding Waterbody**				
CW-681	Steele Creek	☐ Yes ☑ No		☐ Yes ☑ No	
		☐ Yes ☑ No		☐ Yes ☑ No	
		☐ Yes ☐ No		☐ Yes ☐ No	

f. If **yes for d** above, **will use of the BMPs proposed for your project ensure the site's discharges will NOT contribute to or cause further WQS violations for the impairment(s) listed in c?** ☐ Yes ☐ No
(NOTE: If no for f, this site is NOT eligible for coverage under the CGP). See Instructions.

2. TMDL Impaired Waterbodies

a. Name of **Nearest DHEC Water Quality Monitoring Stations (WQMS)(s)** that receives stormwater from your construction site and/or thru an MS4?	b. Has a TMDL(s) been developed for this WQMS(s)? **If No, identify as such below and proceed to Section VI. If Yes, complete items c thru f of this table.**	c. If **yes for b**, what pollutants are listed as "CAUSES" or causing the impairment?	d. If **yes for b**, has the standard been **"ATTAINED" or " Fully Supported"** for the impairment(s)?	e. If **no for d (Not Attained)**, will any pollutants causing the impairment be present in your site's construction stormwater discharges?
CW-203	☐ Yes ☑ No	fecal coliform	☐ Yes ☐ No	☐ Yes ☐ No
	☐ Yes ☑ No		☐ Yes ☐ No	☐ Yes ☐ No
	☐ Yes ☐ No		☐ Yes ☐ No	☐ Yes ☐ No

f. If **yes for e** above, **are your discharges consistent with the assumptions and requirements of the TMDL(s)?** ☐ Yes ☐ No
(NOTE: If no for f, this site is NOT eligible for coverage under the CGP). See Instructions.

VI. Signatures and Certifications

DO **NOT** SIGN IN BLACK INK**!** **Read the Certifications below (in entirety). Provide date, printed name, and signatures below**. If you are a **New Owner/Operator**, as Primary Permittee you must also sign and date the applicable Comprehensive SWPPP Acceptance & Compliance Agreement below.

C-SWPPP PREPARER: "One copy of the C-SWPPP, all specifications and supporting calculations, forms, and reports are herewith submitted and made a part of this application. I have placed my signature and seal on the design documents submitted signifying that I accept responsibility for the design of the system. Further, I certify to the best of my knowledge and belief that the design is consistent with the requirements of Title 48, Chapter 14 of the Code of Laws of SC, 1976 as amended, pursuant to Regulation 72-300 et seq. (if applicable), and in accordance with the terms and conditions of SCR100000." **(This should be the person identified in Section III).**

Guy P. Peters, PE, CFM		21220
Printed Name of C-SWPPP Preparer	**Signature of C-SWPPP Preparer**	**S. C. Registration #**

PRIMARY PERMITTEE: "I or I (on behalf of my company and its contractors and agents), as the case may be, certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I understand that DHEC enforcement actions may be taken if the terms and conditions of the C-SWPPP are not met and I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

"I or I (on behalf of my company and its contractors and agents), as the case may be, also hereby certify that all land-disturbing construction and associated activity pertaining to this site shall be accomplished pursuant to and in keeping with the terms and conditions of the approved plans and SCR100000. I also certify that a responsible person will be assigned to the project for day-to-day control. I hereby grant authorization to the to S. C. Department of Health and Environmental Control (DHEC) and/or the local implementing agency the right of access to the site at all times for the purpose of on site inspections during the course of construction and to perform maintenance inspections following the completion of the land-disturbing activity." **(See Section 122.22 of S.C. Reg. 61-9 for signatory authority information.)** Having understood the above information, I am signing this certification as Primary Permittee to the aforementioned NPDES general permit."

Lisa W. Hagood, PE	County Engineer
Printed Name of Primary Permittee	**Title/Position**
Signature of Primary Permittee	**Date Signed**

NPDES CGP FEE SCHEDULE A

(All Counties EXCEPT Beaufort, Berkeley, Charleston, Colleton, Dorchester, Georgetown, Horry, and Jasper)

The schedule should be attached to DHEC Form 2617. Do not send payment in window envelope. **DO NOT MAIL CASH**. DHEC will notify the Project Owner/ Operator if the submitted check or credit card payment cannot be processed. **The review clock will start when acceptable payment is received.**

1. Identify (√) the Project Review Type(s) **Enter NPDES Coverage Fee of $125 in the right-hand column if any of the following project/review types apply to this application.** Proceed to Item 2.	**(√)**	**NPDES Coverage Fee**
a. Project or LCP (Item IV.G) that will ultimately disturb one (1) acre or more Note: If your project will ultimately disturb less than one (1) acre **AND** is NOT a part of a Larger Common Plan, coverage under SCR100000 is not required; see http://www.scdhec.gov/administration/library/d-2628.pdf (Notification Form for Sites Disturbing Less Than 1-Acre Not Part of a Larger Common Plan, Non-Coastal County"	☑	$ _____. 00
b. New Owner/Operator (Transfer of Ownership)/Company Name Change ($125 NPDES Coverage fee is required by the Department for Transfers of Ownership and Company Name Changes)	☐	
c. Unpermitted Ongoing Project or Late Notification	☐	
d. MS4 Project Review (Item I.A and I.B) ($125 payable to Department thru MS4 Reviewer)	☐	
e. Other (Specify): Linear project - PfP Program roadway improvements	☑	

2. Determine the Project Review Fees (Review fees cannot exceed $2000 for a project)		
PROJECT OR LCP THAT WILL ULTIMATELY DISTRUB ONE (1) ACRE OR MORE	**(√)**	**Review Fees**
a. Enter the disturbed area (Item IV.E) for this project. Proceed to Items 2.b and 2.c.	52.6 (Nearest tenth of an acre)	
b. Will this project or LCP (Item IV.G) ultimately disturb more than 1.0 acres	☑ Yes ☐ No	
c. Is this project exempt from S. C. Reg. 72-300 et seq.?	☐ Yes ☑ No	
1. If this project will **not** ultimately disturb more than 1.0 acre, and is not part of an LCP, **your project is automatically covered under this permit and the NPDES coverage fee and review fee are not required.** See the **BOW-SPWS** for "Less Than 1-Acre of Land Disturbance – Non-Coastal Counties". 2. If this project will ultimately disturb more than 1.0 acre, proceed to Item 2.d.		
d. Enter the project review fees (based on $100/disturbed area) in the right-hand column. (Multiply the disturbed area (Item 2.a) by $100/disturbed area). If the disturbed area for this project (Item 2.a.) totals 20.0 acres or more, enter $2000 in the right-hand column. Review fees cannot exceed $2000 for a project.		$ 2000. 00

3. Total Required Fees **Add the values in the right-hand columns of Items 1 and 2.d.** Proceed to Item 4. **(The Department will not review this project until all required fees are received).**	$ 2000. 000

4. Identify the Method of Payment:

☐ **Payment by Check:**

Attach a **signed and dated check payable to S.C. DHEC** to the **front** of this Fee Schedule.
Please note that all checks must be **less than 30 days old** and must be for the **entire required fees**.

☑ **Payment by Credit Card**: **(Check here if you wish to pay via credit card using the on-line payment system).**

The Department will contact you to provide instructions and the invoice number necessary for online payment.
Please provide an e-mail address where the invoice number may be sent: penniesforprogress@yorkcountygov.com

For official use only: **Invoice Number** _____

Additional Permits, Approvals, & Certifications

Joint Federal and State Application Form
For Activities Affecting Waters of the United States
Or Critical Areas of the State of South Carolina

This Space for Official Use Only
Application No. _____
Date Received _____
Project Manager _____
Watershed # _____

Authorities: 33 USC 401, 33 USC 403, 33 USC 407, 33 USC 408, 33 USC 1341, 33 USC 1344, 33 USC 1413 and Section 48-39-10 et. Seq of the South Carolina Code of Laws. These laws require permits for activities in, or affecting, navigable waters of the United States, the discharge of dredged or fill material into waters of the United States, and the transportation of dredged material for the purpose of dumping it into ocean waters. The Corps of Engineers and the State of South Carolina have established a joint application process for activities requiring both Federal and State review or approval. Under this joint process, you may use this form, together with the required drawings and supporting information, to apply for both the Federal and/or State permit(s).

Drawings and Supplemental Information Requirements: In addition to the information on this form, you must submit a set of drawings and, in some cases, additional information. A completed application form together with all required drawings and supplemental information is required before an application can be considered complete. See the attached instruction sheets for details regarding these requirements. You may attach additional sheets if necessary to provide complete information.

1. Applicant Last Name: Galloway	11. Agent Last Name (agent is not required): Kotheimer
2. Applicant First Name: Jackie	12. Agent First Name: Joshua
3. Applicant Company Name: SCDOT	13. Agent Company Name: STV Incorporated
4. Applicant Mailing Address: P.O. Box 191	14. Agent Mailing Address: 900 West Trade Street, Suite 715
5. Applicant City: Columbia	15. Agent City: Charlotte
6. Applicant State: South Carloina / 7. Applicant Zip: 29202-0191	16. Agent State: North Carolina / 17. Agent Zip: 28202-1444

43. Authorization of Agent. I hereby authorize the agent whose name is given on page one of this application to act in my behalf in the processing of this application and to furnish supplemental information in support of this application. [1]

Jacki Gillaspy — Applicant's Signature — 2/17/2022 — Date

44. Certification. Application is hereby made for a permit or permits to authorize the work and uses of the work as described in this application. I certify that the information in this application is complete and accurate. I further certify that I possess the authority to undertake the work described herein or am acting as the duly authorized agent for the applicant. [1]

Jacki Gillaspy — Applicant's Signature — 2/17/2022 — Date

Agent's Signature — Date

[1] **The application must be signed by the person who desires to undertake the proposed activity or it may be signed by a duly authorized agent if the authorization statement in blocks 11 and 43 have been completed and signed. 18 U.S.C. Section 1001 provides that: Whoever, in any manner within the jurisdiction of any department of the United States knowingly and willfully falsifies, conceals, or covers up any trick, scheme, or disguises a material fact or makes any false, fictitious or fraudulent statements or representations or makes or uses any false writing or document knowing same to contain any false, fictitious or fraudulent statements or entry, shall be fined not more than $10,000 or imprisoned not more than five years or both.**

Supplemental Information

32. Description of the Overall Project and of Each Activity in or Affecting U.S. Waters or State Critical Areas

Project Description

The South Carolina Department of Transportation (SCDOT), in cooperation with York County, proposes to widen approximately 5.4 miles of US 21 and approximately one mile of SC 51 (Pineville-Rock Hill Road) located within the Town of Fort Mill. US 21 would be widened from two to four lanes, with a center turn lane/median, from its intersection with White St (SC 160) north to its intersection with Springhill Farm Road (S-48). SC 51 would be widened from two to four lanes, with a center turn lane/median, from its intersection with US 21 east to the North Carolina state line. The proposed project also includes improvements to existing intersections along US 21. The project would require modifications to the existing stormwater drainage infrastructure and would require the relocation of existing utilities including sanitary sewer, water, power, and telecommunications located within the project construction limits. There were no additional impacts associated with utilities as part of this project. One water line will be located within the limits of a proposed permanent riprap armoring impact to Tributary C and will not require additional impacts to be installed.

The project is included in the Rock Hill-Fort Mill Area Transportation Study (RFATS) 2035 Long Range Transportation Plan and is being funded by the RFATS FY 2017-2022 Transportation Improvement Program (TIP) and York County 'Pennies for Progress 3' Program (PFP3 Project #11149-004) and 'Pennies for Progress 4' (PFP4 Project #17228-015); therefore, the preparation of a National Environmental Policy Act (NEPA) environmental document and review by the Federal Highway Administration (FHWA) is not necessary.

Existing Facility

The existing US 21 roadway facility within the southern portion of the PSA consists of two 11-foot wide travel lanes. Within the northern portion of the PSA, the existing US 21 roadway transitions from two to four lanes varying in width from 11 to 12 feet.

Stormwater drainage from the existing roadways is stored and/or conveyed through a combination of roadside ditches, pipes/culverts, curb and gutter, and detention ponds. One bridge within the PSA will be replaced. No impacts are anticipated for the replacement of the bridge.

Proposed Facility

The proposed typical section includes four travel lanes (12-foot wide inside lanes and 14-foot wide outside lanes), a center 15-foot median for left turns, 10-foot shoulders (two-foot paved and eight-foot grassed), and corresponding lane tapers. The proposed improvements to the US 21 roadway from Mercantile Place extending to the northern project limits would also include curb and gutter, a grassed strip, and sidewalk. Drainage ditches would be constructed alongside US 21 within the southern portion of the proposed roadway improvements.

Construction of the project would require the extension of seven existing drainage structures located on jurisdictional stream features. There will be a total of 0.099 acre of total wetland impacts with 0.054 acre being permanent in Phase I and 0.885 acre of total wetland impacts with 0.778 acre being permanent in Phase II for a combined project total of 0.832 acre of permanent wetland impacts (See Table 1).There will be a total of 635 linear feet of permanent stream impacts in the Phase I section and 743 linear feet of permanent impacts in the Phase II section for a combined project total of 1,378 linear feet of permanent stream impacts (See Table 2).

Construction of the Phase I project is anticipated to begin in 2022 with Phase II beginning in 2025. The project would be constructed utilizing staged construction methods in order to keep the existing roadways open to traffic during construction.

33. Overall Project Purpose and the Basic Purpose of Each Activity In or Affecting U.S. Waters

The purpose of the project is to improve US 21 and SC 51 and associated intersecting roadways to current SCDOT design standards to accommodate existing and future traffic loads and provide safer, more efficient travel ways for vehicles traveling on these roadways. US 21 serves as a primary route for vehicular traffic between the Town of Fort Mill and I-77, while SC 51 serves as a primary route for motorists traveling between US 21 and townships and cities in North Carolina.

The project as proposed is a single complete project with independent utility. The realignment and modifications to the roadways are not dependent on any larger actions for justification and the proposed work does not require prior or simultaneous actions to be taken for the project to be complete and successful.

36. Individually list wetland impacts including mechanized clearing, fill, excavation, flooding, draining, shading, etc. and attach a site map with location of each impact

Table 1. Summary of Impacts to Jurisdictional Wetlands

Impact No.	Wetland Type	Distance to Receiving Water body (LF)	Purpose of Impact (road crossing, impoundment, flooding, etc)	Impact Size (acres)
Phase I				
Wetland E	Freshwater wetland	0	drainage pipe installation	0.001
Wetland F	Freshwater wetland	0	roadway widening/culvert	0.066
Wetland G	Freshwater wetland	0	roadway widening	0.002
			Phase I Total	**0.099**
Phase II				
Wetland BB	Freshwater wetland	0	roadway widening/culvert	0.007
Wetland CC	Freshwater wetland	0	roadway widening/culvert	0.087

Impact No.	Wetland Type	Distance to Receiving Water body (LF)	Purpose of Impact (road crossing, impoundment, flooding, etc)	Impact Size (acres)
Wetland FF	Freshwater wetland	0	roadway widening/culvert	0.791
			Phase II Total	**0.885**
			Combined Project Total	**0.984**

37. Individually list all seasonal and perennial stream impacts and attach a site map with location of each impact

Table 2. Summary of Impacts to Jurisdictional Non-wetlands Waters

Impact No.	Seasonal or Perennial Flow	Average Stream Width (LF)	Impact Type (road crossing, impoundment, flooding, etc)	Length (LF)
Phase I				
Tributary A	Perennial	5	roadway widening/culvert	137
Tributary C	Perennial	6	roadway widening/culvert	270
Tributary D	Perennial	6	roadway widening/culvert	228
			Phase I Total	**635**
Phase II				
Tributary B	Perennial	7	roadway widening/culvert	162
Tributary C	Perennial	5	roadway widening/culvert	121
Tributary D	Perennial	8	roadway widening/culvert	147
Tributary E	Perennial	5	roadway widening/culvert	51
Tributary F	Perennial	7	roadway widening/culvert	262
			Phase II Total	**743**
			Combined Project Total	**1,378**

39. Describe measures taken to avoid and minimize impacts to Waters of the United States

The proposed project was designed to minimize adverse impacts to the human and natural environment, including jurisdictional waters of the U.S., to the maximum extent practicable; however, impacts to jurisdictional waters of the U.S. are unavoidable and necessary for construction of the project.

Efforts to avoid and/or minimize project impacts include the following:

- Fill slopes for the new roadways at the stream crossings along US 21 have been designed at 2:1 thereby reducing the length necessary of the proposed drainage structures and minimizing the impact footprint
- The extent (amount) of riprap proposed within the jurisdictional streams at the outfalls of the culverts and pipes has been determined through detailed hydraulic analyses and is the minimum amount necessary to adequately dissipate water flows and prevent scouring and bank failure during significant rainfall events. The placement of the riprap will not result in the loss of overall stream function or disrupt downstream hydrologic connectivity.
- Sediment and erosion control measures consistent with state-approved BMPs would be installed and monitored/maintained prior to, during, and immediately following project construction to prevent runoff and sedimentation of jurisdictional waters.
- Orange barrier fencing will be installed along the boundaries of jurisdictional waters (streams and wetlands) located outside the project limits but within the right-of-way as an additional form of protection and impact avoidance.
- Phase II alignment was shifted to avoid impacts to Schweinitz's sunflowers

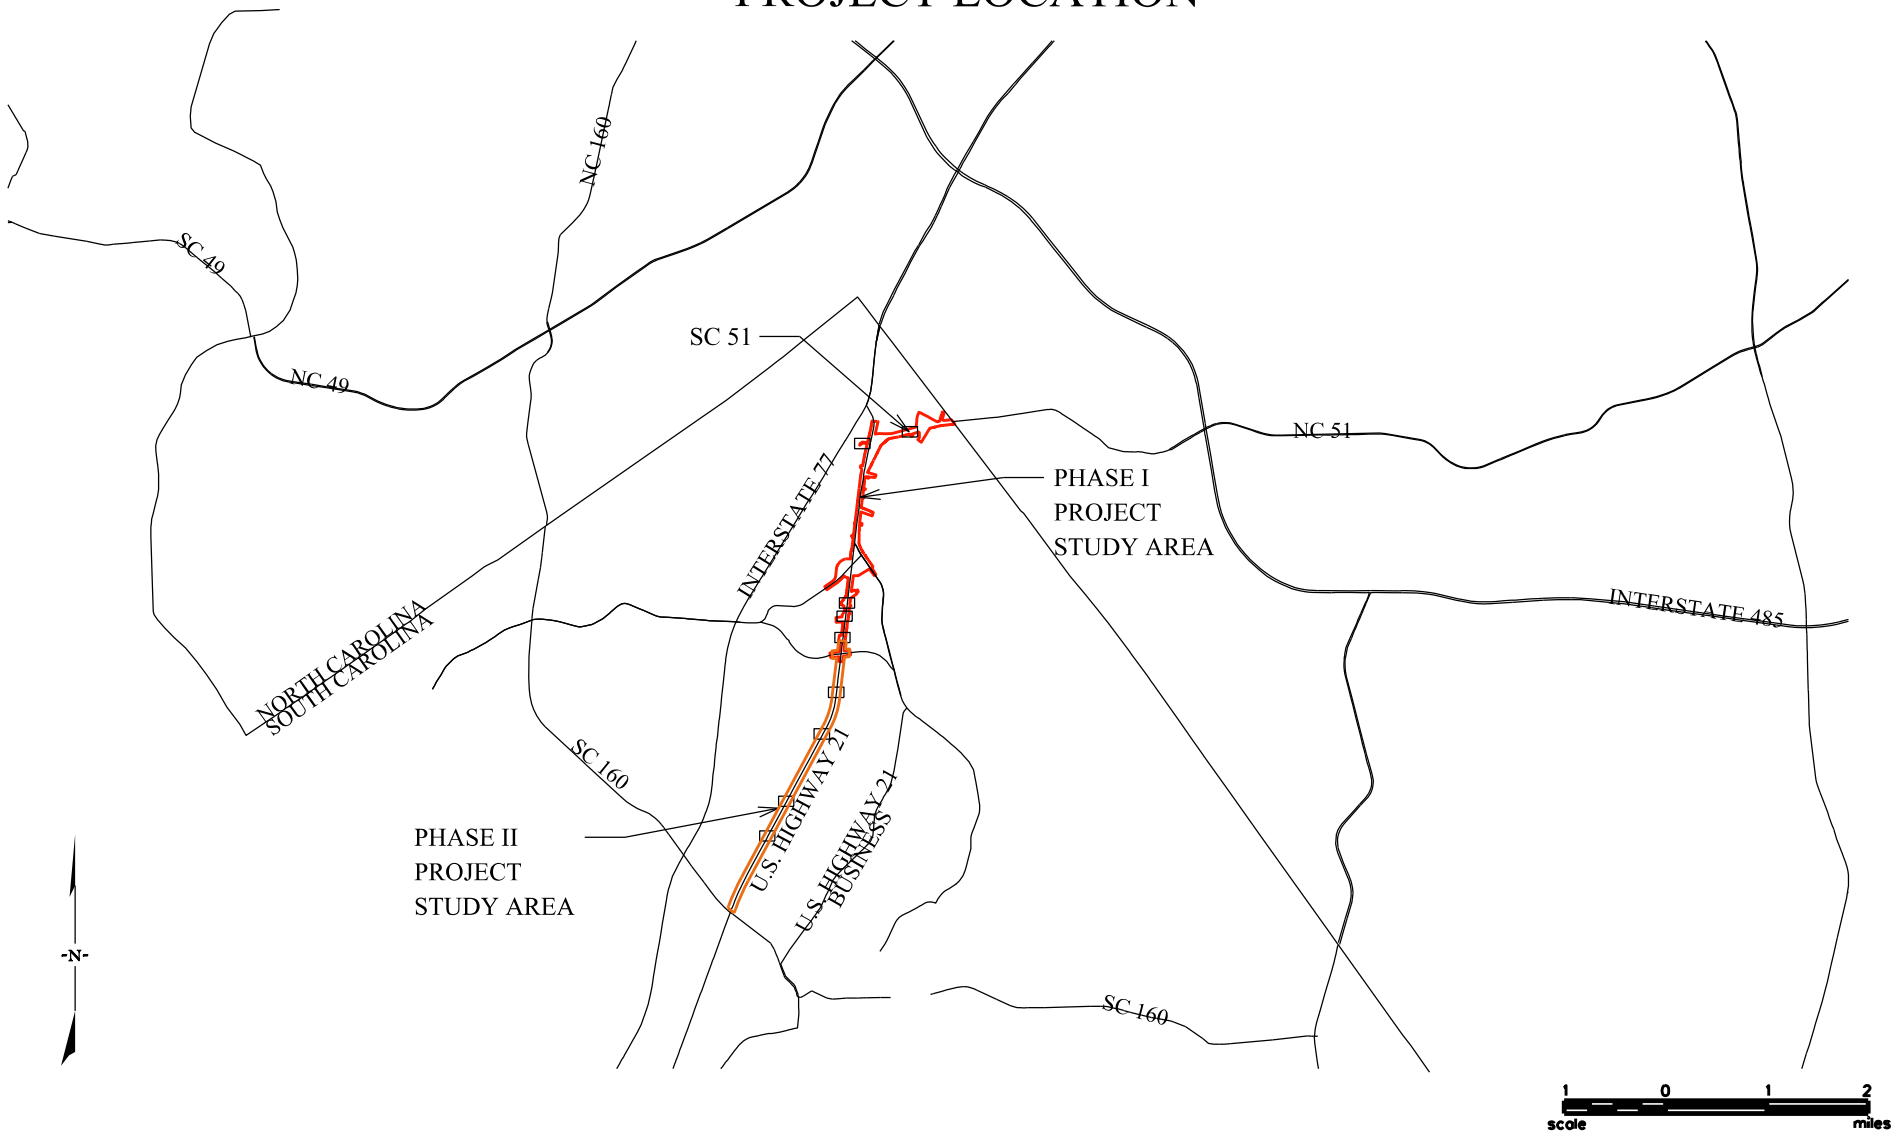
40. Provide a brief description of the proposed mitigation plan to compensate for impacts to aquatic resources or provide justification as to why mitigation should not be required

Per the U.S. Army Corps of Engineers (USACE) Charleston District's guidance document entitled 'Guidelines for Preparing a Compensatory Mitigation Plan' (October 2010), it has been determined that the proposed project would require 6969.8 stream credits and 9.8042 freshwater wetland credits to compensate for impacts to jurisdictional waters of the U.S.

As compensatory mitigation for the impacts, York County will purchase 6969.8 stream credits and 9.8042 wetland credits from a USACE-approved mitigation banks. The County is currently in the process of reserving the required stream and wetland credits from multiple banks that service the area. At least half of the credits will be in the form of restoration credits and the remaining will be in the form of preservation credits. All required mitigation credits will be purchased and documentation of said purchase(s) provided to the USACE before the project begins construction.

41. See the attached sheet to list the names and addresses of adjacent property owners.

42. List all Corps Permit Authorizations and other Federal, State, or Local Certifications, Approvals, Denials received for work described in this application.



A Jurisdictional Determination (SAC 2015-00812-DS) for the Phase I project study area was issued on July 1, 2016. A revision to the Phase I Jurisdictional Determination (SAC 2015-00812-DS) was issued on November 23, 2021. A Jurisdictional Determination for Phase II (SAC 2019-013980 was issued on was received on January 23, 2020.

PLAN

DETAIL 2
SCALE 1/4":1'
SIDE ELEVATION (POSITION OF EXTENSION ASSEMBLY FOR FINISHED GRADE)

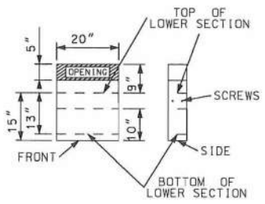
DETAIL 6
SCALE 1/4":1'
POSITION OF EXTENSION ASSEMBLY FOR SUBGRADE

NOTES:

1. 16 GAUGE ALUMINUM ALCLAD 3004 TO BE USED THROUGHOUT INTAKE SPILLWAY ASSEMBLY, FABRICATED FROM FLAT SMOOTH METAL. USE ALUMINUM OR GALVANIZED STEEL FASTENERS.

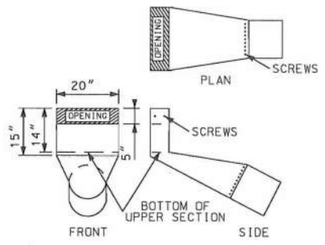
2. TELESCOPED SECTION OF BOX TO BE FABRICATED TO OBTAIN A SNUG FIT SECURED WITH SCREWS AS INDICATED.

3. CONCRETE CURB ADJACENT TO BRIDGES SHALL BE CONSTRUCTED AT A LOCATION THAT WILL NOT INTERFERE WITH FUTURE PLACEMENT OF GUARDRAIL.



4. PIPE SLOPE DRAIN TO BE EXTENDED TO BERM DITCH WHERE THEY OCCUR, OTHERWISE, EXTEND TO GRADE POINT OF OUTLET DRAIN WITHIN RIGHT-OF-WAY.

5. END PROTECTORS SHALL BE CAST IN PLACE WITH CLASS 3000 OR BETTER CONCRETE.



6. SURFACE COURSE TO BE PAID FOR IN THE UNIT CONTRACT PRICE BID FOR HOT MIX ASPHALT CONCRETE SURFACE COURSE. USE PAVEMENT MATERIAL TO MATCH ROADWAY PAVEMENT.

7. THE PAY ITEMS SHALL BE:

8035000 METAL INTAKE SPILLWAY ASSEMBLY_____EACH
8034120 12" PIPE SLOPE DRAIN_____L.F.
8036120 12" SLOPE DRAIN END PROTECTOR_____EACH
7211000 BITUMINOUS CURB_____L.F.

OUTLET PROTECTION WITH NO DEFINED CHANNEL

804-305-01

EFFECTIVE LETTING DATE | JULY 2017

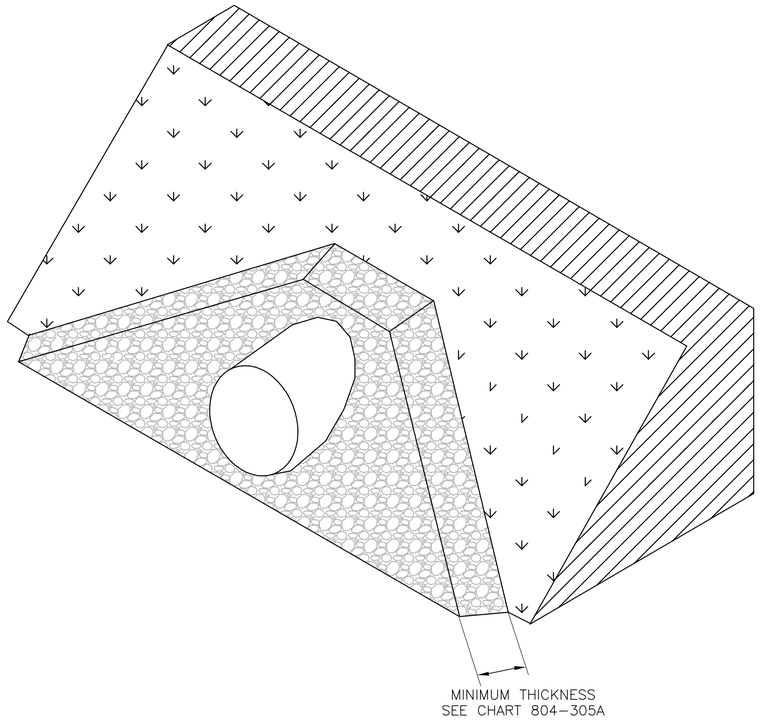

CHART 804-305A
SLOPE STABILIZATION RIPRAP PLACEMENT WITH MINIMUM TAILWATER

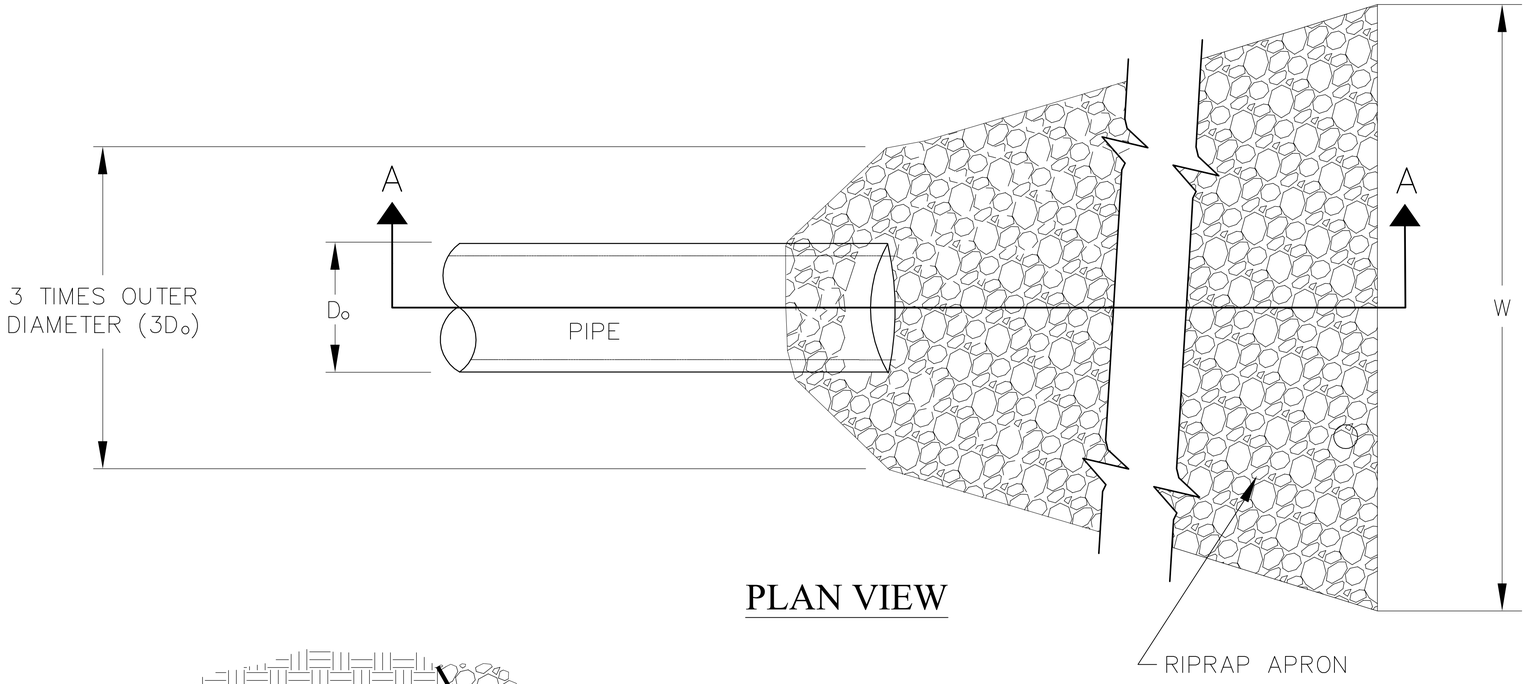
MINIMUM CLASS*	D_{50} (FT)	MINIMUM THICKNESS (FT)	OUTSIDE PIPE DIAMETER
A	0.50	1.00	UP TO 24"
B	0.75	1.50	UP TO 84"
C	1.30	2.60	LARGER THAN 84"

*WHEN RIPRAP APRON IS PRESENT, USE SAME CLASS OF RIPRAP ON SLOPE AS SPECIFIED FOR APRON. SEE DRAWING # 804-305-03 OR PLANS FOR APRON RIPRAP SPECIFICATIONS.

NOTES:

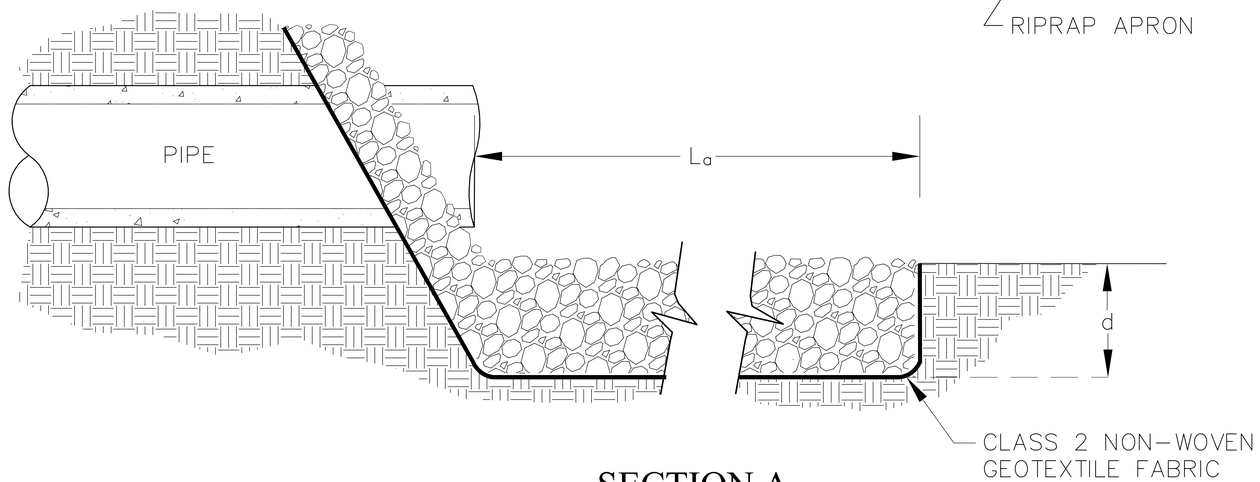
1) DESIGN OUTLET PROTECTION IN ACCORDANCE WITH THE SCDOT WATER QUALITY MANUAL.

2) OUTLET PROTECTION WILL HAVE A WIDTH THREE TIMES THE OUTSIDE DIAMETER OF THE OUTLET PIPE AT TOE OF SLOPE.



3) ADVANCE OUTLET PROTECTION UP THE SLOPE A MINIMUM OF 1 FOOT ABOVE TOP OF PIPE.

4) SEE DRAWINGS # 804-305-02 AND 804-305-03 FOR RIPRAP APRON DIMENSIONS.



4) THE PAY ITEMS MAY INCLUDE:

2031000	UNCLASSIFIED EXCAVATION_____CY
8041010	RIPRAP (CLASS A)_____TON
8041020	RIPRAP (CLASS B)_____TON
8041030	RIPRAP (CLASS C)_____TON
8042800	GEOTEXTILE FABRIC FOR EROSION CONTROL UNDER RIPRAP (CLASS 2)____SY
8151151	TURF REINFORCEMENT MATTING (TRM) TYPE 1_____SY
8151152	TURF REINFORCEMENT MATTING (TRM) TYPE 2_____SY
8151153	TURF REINFORCEMENT MATTING (TRM) TYPE 3_____SY

THIS DRAWING IS NOT TO SCALE

PLAN VIEW

SECTION A

NOTES:

1) L_a = THE LENGTH OF THE RIPRAP APRON.

2) W = WIDTH OF OUTLET PROTECTION AT END OF RIPRAP APRON.

3) D_o = OUTER DIAMETER OF OUTLET PIPE.

4) $3D_o$ = WIDTH OF OUTLET PROTECTION AT TOE OF SLOPE AT PIPE OUTLET.

5) SEE DRAWING # 804-305-03 OR PLANS FOR DIMENSIONS L_a, W, AND $3D_o$.

6) d = DEPTH OF RIPRAP = 2.0 TIMES THE MAXIMUM RIPRAP DIAMETER.

7) SEE DRAWING # 804-305-01 FOR RIPRAP SLOPE STABILIZATION AROUND PIPE.

STANDARD DRAWING

TYPE A
INLET STRUCTURE
FILTERS

815-001-01

EFFECTIVE LETTING DATE | JUL 2017

THIS DRAWING IS NOT TO SCALE

INSTALLATION:

1. FILTER FABRIC IS USED FOR INLET PROTECTION WHEN STORMWATER FLOWS ARE RELATIVELY SMALL (1.0 CFS OR LESS) WITH LOW VELOCITIES, WHERE THE INLET DRAINS AREA HAS GRADES NO GREATER THAN 5% AND THE IMMEDIATE DRAINAGE AREA AROUND THE INLET (5 FOOT RADIUS) HAS GRADES LESS THAN 1%. DO NOT USE IN AREAS RECEIVING CONCENTRATED FLOW OR WHERE DITCHES ARE PAVED. A TRENCH SHALL BE EXCAVATED 6 INCHES WIDE AND 6 INCHES DEEP AROUND THE OUTER PERIMETER OF THE STAKES UNLESS FABRIC IS PNEUMATICALLY INSTALLED.

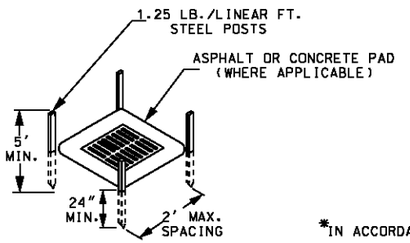
2. FILTER FABRIC SHALL CONFORM TO SCDOT STANDARD SPECIFICATIONS FOR HIGHWAY CONSTRUCTION (LATEST EDITION). FILTER FABRIC SHALL EXTEND A MINIMUM OF 12 INCHES INTO THE TRENCH. THE TRENCH SHALL BE BACKFILLED WITH SOIL OR CRUSHED STONE AND COMPACTED OVER THE FILTER FABRIC UNLESS FABRIC IS PNEUMATICALLY INSTALLED.

3. USE STEEL POSTS WITH A MINIMUM POST LENGTH OF 5 FEET CONSISTING OF STANDARD "T" SECTIONS WITH A WEIGHT OF 1.25 POUNDS PER FOOT (±8%). THE HEIGHT OF THE FILTER BARRIER ABOVE GROUND SHALL BE A MINIMUM OF 24 INCHES. POSTS SHALL BE SPACED AROUND THE PERIMETER OF THE INLET A MAXIMUM OF 2 FEET APART AND DRIVEN INTO THE GROUND A MINIMUM OF 24 INCHES. ATTACH FABRIC TO POSTS USING ONLY HEAVY DUTY PLASTIC TIES. ATTACH AT LEAST 4 EVENLY SPACED TIES IN A MANNER TO PREVENT SAGGING OR TEARING OF THE FABRIC.

4. FILTER FABRIC SHOULD BE IN A CONTINUOUS ROLL AND CUT TO THE LENGTH OF THE PROTECTED AREA TO AVOID THE USE OF JOINTS. WHEN JOINTS ARE NECESSARY, FILTER FABRIC SHOULD BE WRAPPED TOGETHER ONLY AT A SUPPORT POST WITH BOTH ENDS SECURELY FASTENED TO THE POST WITH A MINIMUM 6 INCH OVERLAP.

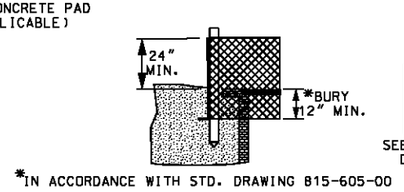
5. PROVIDE A FILTER FABRIC CAPABLE OF REDUCING EFFLUENT SEDIMENT CONCENTRATIONS BY NOT LESS THAN 80% UNDER TYPICAL SEDIMENT MIGRATION CONDITIONS.

INSPECTION AND MAINTENANCE:



1. INSPECTIONS SHOULD BE MADE EVERY SEVEN (7) CALENDAR DAYS. ANY NEEDED REPAIRS SHOULD BE HANDLED IMMEDIATELY.

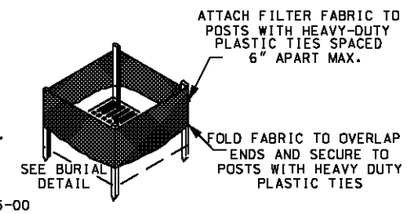
2. IF THE FABRIC BECOMES CLOGGED, IT SHOULD BE REPLACED.



3. SEDIMENT SHOULD BE REMOVED WHEN IT REACHES APPROXIMATELY 1/3 THE HEIGHT OF THE FILTER FABRIC. IF A SUMP IS USED, SEDIMENT SHOULD BE REMOVED WHEN IT FILLS APPROXIMATELY 1/3 THE DEPTH OF THE HOLE. MAINTAIN THE POOL AREA, ALWAYS PROVIDING ADEQUATE SEDIMENT STORAGE VOLUME FOR THE NEXT STORM. TAKE CARE NOT TO DAMAGE OR UNDERCUT FABRIC WHEN REMOVING SEDIMENT. CLEANING INLET STRUCTURE FILTERS IS PAID FOR EACH (EA) FILTER CLEANED OF DEPOSITED SEDIMENT FROM THE AREA ADJACENT TO EACH INLET STRUCTURE FILTER.

4. STORM DRAIN INLET PROTECTION STRUCTURES SHOULD BE REMOVED ONLY AFTER THE DISTURBED AREAS ARE PERMANENTLY STABILIZED. REMOVE ALL CONSTRUCTION MATERIAL AND SEDIMENT, AND DISPOSE OF THEM PROPERLY. GRADE THE DISTURBED AREA TO DRAIN. USE APPROPRIATE PERMANENT STABILIZATION METHODS TO STABILIZE BARE AREAS AROUND THE INLET.

5. THE PAY ITEMS SHALL BE:
   8156219 INLET STRUCTURE FILTER TYPE A_____LF
   8154155 CLEANING INLET STRUCTURE FILTERS_____EA



POST INSTALLATION DETAIL

*IN ACCORDANCE WITH STD. DRAWING 815-605-00

FILTER FABRIC BURIAL DETAIL

FILTER FABRIC INSTALLATION DETAIL

TYPE A
LOW FLOW INLET FILTERS
(FILTER FABRIC INLET PROTECTION)

INSTALLATION:

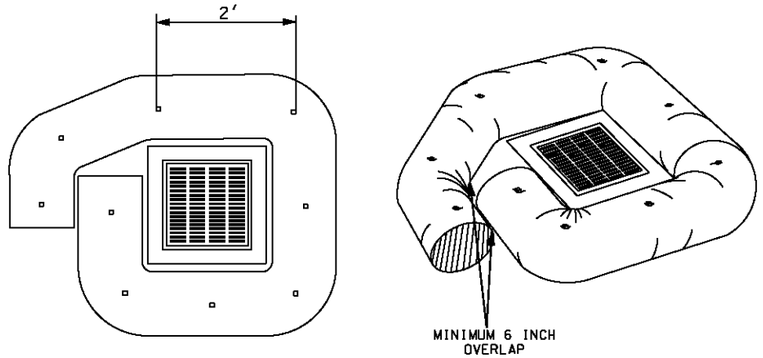
1. INSTALL SEDIMENT TUBES BY LAYING THEM FLAT ON THE GROUND. CONSTRUCT A SMALL TRENCH TO A DEPTH THAT IS 20% OF THE SEDIMENT TUBE DIAMETER. LAY THE SEDIMENT TUBE IN THE TRENCH AND COMPACT THE UPSTREAM SEDIMENT TUBE/SOIL INTERFACE. INSTALL ALL SEDIMENT TUBES SO NO GAPS EXIST BETWEEN THE SOIL AND THE BOTTOM OF THE SEDIMENT TUBE. LAP THE ENDS OF ADJACENT SEDIMENT TUBES A MINIMUM OF 6 INCHES TO PREVENT FLOW AND SEDIMENT FROM PASSING THROUGH THE FIELD JOINT. NEVER STACK SEDIMENT TUBES ON TOP OF ONE ANOTHER.

2. SHOULD SEDIMENT TUBE BECOME DAMAGED DURING INSTALLATION, PLACE A STAKE ON BOTH SIDES OF THE DAMAGED AREA TERMINATING THE TUBE SEGMENT AND INSTALL A NEW TUBE SEGMENT.

3. INSTALL SEDIMENT TUBES USING WOODEN STAKES WITH A MINIMUM POST LENGTH OF 4 FEET AND A MINIMUM MEASURED DIMENSION OF ¾" X ¾" AND A MAXIMUM MEASURED DIMENSION OF 2" X 2". OR USING STEEL POSTS (1.25lbs./linear foot). USE STEEL POSTS WITHOUT A SOIL PLATE AND PAINTING IS NOT REQUIRED. SPACE POSTS OR STAKES ON 2-FOOT CENTERS AND DRIVE THEM INTO THE GROUND TO A MINIMUM DEPTH OF 2 FEET. INSTALL THE STAKES ON THE DOWNSTREAM (1/3) OF THE SEDIMENT TUBE. ENSURE THE AREAS FOR STAKE INSTALLATION ARE COMPACTED SO THE POSTS ARE PROPERLY INSTALLED.

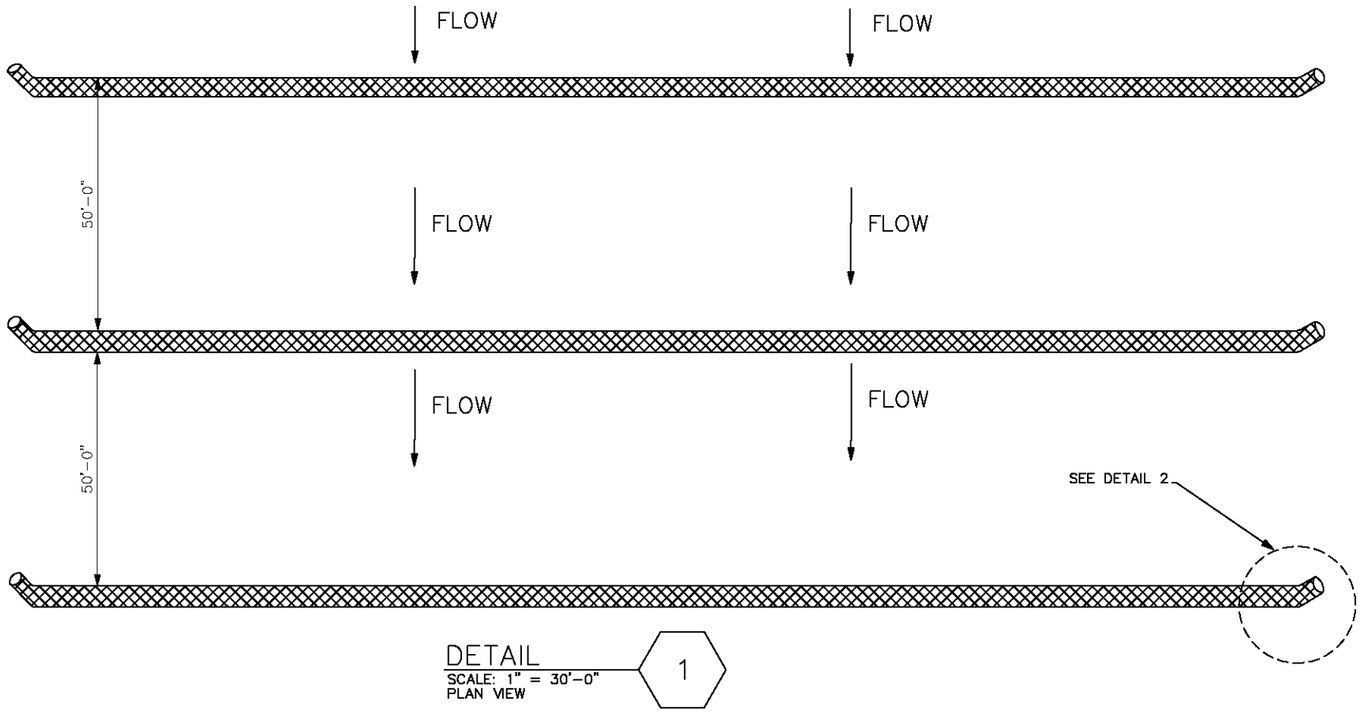
INSPECTION AND MAINTENANCE:

1. INSPECT SEDIMENT TUBES AFTER INSTALLATION FOR GAPS UNDER THE SEDIMENT TUBES AND FOR GAPS BETWEEN THE JOINTS OF ADJACENT ENDS OF SEDIMENT TUBES. REPAIR RILLS, GULLIES, AND ALL UNDERCUTTING NEAR SEDIMENT TUBES. INSPECT SEDIMENT TUBES EVERY 7 DAYS.



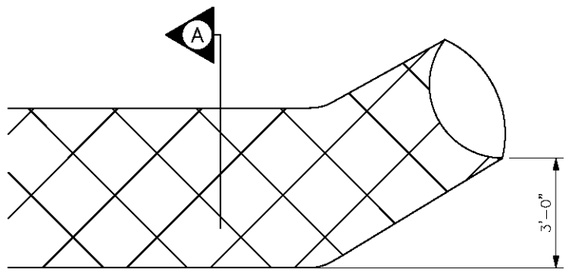
2. REMOVE SEDIMENT WHEN IT REACHES APPROXIMATELY ½ HEIGHT OF THE INLET STRUCTURE FILTER. IF A SUMP IS USED, REMOVE SEDIMENT WHEN IT FILLS APPROXIMATELY ½ THE DEPTH OF THE HOLE. MAINTAIN THE POOL AREA, ALWAYS PROVIDING ADEQUATE SEDIMENT STORAGE VOLUME FOR THE NEXT STORM EVENT. CLEANING INLET STRUCTURE FILTER IS PAID FOR EACH (EA) FILER CLEANED OF DEPOSITED SEDIMENT FROM THE AREA ADJACENT TO EACH INLET STRUCTURE FILTER.

3. REMOVE AND/OR REPLACE INSTALLED SEDIMENT TUBES AS REQUIRED TO ADAPT TO CHANGING CONSTRUCTION SITE CONDITIONS.



4. REMOVE ALL SEDIMENT TUBES FROM THE SITE WHEN THE FUNCTIONAL LONGEVITY IS EXCEEDED AS DETERMINED BY THE ENGINEER, INSPECTOR, OR MANUFACTURER'S REPRESENTATIVE.

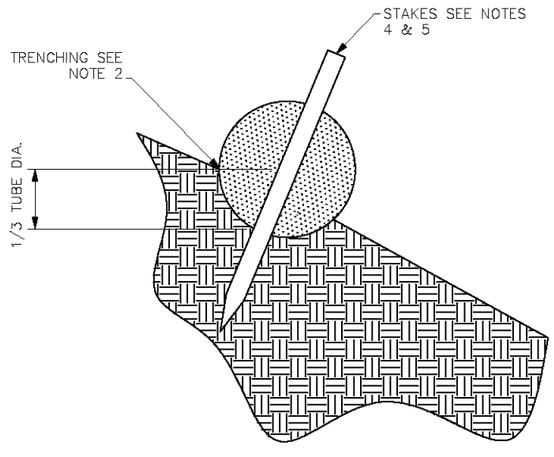
5. DISPOSE OF SEDIMENT TUBES BY REGULAR MEANS AS NON-HAZARDOUS, INERT MATERIAL.



6. THE PAY ITEMS SHALL BE:
   8156219 INLET STRUCTURE FILTER TYPE A_____LF
   8154155 CLEANING INLET STRUCTURE FILTERS_____EA

TYPE A
LOW FLOW INLET FILTERS
(SEDIMENT TUBE INLET PROTECTION)

DETAIL 1
SCALE: 1" = 30'-0"
PLAN VIEW



DETAIL 2

END VIEW OF TYPE F SLOPE INTERRUPTION DEVICE

THIS DRAWING IS NOT TO SCALE

NOTES:

1. INSTALL ALL NON-WEIGHTED INLET TUBES FOR SLOPE INTERRUPTION DEVICES FOR HECP APPLICATION PRIOR TO THE HECP INSTALLATION.
2. EXCAVATE A TRENCH ALONG (PARALLEL) THE CONTOUR OF THE SLOPE TO A DEPTH THAT IS ⅓ THE TUBE DIAMETER. PLACE THE EXCAVATED SOIL ON THE UP-SLOPE SIDE OF THE TRENCH. PLACE THE SLOPE INTERRUPTION DEVICE INTO THE TRENCH SO IT CONTOURS TO THE SOIL SURFACE, ENSURING NO GAPS EXISTS UNDERNEATH THE TUBE. COMPACT THE EXCAVATED SOIL AGAINST THE TUBE ON THE UP-SLOPE SIDE. ENSURE THE INSTALLATION OF THE SLOPE INTERRUPTION DEVICE DOES NOT DAMAGE THE PREPARED SEEDBED.
3. INSTALL NON-WEIGHTED INLET TUBES SLOPE INTERRUPTION DEVICES FOR ECB APPLICATION AFTER THE ECB INSTALLATION ON TOP OF THE ECB. TUBE TRENCHING IS NOT REQUIRED FOR ECB APPLICATIONS. ENSURE THE INSTALLATION OF THE SLOPE INTERRUPTION DEVICE DOES NOT DAMAGE THE INSTALLED ECB.
4. INSTALL NON-WEIGHTED INLET TUBE FOR SLOPE INTERRUPTION DEVICES USING WOODEN STAKES WITH A MINIMUM LENGTH OF 3' WITH A MINIMUM MEASURED DIMENSION OF ¾" X ¾" AND A MAXIMUM MEASURED DIMENSION OF 1" X 1". DO NOT USE STEEL POSTS FOR THIS APPLICATION . INSTALL A STAKE AT EACH END OF EACH TUBE AND SPACE STAKES ON MAXIMUM 4' CENTERS. DRIVE STAKES INTO THE GROUND PERPENDICULAR TO THE SLOPE TO A DEPTH OF 2' OR TO THE MAXIMUM EXTENT PRACTICABLE.
5. INSTALL THE STAKES THROUGH THE CENTER OF THE NON-WEIGHTED TUBE.
6. ABUT ADJACENT TUBES TIGHTLY, END TO END, WITHOUT OVERLAPPING THE ENDS. TIE THE TUBE ENDS TOGETHER USING HEAVY TWINE OR PLASTIC LOCKING TIES. TURN ENDS UP OF INTERRUPTION DEVICES UP SLOPE TO ENSURE CONTAINMENT AND THE PREVENTION OF CHANNELING OF RUNOFF.
7. ENSURE THE AREAS FOR POST INSTALLATION ARE COMPACTED SO THE POSTS ARE PROPERLY INSTALLED.
8. PAY SHALL BE:
   8152006 INLET STRUCTURE FILTER TYPE F (nonweighted)_____ LF

ROOM 405
COLUMBIA, SC 29201

STANDARD DRAWING

TYPE F SLOPE INTERRUPTION DEVICE

815-001-02
EFFECTIVE LETTING DATE JUL 2017

GENERAL NOTES:

1. THESE ARE APPLICABLE FOR INLETS WITH PEAK FLOW RATES LESS THAN 3 CFS WHERE THE INLET DRAIN AREA HAS GRADES LESS THAN 5%. FLOW VELOCITIES TO THE INLET MAY NOT EXCEED 3 FEET PER SECOND. USE THESE WHERE OVERFLOW CAPACITY IS NOT REQUIRED TO PREVENT EXCESSIVE PONDING AROUND THE STRUCTURE.

INSTALLATION:

1. HARDWARE FABRIC, OR COMPARABLE WIRE MESH, WITH A MAXIMUM OF 0.5 INCH X 0.5 INCH OPENINGS SHALL BE USED AS THE SUPPORTING MATERIAL AND SHALL BE EXTENDED A MINIMUM 6 INCHES INTO THE GROUND.

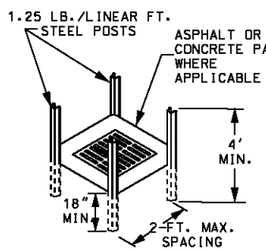
2. POSTS SHALL BE 1.25 LB./LINEAR FOOT STEEL POSTS WITH A MINIMUM POST LENGTH OF 48 INCHES. THE HEIGHT OF THE HARDWARE FABRIC ABOVE GRADE SHALL BE A MINIMUM OF 18 INCHES.

3. THE STEEL POSTS SHALL BE SPACED A MAXIMUM OF 2 FEET APART AROUND THE PERIMETER OF THE INLET AND DRIVEN INTO THE GROUND A MINIMUM OF 18 INCHES.

4. HEAVY DUTY WIRE TIES SPACED A MAXIMUM OF 6 INCHES APART SHALL BE USED TO ATTACH THE HARDWARE FABRIC MATERIAL TO THE STEEL POSTS.

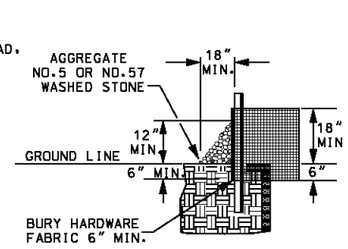
5. THE STONE SHALL CONSIST OF AGGREGATE NO. 5 OR NO. 57 WASHED STONE AND SHALL EXTEND TO A MINIMUM HEIGHT OF 12 INCHES AND SHALL NOT EXCEED 24 INCHES AGAINST ALL 4 SIDES OF THE HARDWARE FABRIC.

INSPECTION AND MAINTENANCE:



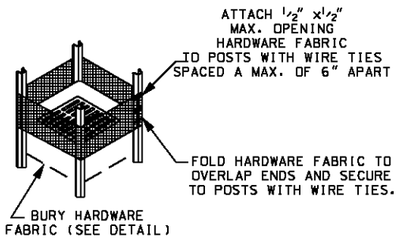
1. INSPECTIONS SHOULD BE MADE EVERY SEVEN (7) CALENDAR DAYS. ANY NEEDED REPAIRS SHOULD BE HANDLED IMMEDIATELY.

2. SEDIMENT SHOULD BE REMOVED WHEN IT REACHES APPROXIMATELY 1/3 THE HEIGHT OF THE STRUCTURE. IF A SUMP IS USED, SEDIMENT SHOULD BE REMOVED WHEN IT FILLS APPROXIMATELY 1/3 THE DEPTH OF THE HOLE. MAINTAIN THE POOL AREA, ALWAYS PROVIDING ADEQUATE SEDIMENT STORAGE VOLUME FOR THE NEXT STORM. CLEANING INLET STRUCTURE FILTERS IS PAID FOR EACH (EA) FILTER CLEANED OF DEPOSITED SEDIMENT FROM THE AREA ADJACENT TO EACH INLET STRUCTURE FILTER.



3. IF THE STONE BECOMES CLOGGED WITH SEDIMENT, THE STONES MUST BE PULLED AWAY FROM THE INLET AND CLEANED OR REPLACED. SINCE CLEANING OF GRAVEL AT A CONSTRUCTION SITE MAY BE DIFFICULT, AN ALTERNATIVE APPROACH WOULD BE TO REMOVE THE CLOGGED STONE AS FILL AND PUT FRESH STONE AROUND THE INLET. NO SEPARATE MEASUREMENT OR PAYMENT WILL BE MADE FOR THIS WORK.

4. STORM DRAIN INLET PROTECTION STRUCTURES SHOULD BE REMOVED ONLY AFTER THE DISTURBED AREAS ARE PERMANENTLY STABILIZED. REMOVE ALL CONSTRUCTION MATERIAL AND SEDIMENT, AND DISPOSE OF THEM PROPERLY. GRADE THE DISTURBED AREA TO DRAIN. STABILIZE ALL BARE AREAS IMMEDIATELY.



5. THE PAY ITEMS SHALL BE:
   8156210 INLET STRUCTURE FILTER TYPE B_____EA
   8154155 CLEANING INLET STRUCTURE FILTERS_____EA

POST INSTALLATION DETAIL

STONE AND HARDWARE FABRIC INSTALLATION DETAIL

HARDWARE FABRIC AND STONE INLET PROTECTION

TYPE B
MEDIUM FLOW, LOW VELOCITY INLET FILTERS

THIS DRAWING IS NOT TO SCALE

GENERAL NOTES:

TYPE D INLET FILTERS ARE APPLICABLE FOR DRAINAGE AREAS UP TO 2 ACRES WITH PEAK FLOW RATES GREATER THAN 3 CFS AND DRAINAGE AREAS WITH GRADES GREATER THAN 5%. FLOW VELOCITIES MAY EXCEED 3 FEET PER SECOND. HIGH FLOW, HIGH VELOCITY INLET FILTERS ARE PREFABRICATED AND WILL DIFFER ACCORDING TO THE TYPE OF DRAIN BEING PROTECTED.

THEY EXHIBIT THE FOLLOWING PROPERTIES:

1) COMPOSED OF A GEOTEXTILE FABRIC CONNECTED TO A RIGID STRUCTURE. THE GEOTEXTILE FABRIC IS NON-BIODEGRADABLE, RESISTANT TO DEGRADATION BY ULTRAVIOLET EXPOSURE, AND RESISTANT TO CONTAMINANTS COMMONLY ENCOUNTERED IN STORMWATER.

2) PROVIDE A RIGID STRUCTURE RESISTANT TO DEGRADATION BY ULTRAVIOLET EXPOSURE AND RESISTANT TO CONTAMINANTS COMMONLY ENCOUNTERED IN STORMWATER. PROVIDE A RIGID STRUCTURE THAT IS REUSABLE. DO NOT USE RIGID STRUCTURES COMPOSED OF STEEL, REBAR, CONCRETE OR WOOD.

3) PROVIDE A FILTER FABRIC CONSTRUCTED TO PROVIDE A DIRECT FIT ADJACENT TO THE ASSOCIATED RIGID STRUCTURE AND IS CAPABLE OF REDUCING EFFLUENT SEDIMENT CONCENTRATIONS BY NOT LESS THAN 80% UNDER TYPICAL SEDIMENT MIGRATION CONDITIONS.

4) HIGH FLOW, HIGH VELOCITY INLET FILTERS HAVE A TWO STAGE DESIGN. THE FIRST STAGE CONVEYS NORMAL FLOWS AT A MINIMUM CLEAN WATER FLOW RATE OF 100 GALLONS PER MINUTE PER SQUARE FOOT. THE SECOND STAGE CONVEYS HIGH FLOW RATES, WITH A MINIMUM APPARENT OPENING OF 0.5 INCH PER SQUARE INCH (NUMBER 12 STANDARD SIEVE OPENING).

5) TYPE D1 INLET FILTERS HAVE A FIRST STAGE MINIMUM HEIGHT OF 9 INCHES AND A MAXIMUM HEIGHT OF 12 INCHES IN ORDER TO ALLOW GREATER OVERFLOW CAPACITY AND PREVENT PONDING IN THE MEDIAN.

6) TYPE D2 INLET STRUCTURE FILTERS USED FOR SUMP APPLICATIONS HAVE A FIRST STAGE MINIMUM HEIGHT OF 12" AND A FIRST STAGE MAXIMUM HEIGHT OF 30" IN ORDER TO ALLOW GREATER PONDING IN THE SUMP.

7) HIGH FLOW, HIGH VELOCITY INLET FILTERS COMPLETELY SURROUND THE INLET.

8) HIGH FLOW, HIGH VELOCITY INLET FILTERS HAVE LIFTING DEVICES OR STRUCTURES TO ASSIST IN THE INSTALLATION AND TO ALLOW INSPECTION OF THE STORMWATER SYSTEM.

9) INLET STRUCTURE FILTER TYPE D1 IS TO BE USED IN MEDIAN APPLICATIONS, WHILE TYPE D2 IS TO BE USED IN SUMP APPLICATIONS. TYPE D1 INLET STRUCTURE FILTERS WILL HAVE GREATER OVERFLOW CAPACITY AND LESS FILTRATION AREA THAN TYPE D2 IN ORDER TO PREVENT PONDING IN THE MEDIANS. BOTH TYPES OF THESE INLET FILTERS ARE CAPABLE OF PROTECTING INLET STRUCTURES NOT ASSOCIATED WITH CURB INLETS AND MAY INCLUDE BUT ARE NOT LIMITED TO CATCH BASIN TYPE 9, YARD INLETS, DI 24 INCHES BY 24 INCHES, DI 24 INCHES BY 36 INCHES, AND MANHOLES.

INSTALLATION:

1. INSTALL TYPE D INLET FILTERS IN ACCORDANCE WITH THE MANUFACTURER'S WRITTEN INSTALLATION INSTRUCTIONS. SECURE TYPE D INLET FILTERS WITH #5 OR #57 STONE AS BALLAST IN LIEU OF SOIL WHEN SOIL IS RECOMMENDED BY THE MANUFACTURER. PROPERLY INSTALL TYPE D INLET FILTERS SO THE INLET IS COMPLETELY ENCLOSED.

INSPECTION AND MAINTENANCE:

1. INSPECT AFTER INSTALLATION TO INSURE THAT NO GAPS EXIST THAT MAY PERMIT SEDIMENT TO ENTER THE STORM DRAIN SYSTEM.

2. INSPECTIONS SHOULD BE MADE EVERY SEVEN (7) CALENDAR DAYS. ANY NEEDED REPAIRS SHOULD BE HANDLED IMMEDIATELY.

3. SEDIMENT SHOULD BE REMOVED WHEN IT REACHES APPROXIMATELY 1/3 THE HEIGHT OF THE FILTERS. CLEANING INLET STRUCTURE FILTERS IS PAID FOR EACH (EA) FILTER CLEANED OF DEPOSITED SEDIMENT FROM THE AREA ADJACENT TO EACH INLET STRUCTURE FILTER.

4. CLEAN THE RIGID INLET PROTECTION FILTER MATERIAL WHEN IT BECOMES COVERED OR CLOGGED WITH DEPOSITED SEDIMENT.

5. REPLACE THE RIGID INLET PROTECTION FILTER MATERIAL AS DIRECTED BY THE ENGINEER.

6. THE PAY ITEMS SHALL BE:
   8156205 INLET STRUCTURE FILTER TYPE D1_____D1_____EA
   8156207 FILTER MATERIAL FOR INLET STRUCTURE FILTER TYPE D1_____EA
   8156215 INLET STRUCTURE FILTER TYPE D2_____D2_____EA
   8156217 FILTER MATERIAL FOR INLET STRUCTURE FILTER TYPE D2_____EA
   8154155 CLEANING INLET STRUCTURE FILTERS_____EA

STANDARD DRAWING

TYPE E INLET STRUCTURE FILTERS

815-005-00

EFFECTIVE LETTING DATE | JUL 2017

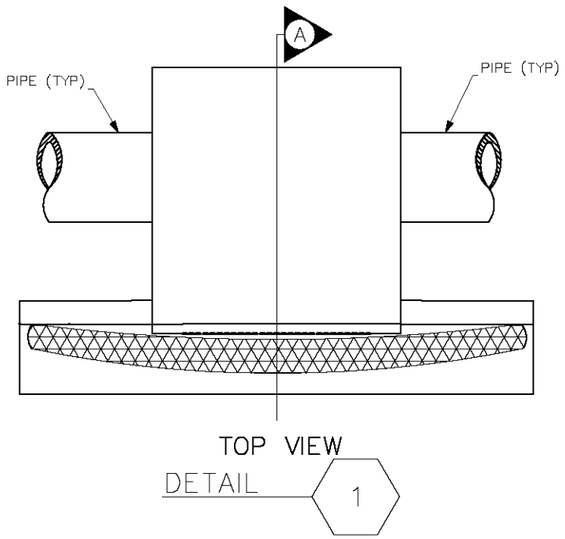
THIS DRAWING IS NOT TO SCALE

TOP VIEW

NOTES:

1. DRAWING SHOWS TYPE 16 CATCH BASIN. TYPE E INLET STRUCTURE FILTERS ARE APPLICABLE FOR CATCH BASIN TYPE 1, 16, 17, AND 18 AFTER THE ROAD SURFACE COURSE IS PLACED.

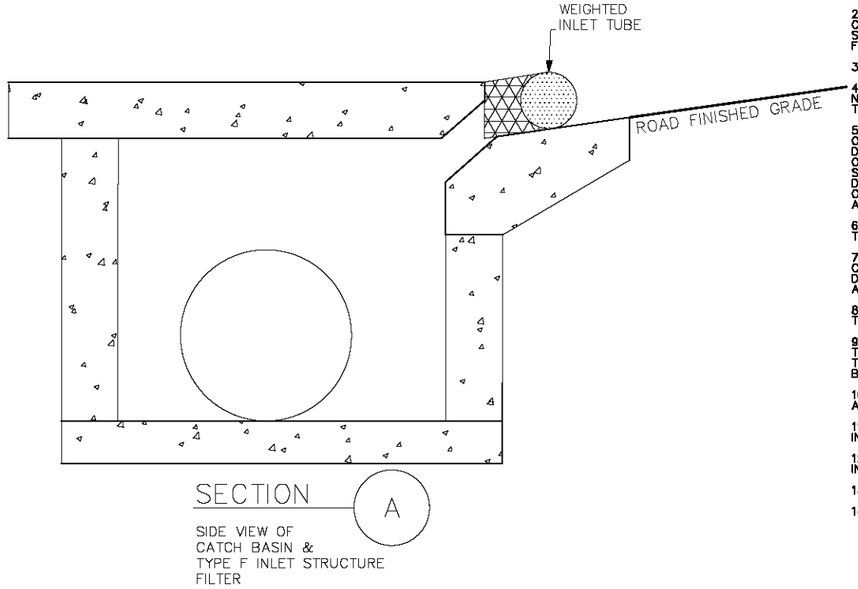
2. PLACE CURB INLET FILTER AS SHOWN IN AREA WHERE SEDIMENT MAY SPILL OVER SIDEWALK AND CURB AFTER BASE IS PLACED.



3. PROVIDE A TYPE E SURFACE COURSE INLET FILTER COMPOSED OF A UNIFORM FILTER FABRIC COVERING AN INTERNAL FILTER MATERIAL WHICH HAS AGGREGATE COMPARTMENTS FOR STONE, SAND OR OTHER WEIGHTED MATERIALS, OR PHYSICAL MECHANISMS TO HOLD THE UNIT IN PLACE. FURNISH A TYPE E SURFACE COURSE INLET FILTER THAT HAS A MAXIMUM HEIGHT THAT DOES NOT COMPLETELY BLOCK THE INLET OPENING AND A MINIMUM LENGTH THAT IS 2' LONGER THAN THE LENGTH OF THE CURB OPENING FOR FILTERS THAT DO NOT USE A PHYSICAL MECHANISM TO HOLD THE UNIT IN PLACE. DO NOT COMPLETELY BLOCK THE INLET OPENING WITH TYPE E SURFACE COURSE FILTERS TO ENSURE OVERFLOW CAN ENTER THE INLET OPENING.

4. PROVIDE A TYPE E SURFACE COURSE INLET FILTER COMPOSED OF A UNIFORM FILTER FABRIC THAT IS NON-BIODEGRADABLE AND RESISTANT TO DEGRADATION BY ULTRAVIOLET EXPOSURE AND RESISTANT TO CONTAMINANTS COMMONLY ENCOUNTERED IN STORMWATER. PROVIDE A TYPE E SURFACE COURSE INLET FILTER WITH FILTER MATERIAL THAT ALLOW STORMWATER TO FREELY FLOW WHILE TRAPPING SEDIMENT AND DEBRIS. ENSURE THAT THE FILTER MATERIAL IS RESISTANT TO CONTAMINANTS COMMONLY ENCOUNTERED IN STORMWATER. DO NOT USE STRAW BALES, PINE BALES, LEAF MULCH, OR GRASS CLIPPINGS AS FILTER MATERIALS.

5. WHEN A TYPE E SURFACE COURSE INLET FILTER UTILIZES A RIGID STRUCTURE, PROVIDE A REUSABLE RIGID STRUCTURE RESISTANT TO DEGRADATION BY ULTRAVIOLET EXPOSURE AND RESISTANT TO CONTAMINANTS COMMONLY ENCOUNTERED IN STORMWATER. DO NOT USE RIGID STRUCTURES COMPOSED OF STEEL, RE-BAR, CONCRETE OR WOOD.



6. PONDING IS LIKELY IF SEDIMENT IS NOT REMOVED REGULARLY. INSPECTION OF CURB INLET FILTER SHOULD BE MADE EVERY SEVEN (7) CALENDAR DAYS. ANY NEEDED REPAIRS SHOULD BE HANDLED IMMEDIATELY. THE CURB INLET FILTER SHOULD BE CLEANED IF A VISUAL INSPECTION SHOWS SILT AND DEBRIS BUILT UP AROUND THE FILTER. CLEANING INLET STRUCTURE FILTERS IS PAID FOR EACH (EA) FILTER CLEANED OF DEPOSITED SEDIMENT FROM THE AREA ADJACENT TO EACH INLET STRUCTURE FILTER.

7. THE PAY ITEMS SHALL BE:
   - 8156211 INLET STRUCTURE FILTER - TYPE E (CATCH BASIN TYPE 1)_____EA
   - 8156212 INLET STRUCTURE FILTER - TYPE E (CATCH BASIN TYPE 16)_____EA
   - 8156213 INLET STRUCTURE FILTER - TYPE E (CATCH BASIN TYPE 17)_____EA
   - 8156214 INLET STRUCTURE FILTER - TYPE E (CATCH BASIN TYPE 18)_____EA
   - 8154155 CLEANING INLET STRUCTURE FILTERS_____EA

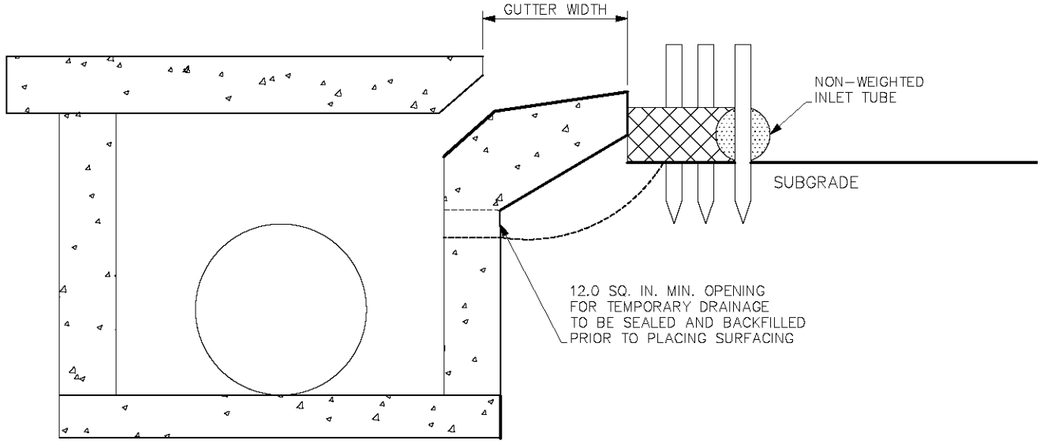
SIDE VIEW OF
CATCH BASIN &
TYPE F INLET STRUCTURE
FILTER

WEIGHTED INLET TUBE



NOTES:

1. DRAWING SHOWS TYPE 16 CATCH BASIN.
2. NON-WEIGHTED TUBES SHALL BE INSTALLED IMMEDIATELY AFTER GRADING AND CONSTRUCTION OF CATCH BASIN BOX. NON-WEIGHTED TUBES SHALL BE MAINTAINED DURING SUBGRADE AND BASE PREPARATION UNTIL BASE COURSE IS PLACED. THEY ARE APPLICABLE FOR CATCH BASIN TYPES 1, 16, 17, AND 18 WITH DRAINAGE AREAS LESS THAN 1 ACRE.
3. INLET TUBES MAY BE TEMPORARILY MOVED DURING CONSTRUCTION AS NEEDED.
4. CONSTRUCT A SMALL U-SHAPED TRENCH TO A DEPTH THAT IS 20% OF THE NON-WEIGHTED INLET TUBE DIAMETER. LAY THE INLET TUBE FLAT IN THE U-SHAPED TRENCH AND COMPACT THE UPSTREAM INLET TUBE SOIL INTERFACE.
5. INSTALL NON-WEIGHTED INLET TUBES USING WOODEN STAKES WITH A MINIMUM LENGTH OF 3 FEET AND A MINIMUM MEASURED DIMENSION OF 3/4" X 3/4" AND A MAXIMUM MEASURED DIMENSION 2" X 2", OR 1.25 POUNDS PER FOOT STEEL POSTS WITH A MINIMUM LENGTH OF 3 FEET. USE STEEL POSTS WITHOUT A SOIL PLATE AND PAINTING IS NOT REQUIRED. SPACE POSTS OR STAKES ON 2 FOOT CENTERS AND DRIVE THEM INTO THE GROUND TO A MINIMUM DEPTH OF 2 FEET. INSTALL NON-WEIGHTED INLET TUBES SO THAT THE TOP IS BELOW THE TOP OF THE INSTALLED CURB LINE TO ENSURE THAT ALL OVERFLOW OR OVERTOPPING WATER HAS THE ABILITY TO ENTER THE INLET UNOBSTRUCTED.
6. PLACE STAKES ON THE DOWNSTREAM SIDE OF THE NON-WEIGHTED INLET TUBE. REFER TO MANUFACTURER'S RECOMMENDATION FOR OTHER STAKING DETAILS.
7. AFTER ROAD BASE COURSE IS PLACED, WEIGHTED INLET TUBES SHALL BE PLACED FOR CATCH BASIN TYPES 1, 9, 12, 14, 15, 16, 17, & 18, DI 24 INCHES X 24 INCHES, DI 24 INCHES X 36 INCHES, MANHOLES, AND TRENCH DRAINS. WEIGHTED INLET TUBES ARE APPLICABLE WHERE CONSTRUCTION TRAFFIC MAY OCCUR AROUND THE INLET.
8. INSTALL WEIGHTED INLET TUBES LYING FLAT ON THE GROUND WITH NO GAPS BETWEEN THE UNDERLYING SURFACE AND THE TUBE.
9. DO NOT COMPLETELY BLOCK INLETS WITH INLET TUBES. INSTALL WEIGHTED INLET TUBES IN SUCH A MANNER THAT ALL OVERFLOW CAN ENTER THE INLET UNOBSTRUCTED. TO AVOID POSSIBLE FLOODING, 2 OR 3 CONCRETE CINDER BLOCKS MAY BE PLACED BETWEEN THE WEIGHTED INLET TUBE AND THE INLET.
10. FOR WEEP HOLE APPLICATIONS, BOTH WEIGHTED AND NON-WEIGHTED INLET TUBES ARE APPLICABLE.
11. ALL WEIGHTED TYPE F INLET STRUCTURE FILTERS ARE APPLICABLE AS TYPE E INLET STRUCTURE FILTERS.
12. REPLACE INLET TUBES DURING INSTALLATION AS DIRECTED BY THE ENGINEER, INSPECTOR, OR MANUFACTURER'S REPRESENTATIVE AT THE CONTRACTOR'S EXPENSE.
13. ALL TYPE F INLET FILTERS SHALL BE INSPECTED EVERY 7 CALENDAR DAYS.
14. THE PAY ITEMS SHALL BE:
    - 8152004 INLET STRUCTURE FILTER TYPE F (WEIGHTED)_____LF
    - 8152006 INLET STRUCTURE FILTER TYPE F (NON-WEIGHTED)_____LF
    - 8154155 CLEANING INLET STRUCTURE FILTERS_____EA

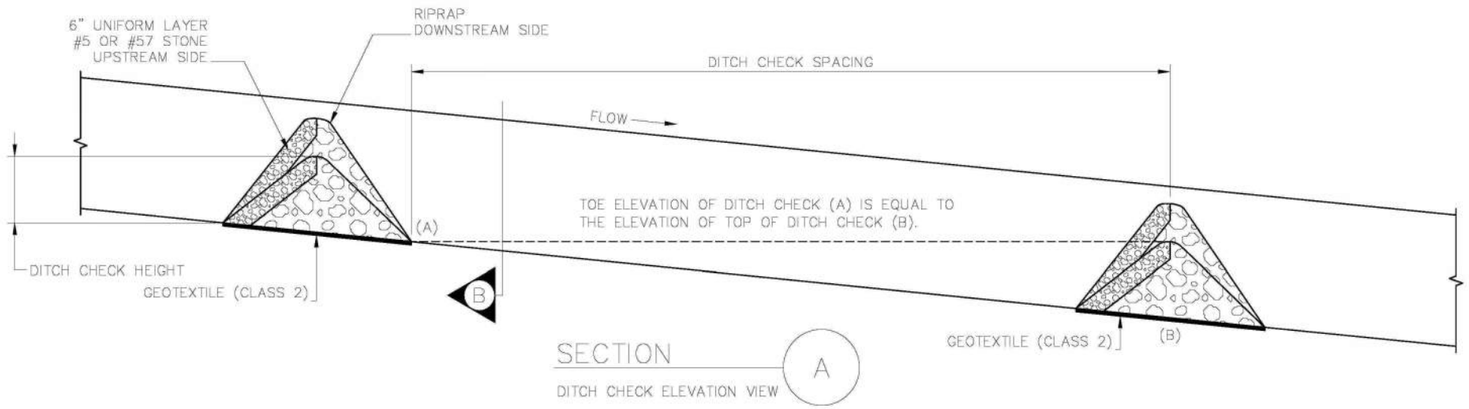
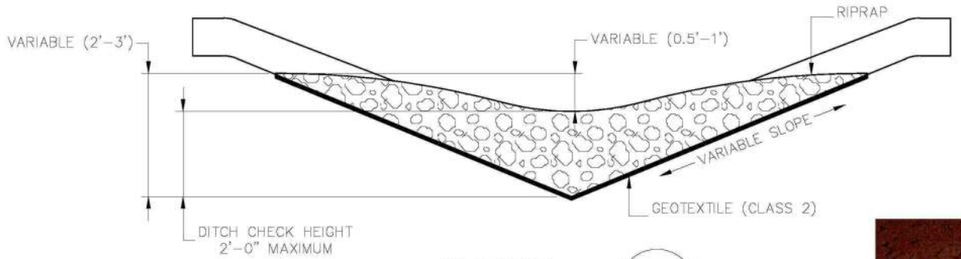
DITCH CHECK

815-105-00

EFFECTIVE LETTING DATE: JULY, 2017



DETAIL 1
DITCH CHECK ISOMETRIC VIEW



NOTES:

1. DITCH CHECK SHOULD NEVER BE USED IN LIVE STREAM.
2. DITCH CHECK IS NOT ADEQUATE FOR MORE THAN 2 ACRES OF DRAINAGE.
3. PLACE A CLASS 2 NON-WOVEN GEOTEXTILE FABRIC THAT MEETS THE REQUIREMENTS OF SECTION 804 BENEATH THE ROCK PRIOR TO INSTALLATION OF THE ROCK.
4. RIPRAP SHALL BE CLASS A.
5. RIPRAP MAY BE HAND PLACED OR MECHANICALLY PLACED AND SHAPED.
6. PLACE 6" UNIFORM LAYER OF AGGREGATE NO. 5 OR NO. 57 STONE ON THE UPSTREAM FACE OF ROCK DITCH CHECK.
7. SLOPES OF DITCH CHECK SHALL BE NO STEEPER THAN 2:1, BUT MAY BE FLATTENED DUE TO TRAFFIC SAFETY, AS DIRECTED BY THE ENGINEER.
8. HEIGHT OF DITCH CHECK SHALL BE NO MORE THAN 2.0 FEET.
9. DITCH CHECKS SHALL BE INSPECTED EVERY 7 DAYS.
10. REMOVE COLLECTED SEDIMENT IN FRONT OF DITCH CHECK AS DETERMINED BY THE ENGINEER. PAYMENT FOR REMOVAL AND DISPOSAL OF SEDIMENT WILL BE CLEANING SILT BASIN.
11. PAY ITEM SHALL BE:

8041010 RIPRAP (CLASS A)	TON
8042800 GEOTEXTILE FOR EROSION CONTROL UNDER RIPRAP (CLASS 2)	SY
8154010 CLEANING SILT BASINS	CY

NOTES:

1. SEDIMENT TUBE SHALL COMPLY WITH THE REQUIREMENTS OF SECTION 815 OF THE SCDOT STANDARD SPECIFICATION FOR HIGHWAY CONSTRUCTION (LATEST EDITION), AND MUST BE LISTED ON SCDOT QUALIFIED PRODUCT LIST NUMBER 57. SEDIMENT TUBES MUST MEET THE CRITERIA OUTLINED IN THE SUPPLEMENTAL SPECIFICATIONS BEFORE BEING LISTED ON QPL, AND BE FREE FROM DEFECTS OR TRANSPORTATION DAMAGE.

2. PROPER SITE PREPARATION IS ESSENTIAL TO ENSURE SEDIMENT TUBES ARE IN COMPLETE CONTACT WITH UNDERLYING SOIL. SEDIMENT TUBES ARE TO BE 18-24 INCHES IN DIAMETER AND ARE TO BE TRENCHED TO A DEPTH OF 20% OF TUBE DIAMETER. LAY THE SEDIMENT TUBE FLAT IN THE U-SHAPED TRENCH AND COMPACT THE UPSTREAM SEDIMENT TUBER SOIL INTERFACE. PLACE AND ANCHOR THE SEDIMENT TUBE ENDS SO THEY ARE POSITIONED UPSTREAM OF THE SEDIMENT TUBE CENTER POINT. SEDIMENT TUBES FOR DITCH CHECKS WEIGHING MORE THAN 18 POUNDS PER FOOT DO NOT REQUIRE TRENCHING.

3. SEDIMENT TUBE SHALL BE INSTALLED IMMEDIATELY AFTER GRADING AND CONSTRUCTION. SEDIMENT TUBE SHALL BE MAINTAINED DURING SUBGRADE AND BASE PREPARATION UNTIL BASE COURSE IS COMPLETE. SEDIMENT TUBES MAY BE TEMPORARILY MOVED DURING CONSTRUCTION.

4. SEDIMENT TUBES ARE TO BE INSTALLED PERPENDICULAR TO WATER FLOW AND EXTEND UP SIDE SLOPES A MINIMUM OF 1 FOOT ABOVE DESIGN FLOW DEPTH. SPACE TUBES ACCORDING TO THE FOLLOWING TABLE:

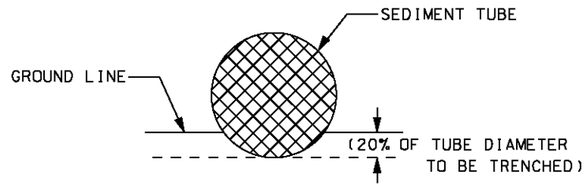
SLOPE	MAXIMUM SEDIMENT TUBE SPACING
LESS THAN 2%	150 FEET
2%	100 FEET
3%	75 FEET
4%	50 FEET
5%	40 FEET
6%	30 FEET
GREATER THAN 6%	25 FEET

5. STAKE SEDIMENT TUBES FOR DITCH CHECKS USING STAKES WITH A MINIMUM MEASURED DIMENSION OF ¾" X ¾" AND A MAXIMUM MEASURED DIMENSION OF 2" X 2", OR USING STEEL POSTS(1.25 lbs/linear foot)A MINIMUM OF 4' IN LENGTH. USE STEEL POSTS WITHOUT A SOIL PLATE AND PAINTING IS NOT REQUIRED. SPACE POSTS OR STAKES ON 2' CENTERS AND DRIVE THEM INTO THE GROUND TO A MINIMUM DEPTH OF 2'. INSTALL THE STAKES ON THE DOWNSTREAM THIRD OF THE SEDIMENT TUBE. SEDIMENT TUBES FOR DITCH CHECKS WEIGHING MORE THAN 18 POUNDS PER FOOT DO NOT REQUIRE STAKING.

6. SELECT PROPER LENGTH OF TUBE TO MINIMIZE THE NUMBER NEEDED TO SPAN THE WIDTH OF DRAINAGE AREA. ONE CONTINUOUS LENGTH IS PREFERRED COMPARED TO TWO OVERLAPPING TUBES. IF NECESSARY, SEDIMENT TUBES CAN BE LAPPED A MINIMUM OF 6 INCHES TO PREVENT PASSAGE OF FLOW AND SEDIMENT THROUGH FIELD JOINT.

7. INSTALL SEDIMENT TUBES FOR DITCH CHECKS OVER BARE SOIL, MULCHED AREAS, OR EROSION CONTROL BLANKETS. KEEP SEDIMENT TUBES FOR DITCH CHECKS IN PLACE UNTIL FULLY ESTABLISHED VEGETATION AND ROOT SYSTEMS HAVE COMPLETELY DEVELOPED AND CAN SURVIVE ON THEIR OWN.

8. INSPECT SEDIMENT TUBES AFTER INSTALLATION FOR GAPS UNDER THE SEDIMENT TUBES AND FOR GAPS BETWEEN THE JOINTS OF ADJACENT ENDS OF SEDIMENT TUBES. INSPECT SEDIMENT TUBES EVERY 7 DAYS. REPAIR ALL RILLS, GULLIES, AND UNDERCUTTING NEAR SEDIMENT TUBES. REMOVE ALL SEDIMENT DEPOSITS THAT IMPAIR THE FILTRATION CAPABILITY OF SEDIMENT TUBES WHEN THE SEDIMENT REACHES 1/3 THE HEIGHT OF THE EXPOSED SEDIMENT TUBE.



9. REMOVE AND/OR REPLACE INSTALLED SEDIMENT TUBES AS REQUIRED TO ADAPT TO CHANGING CONSTRUCTION SITE CONDITIONS. REMOVE SEDIMENT TUBES WHEN THE FUNCTIONAL LONGEVITY IS EXCEEDED AS DETERMINED BY THE ENGINEER, INSPECTOR, OR MANUFACTURER'S REPRESENTATIVE. GATHER SEDIMENT TUBES AND DISPOSE OF THEM IN REGULAR MEANS AS NON-HAZARDOUS, INERT MATERIAL.

10. PRIOR TO FINAL STABILIZATION, BACKFILL ALL TRENCHES, DEPRESSIONS, AND OTHER GROUND DISTURBANCES CAUSED BY THE REMOVAL OF SEDIMENT TUBES.

11. CLEAN OUT OF TUBES WILL BE PAID FOR AS CLEANING SILT BASINS.

12. PAYMENT SHALL INCLUDE ALL MATERIALS, LABOR, TOOLS, EQUIPMENT, MAINTENANCE, AND INCIDENTALS NECESSARY TO COMPLETE WORK.

13. THE PAY ITEMS SHALL BE:
8152007 SEDIMENT TUBE ..... LF
8154010 CLEANING SILT BASINS ..... CY

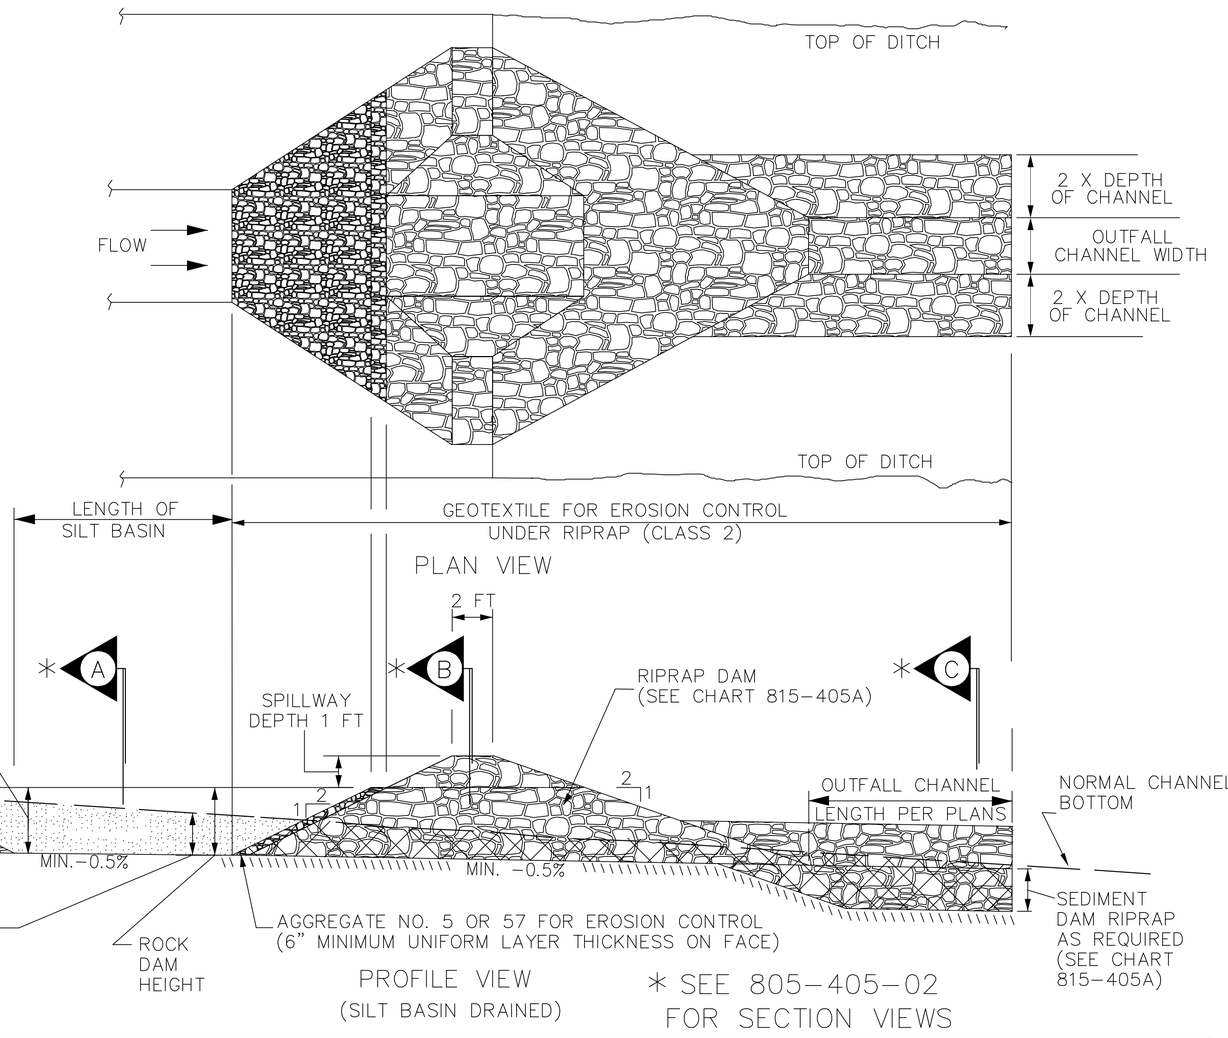
STANDARD DRAWING SEDIMENT DAM

815-405-01



EFFECTIVE LETTING DATE | JULY 2017

NOTES:

1. SEDIMENT DAMS WILL BE DESIGNED IN ACCORDANCE WITH THE SCDOT WATER QUALITY MANUAL.
2. SILT BASIN MUST BE CLEANED OUT WHEN SEDIMENT STORAGE VOLUME IS HALF FULL. CLEAN OUT OF SILT BASIN WILL BE PAID FOR AS THE ITEM OF CLEANING SILT BASINS.
3. THE GRADATION CLASS OF SEDIMENT DAM RIPRAP WILL BE CLASS A FOR WATERSHEDS LESS THAN 3 ACRES.
4. THE GRADATION CLASS OF SEDIMENT DAM RIPRAP WILL BE CLASS B FOR WATERSHEDS 3 ACRES OR GREATER.
5. CONSTRUCTION OF SEDIMENT DAM RIPRAP WILL INCLUDE REMOVAL AND DISPOSAL OF RIPRAP.
6. ALL EARTHEN AREAS OF THE SILT BASIN WILL BE TEMPORARILY SEEDED EXCEPT FOR THE BOTTOM OF THE BASIN.
7. CROSS-HATCHED AREA, IF NECESSARY TO BE REMOVED FOR SEDIMENT DAM RIPRAP, WILL BE PAID FOR AS UNCLASSIFIED EXCAVATION.
8. USE CLASS 2 GEOTEXTILE FOR EROSION CONTROL UNDER RIPRAP.
9. SEE DRAWING # 815-405-02 FOR VIEWS OF SECTIONS A, B, AND C.
10. THE PAY ITEMS SHALL BE:

2031000	UNCLASSIFIED EXCAVATION	CY
8041010	RIPRAP (CLASS A)	TON
8041020	RIPRAP (CLASS B)	TON
8042800	GEOTEXTILE FOR EROSION CONTROL UNDER RIPRAP (CLASS 2)	SY

STANDARD DRAWING

STABILIZED CONSTRUCTION ENTRANCE

815-505-00

EFFECTIVE LETTING DATE: JUL 2017

THIS DRAWING IS NOT TO SCALE

NOTES:

1. STABILIZED CONSTRUCTION ENTRANCES SHOULD BE USED AT ALL POINTS WHERE TRAFFIC WILL BE LEAVING A CONSTRUCTION SITE AND MOVING DIRECTLY ONTO A PUBLIC ROAD.

2. IF WASHING IS USED, PROVISIONS MUST BE MADE TO INTERCEPT THE WASH WATER AND TRAP THE SEDIMENT BEFORE IT IS CARRIED OFF SITE. WASHDOWN FACILITIES SHALL BE REQUIRED AS DIRECTED BY SCDOT AS NEEDED. WASHDOWN AREAS IN GENERAL MUST BE ESTABLISHED WITH CRUSHED GRAVEL AND DRAIN INTO A SEDIMENT TRAP OR SEDIMENT BASIN. CONSTRUCTION ENTRANCES SHOULD BE USED IN CONJUNCTION WITH THE STABILIZATION OF CONSTRUCTION ROADS TO REDUCE THE AMOUNT OF MUD PICKED UP BY VEHICLES.

3. REMOVE ALL VEGETATION AND ANY OBJECTIONABLE MATERIAL FROM THE FOUNDATION AREA.

4. DIVERT ALL SURFACE RUNOFF AND DRAINAGE FROM STONES TO A SEDIMENT TRAP OR BASIN.

5. INSTALL A CLASS 2 NON-WOVEN GEOTEXTILE FABRIC THAT MEETS THE REQUIREMENTS OF SECTION 804 OF THE STANDARD SPECIFICATIONS FOR HIGHWAY CONSTRUCTION, LATEST EDITION, PRIOR TO PLACING ANY STONE.

6. MINIMUM DIMENSIONS OF THE ENTRANCE SHALL BE 24-FT WIDE x 100-FT LONG, AND MAY BE MODIFIED AS NECESSARY TO ACCOMMODATE SITE CONSTRAINTS.

7. INSPECT CONSTRUCTION ENTRANCES EVERY SEVEN (7) CALENDAR DAYS. CHECK FOR MUD AND SEDIMENT BUILDUP, AS WELL AS PAD INTEGRITY. MAINTENANCE IS REQUIRED MORE FREQUENTLY IN WET WEATHER CONDITIONS. RESHAPE THE STONE PAD AS NEEDED FOR DRAINAGE AND RUNOFF CONTROL.

8. WASH OR REPLACE STONES AS NEEDED AND AS DIRECTED BY THE ENGINEER. THE STONE IN THE ENTRANCE SHOULD BE WASHED OR REPLACED WHENEVER THE ENTRANCE FAILS TO REDUCE MUD BEING CARRIED OFF SITE BY VEHICLES. FREQUENT WASHING WILL EXTEND THE USEFUL LIFE OF STONE.

9. IMMEDIATELY REMOVE MUD AND SEDIMENT TRACKED OR WASHED ONTO PUBLIC ROADS BY BRUSHING OR SWEEPING. FLUSHING SHOULD ONLY BE USED WHEN THE WATER CAN BE DISCHARGED TO A SEDIMENT TRAP OR BASIN.

10. REPAIR ANY BROKEN PAVEMENT IMMEDIATELY.

11. USE AGGREGATE No. 1, 2, 24, OR 3 AS CONSTRUCTION ENTRANCE MATERIAL.

12. PAY ITEM:
8156490 STABILIZED CONSTRUCTION ENTRANCE_____SY

TABLE 815-605A				
HEIGHT OF FILL (y) IN FEET	FILL SLOPE	MINIMUM SILT FENCE OFFSET FROM TOE OF SLOPE (x) IN FEET	MINIMUM RIGHT OF WAY OFFSET FROM TOE OF SLOPE (NPDES LINE) (z) IN FEET	CHECK LENGTH IN FEET**
<6	2:1 4:1 6:1	2	3	2
6–10	2:1	12*	13*	5
	4:1 6:1	3	4	3
>10	2:1	12*	13*	5
	4:1 6:1	4	5	4

*THESE MINIMUM OFFSETS MAY BE REDUCED WHEN CURB AND GUTTER OR SOME OTHER FEATURE REDUCES THE FLOW OF WATER DOWN THE SLOPE. THE SMALL OFFSETS OF EACH GROUP OF HEIGHT OF FILL CANNOT BE REDUCED.

**SILT FENCE CHECKS WILL HAVE A MAXIMUM LENGTH OF FIVE (5) FEET OR UNTIL THEY TIE BACK INTO THE SLOPE.

SEE 815-605-10 FOR TEMPORARY DIVERSION DIKE

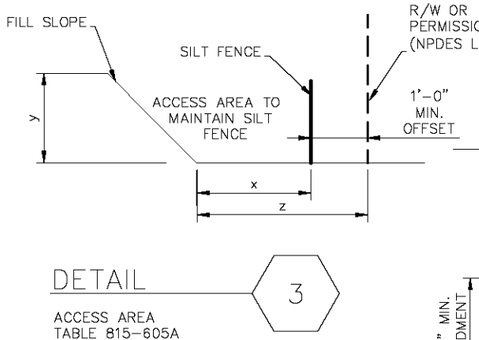
SEE 815-605-20 FOR TEMPORARY SILT DITCH

SEE 815-605-30 FOR ROLLED EROSION CONTROL PRODUCT

NOTES:
1. SILT FENCE CHECKS MUST BE LOCATED EVERY 100 FEET MAXIMUM AND AT LOW POINTS. FILTER FABRICS SHALL CONFORM TO SCDOT STANDARD SPECIFICATIONS FOR HIGHWAY CONSTRUCTION (LATEST EDITION).

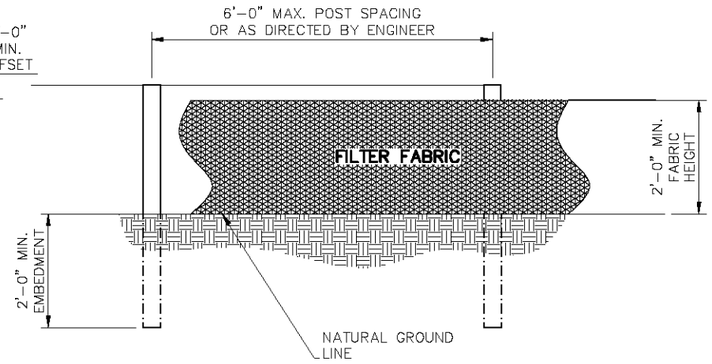
2. USE POSTS CONFORMING TO SCDOT STANDARD SPECIFICATIONS AND SPECIAL PROVISIONS. POSTS SHALL BE A MINIMUM OF 5 FEET LONG AND INSTALLED TO A MINIMUM DEPTH OF 24 INCHES WITH NO MORE THAN 3 FEET OF THE POST ABOVE GROUND. AT LEAST 1 TO 2 INCHES OF THE POSTS SHALL EXTEND ABOVE THE TOP OF THE FABRIC. POST SPACING WILL BE A MAXIMUM OF 6 FEET ON CENTER .

3. POSTS SHALL HAVE PROJECTIONS FOR FASTENING THE FABRIC TO THE POST. POSTS SHALL ALSO HAVE A SOIL PLATE NEAR THE BOTTOM OF THE POST, EXCEPT WHEN HEAVY CLAY SOILS ARE PRESENT ON-SITE.



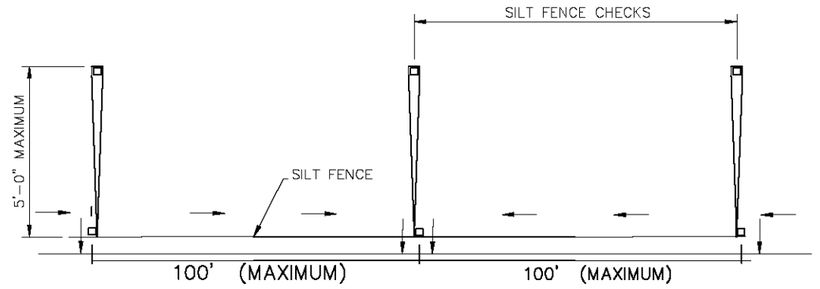
4. ATTACH FABRIC TO POSTS USING HEAVY-DUTY PLASTIC TIES THAT ARE EVENLY SPACED AND PLACED IN A MANNER TO PREVENT SAGGING OR TEARING OF THE FABRIC. IN ALL CASES TIES SHOULD BE AFFIXED IN NO LESS THAN 4 PLACES.

5. SILT SHALL BE REMOVED AND DISPOSED OF WHEN SILT ACCUMULATES TO ⅓ THE HEIGHT OF THE FENCE. TRAPPED SEDIMENT SHALL BE REMOVED OR STABILIZED ON-SITE. MAINTENANCE OF SILT FENCE WILL BE MEASURED AND PAID FOR BY THE ITEM OF REMOVAL OF SILT RETAINED BY SILT FENCE.



6. TYPICAL SILT FENCE APPLICATIONS REQUIRE 24 INCHES OF THE FABRIC TO BE ABOVE GROUND. WHEN NEEDED, THE HEIGHT OF SILT FENCE FABRIC ABOVE THE GROUND MAY BE GREATER THAN 24". SEE PLANS FOR APPLICATION OF HIGHER SILT FENCE, PAY ITEMS, AND INSTALLATION METHODS.

7. IN TIDAL AREAS, EXTRA SILT FENCE MAY BE REQUIRED. THE LENGTH OF POST WILL BE TWICE THE EXPOSED POST HEIGHT. POST SPACING WILL REMAIN AS SHOWN HEREON. EXTRA HEIGHT FABRIC WILL BE 4, 5, OR 6 FEET TOTAL WIDTH.



8. PAY ITEMS:
8153000 SILT FENCE _____ LF
8153005 SILT FENCE EXTRA HEIGHT _____ LF
8153090 REPLACE/REPAIR SILT FENCE _____ LF
8154050 REMOVAL OF SILT RETAINED BY SILT FENCE _____ LF

STANDARD DRAWING SEDIMENT DAM FOR PIPE INLET

815-406-00

EFFECTIVE LETTING DATE | JULY 2017

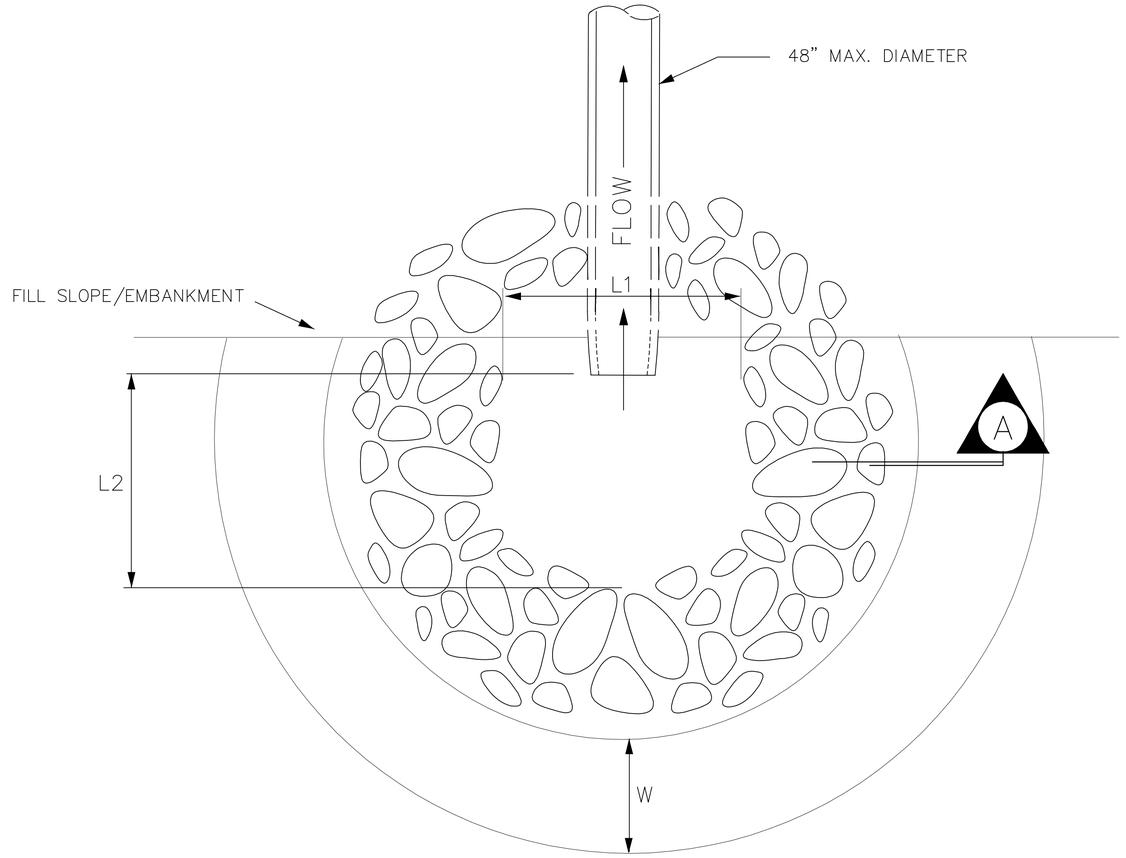
NOTES:

1. SEDIMENT DAM FOR PIPE INLET WILL BE DESIGNED IN ACCORDANCE WITH THE SCDOT WATER QUALITY MANUAL.

2. SILT BASIN MUST BE CLEANED OUT WHEN SEDIMENT STORAGE VOLUME IS HALF FULL. CLEAN OUT OF SILT BASIN WILL BE PAID FOR AS THE ITEM OF CLEANING SILT BASINS.

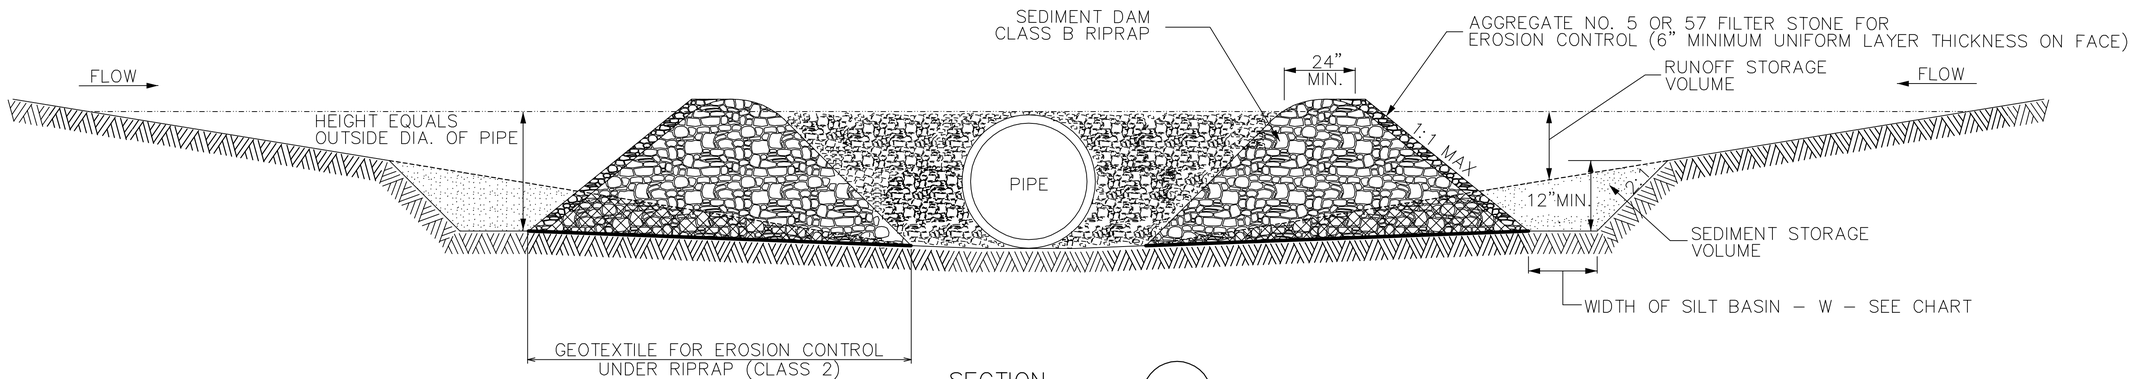
3. CONSTRUCTION OF SEDIMENT DAM RIPRAP WILL INCLUDE REMOVAL AND DISPOSAL OF RIPRAP.

4. ALL EARTHEN AREAS OF THE SILT BASIN WILL BE TEMPORARILY SEEDED EXCEPT FOR THE BOTTOM OF THE BASIN.



5. CROSS-HATCHED AREA, IF NECESSARY TO BE REMOVED FOR SEDIMENT DAM RIPRAP, WILL BE PAID FOR AS UNCLASSIFIED EXCAVATION.

6. USE CLASS 2 GEOTEXTILE FOR EROSION CONTROL UNDER RIPRAP.



7. THE PAY ITEMS SHALL BE:

2031000	UNCLASSIFIED EXCAVATION	CY
8041020	RIPRAP (CLASS B)	TON

Introduction

STV Incorporated entered into an agreement with York County to provide professional engineering services for the proposed roadway widening of US 21 and SC 51 from SC 460 (Springfield Parkway) to 700 feet south of S-48 (Springhill Farm Road) (See Figure 1: Project Location Map). The project consists of widening the roadways from a 2 lane typical section to a 5 lane typical section with shoulder and ditches and a 5 lane section with curb and gutter. The studied area includes approximately 2.82 miles of US 21 and 0.84 miles of SC 51. This area also includes all applicable watershed areas that drain to the roadway. The project's total area of land disturbance is 52.6 acres. In accordance with guidance in SCDOT Water Quality Design Memorandum WQDM-02, the project area is computed as 55.6 acres.

This report contains drainage calculations and summary tables for hydrology, culvert hydraulics, open channel and closed system hydraulics, pre- versus post-construction discharge, and erosion control. The purpose of this report is to document the design procedures that were used to analyze the hydrology and hydraulics of the proposed roadway improvements.

Site Description

US 21 and SC 51 are existing roadways located in York County, South Carolina, within the town of Fort Mill (Figure 1). The project area is in rolling terrain, ranging in elevation from about 583 feet to 671 feet above sea level. The soils consist of loamy sands and clay loam. These soils vary between well drained and poorly drained; however they are mostly well drained (see Table 1 for general soils information and end of narrative section for Soils Map). These characteristics are common in this area of South Carolina.

TMDL/303d Impaired Waterbodies

The nearest Water Quality Monitoring Station, CW-203, for all project outfalls is located on Steele Creek at S-46-98 in York County. CW-203 is listed on the current SC DHEC 2017 list of approved TMDLs, for fecal coliform bacteria (FC). Site storm water runoff from the project is not anticipated to be a source for further FC impairment.

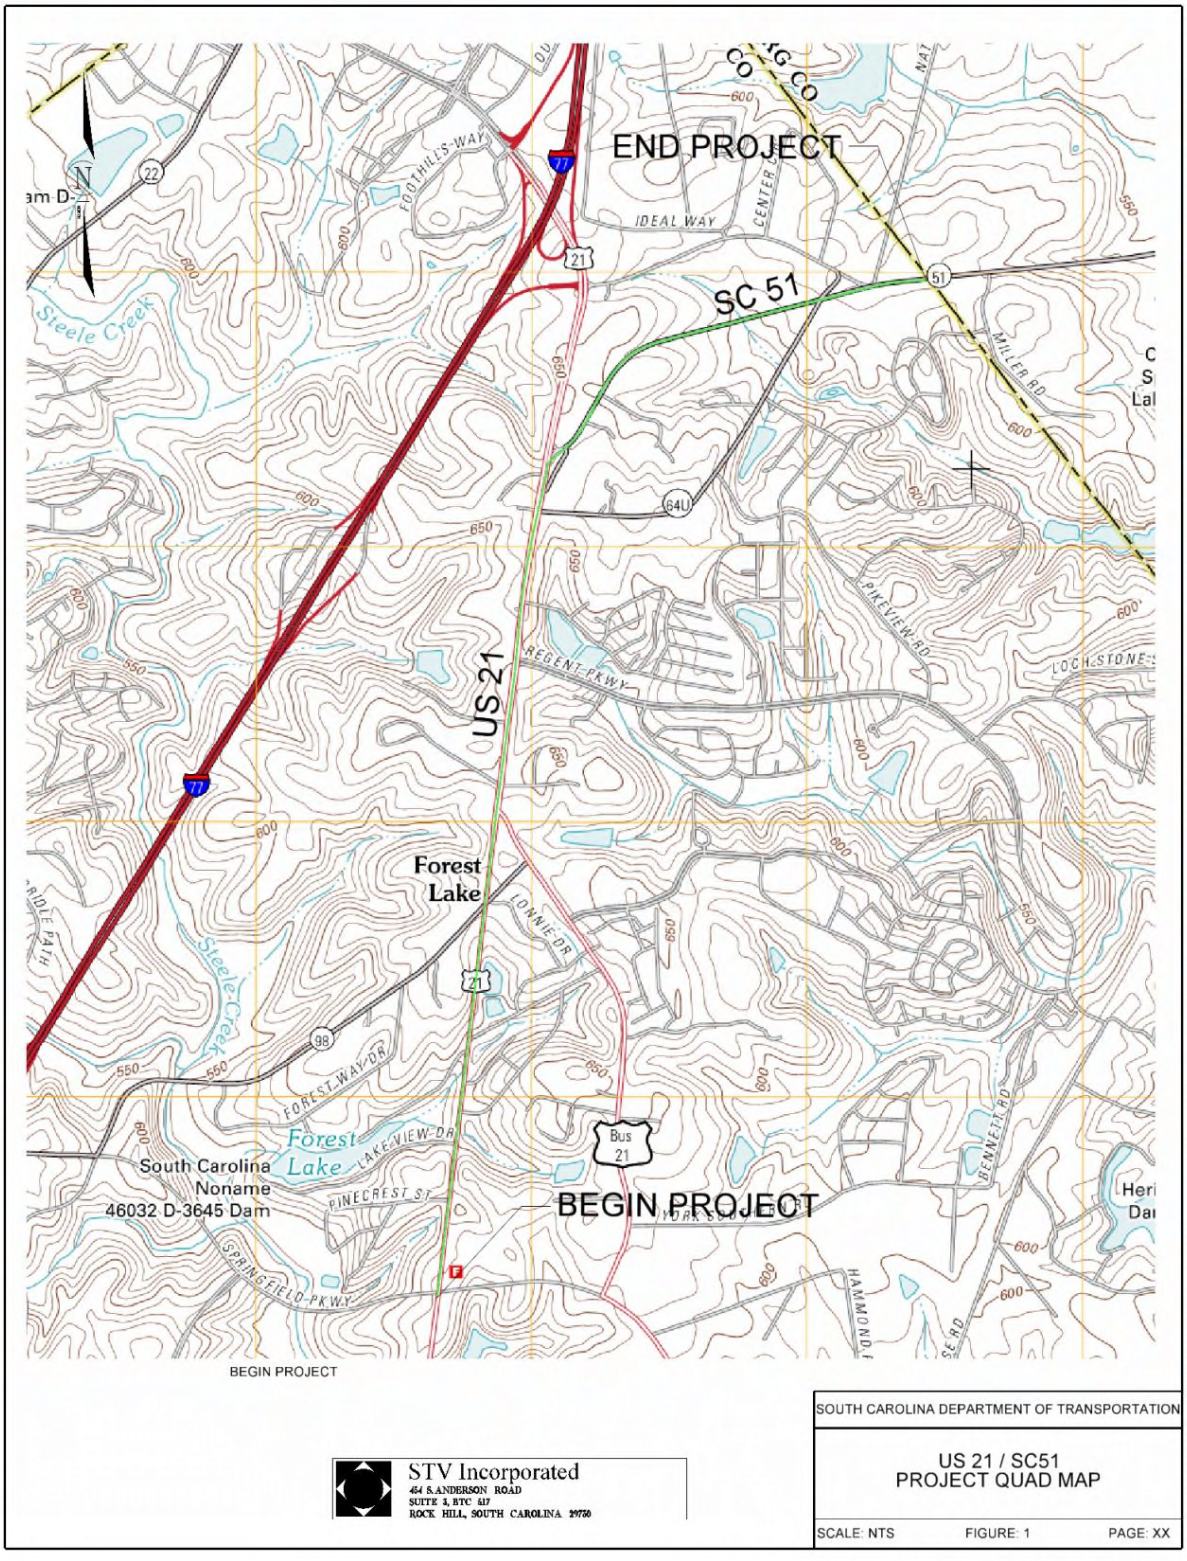

Figure 1: Project Location Map

Map Symbol	Soil Name	Description	Drainage	Hydrologic Soil Group
ArA	Armenia loam, 0 to 2 percent slopes	*Depth to restrictive feature:* More than 80 inches *Depth to water table:* 6-18 inches (apparent) *Frequency of ponding:* None *Available water storage:* Moderate (~6.5 inches)	Poorly drained	D
BbA	Brewback fine sandy loam, 0 to 2 percent slopes	*Depth to restrictive feature:* 36 inches *Depth to water table:* About 6 - 40 inches (perched) *Frequency of ponding:* None *Available water storage:* Low (~4.2 inches)	Somewhat poorly drained	D
BbB	Brewback fine sandy loam, 2 to 6 percent slopes	*Depth to restrictive feature:* 36 inches *Depth to water table:* About 6 - 40 inches (perched) *Frequency of ponding:* None *Available water storage:* Low (~4.2 inches)	Somewhat poorly drained	D
CeB2	Cecil sandy clay loam, 2 to 6 percent slopes	*Depth to restrictive feature:* More than 80 inches *Depth to water table:* N/A *Frequency of ponding:* None *Available water storage:* High (~9.3 inches)	Well drained	B
CeC2	Cecil sandy clay loam, 6 to 10 percent slopes	*Depth to restrictive feature:* More than 80 inches *Depth to water table:* N/A *Frequency of ponding:* None *Available water storage:* Moderate (~8.4 inches)	Well drained	B
CfB3	Cecil clay loam, 2 to 6 percent slopes	*Depth to restrictive feature:* More than 80 inches *Depth to water table:* N/A *Frequency of ponding:* None *Available water storage:* Moderate (~8.8 inches)	Well drained	B
CfC3	Cecil clay loam, 6 to 10 percent slopes	*Depth to restrictive feature:* More than 80 inches *Depth to water table:* N/A *Frequency of ponding:* None *Available water storage:* Moderate (~8.8 inches)	Well drained	B
ChA	Chewacla loam. 0 to 2 percent slopes	*Depth to restrictive feature:* More than 80 inches *Depth to water table:* About 6 - 72 inches *Frequency of ponding:* None *Available water storage:* High (~10.8 inches)	Somewhat poorly drained	B/D
MeB2	Mecklenburg-Wynott complex, 2 to 6 percent slopes	*Depth to restrictive feature:* More than 80 inches *Depth to water table:* N/A *Frequency of ponding:* None *Available water storage:* Moderate (~7.6 inches)	Well drained	C
MkB3	Mecklenburg-Wynott complex, 2 to 6 percent slopes	*Depth to restrictive feature:* More than 80 inches *Depth to water table:* N/A *Frequency of ponding:* None *Available water storage:* Moderate (~8.3 inches)	Well drained	C
MkC3	Mecklenburg-Wynott complex, 2 to 6 percent slopes	*Depth to restrictive feature:* More than 80 inches *Depth to water table:* N/A *Frequency of ponding:* None *Available water storage:* Moderate (~8.3 inches)	Well drained	C
PaD2	Pacolet sandy clay loam, 10 to 15 persent slopes	*Depth to restrictive feature:* More than 80 inches *Depth to water table:* N/A *Frequency of ponding:* None *Available water storage:* Moderate (~8.2 inches)	Well drained	B
PcE3	Pacolet clay loam, 15 to 25 percent slopes	*Depth to restrictive feature:* More than 80 inches *Depth to water table:* N/A *Frequency of ponding:* None *Available water storage:* Moderate (~7.1 inches)	Well drained	B

Calculations Methodology

Hydrology

Design Criteria

In accordance with the SCDOT's "Requirements for Hydraulic Design Studies" dated May 26, 2009, the following design criteria were used (see Appendices A, B, and C for calculations):

1) Roadside Ditches and Outfalls
   a) 10-year peak discharge for drainage areas from 0 to 40 acres.
   b) 25-year peak discharge for drainage areas from 40 to 500 acres.
   c) 50-year peak discharge for drainage areas greater than 500 acres.
2) Culverts
   a) 50-year peak discharge for primary road and interstate routes.
   b) 25-year peak discharge for secondary roads.
   c) 10-year peak discharge for driveway pipes.

Methodology

The rational method was used to calculate peak discharges for all drainage systems with drainage areas up to 100 acres. A spreadsheet is used to calculate Q. The Rational formula is as follows:

$$Q = C \cdot I \cdot DA \cdot C_f$$

Where: Q = discharge in cubic feet per second (cfs)
C = the runoff coefficient
I = the rainfall intensity in inches per hour (in/hr)
DA = Drainage Area (ac), and where
C_f, Runoff Factor, is defined by:

Recurrence Interval, Years	Return Period, % annual chance	Runoff Factor, C_f
2 – 10	50-10	1.0
25	4	1.1
50	2	1.2
100	1	1.25

Runoff Coefficient (C)

Runoff coefficients were determined from a visual inspection of the project area and the following table from SCDOT's "Requirements for Hydraulic Design Studies" dated May 26, 2009.

RUNOFF FACTORS FOR RATIONAL METHOD			
Land cover type	**Flat**	**Rolling**	**Hilly**
	0% - 2%	**2% - 10%**	**Over 10%**
Pavements & Roofs	0.90	0.90	0.90
Earth shoulders	0.50	0.50	0.50
Drives & Walks	0.75	0.80	0.85
Gravel Pavements	0.50	0.55	0.60
City Business Areas	0.80	0.85	0.85
Unpaved Road, Sandy Soils	0.34	0.45	0.59
Unpaved Road, Silty Soils	0.35	0.47	0.61
Unpaved Road, Clay Soils	0.40	0.53	0.69
Apartment Dwelling Areas	0.50	0.60	0.70
Suburban, Normal Residential	0.45	0.50	0.55
Dense Residential Sections	0.60	0.65	0.70
Lawns, Sandy Soils	0.10	0.15	0.20
Lawns, Heavy Soils	0.17	0.22	0.35
Grass Shoulders	0.25	0.25	0.25
Side Slopes, Earth	0.60	0.60	0.60
Side Slopes, Turf	0.30	0.30	0.30
Median Areas, Turf	0.25	0.30	0.30
Cultivated Land, Clay & Loam	0.50	0.55	0.60
Cultivated Land, Sand & Gravel	0.25	0.30	0.35
Industrial Areas, Light	0.50	0.70	0.80
Industrial Areas, Heavy	0.60	0.80	0.90
Parks & Cemeteries	0.10	0.15	0.25
Playgrounds	0.20	0.25	0.30
Woodland & Forest	0.10	0.15	0.20
Meadows & Pasture Land	0.25	0.30	0.35
Unimproved Areas	0.10	0.20	0.30
Rail Yards	0.25	0.30	NA
Expressways & Freeways*	0.60*	0.70*	0.75*
* The designer can also calculate weighted 'C' values for expressways and freeways using the values in the table for pavement, side slopes and planted medians. Revised 3/16/09			

Table 2: Runoff Coefficients for Rational Formula

Time of Concentration (Tc)

Time of Concentration is calculated using a spreadsheet based on the TR-55 method. All Tc values were derived from the existing conditions from digital mapping, field survey, and USGS topographic maps (see Appendices A, B, and C for calculations).

Rainfall intensity (I)

Rainfall intensities were determined using the following equation and the values indicated in the Rainfall Intensity Values charts provided by SCDOT at the time the project design phase was started.

$$i = \frac{a}{(b + t_c)^c}$$

The coefficients for Rock Hill, South Carolina for the 2-, 5-, 10-, 25-, 50-, and 100-year rainfalls are given in the table below as well as the intensity values for the 5-, 10-, and 15-minute times of concentration.

Rock Hill, South Carolina							
Frequency		a	b	c	i (t_c = 5)	i (t_c = 10)	i (t_c = 15)
% annual chance	*x*-year						
50	2	240.26568	35.61513	1.03559	5.19	4.60	4.13
20	5	254.71848	33.33552	1.02140	6.15	5.42	4.85
10	10	264.71357	31.82192	1.01175	6.89	6.06	5.40
4	25	276.98802	30.00177	1.00001	7.91	6.92	6.15
2	50	286.34575	28.61559	0.99107	8.80	7.66	6.79
1	100	294.57238	27.37215	0.98314	9.65	8.38	7.41

Table 3: Rainfall Intensities for Rock Hill, SC

Drainage Area (DA)

Drainage areas for ditches, and culverts were delineated with "Microstation V8i" utilizing field survey, USGS topographic maps, digital mapping, and field observation (see Figures 7a, 7b, 8a and 8b for Drainage Area Maps).

NRCS Win TR-55 Method

The Win TR-55 method is used to calculate peak discharges for all drainage areas from 100 acres up to 640 acres.

Open Channel Hydraulics

Design Criteria

1) Minimum Ditch Grade should be 0.30%.
2) Maximum Shear Stress allowable will be 1.00 lbs/ft^2 for Class 'C' vegetation.
3) Minimum ditch depth should be 1.0' below the sub-grade of the roadway.
4) No modifications will be made to natural channels unless to prevent scour and erosion.

Methodology

An in-house spreadsheet using the formulas and procedure from HEC-15 (FHWA-IP-87-7, April 1988), "Design of Roadside Channels with Flexible Linings", and the FHWA Hydraulic Toolbox were used to analyze proposed ditch sections and outfalls. The ditches were analyzed for shear stress and adequate ditch depth. Where ditch section analysis indicated instability due to shear stress, a permanent erosion control mat or riprap lining was proposed to stabilize the ditch (see Appendix A for ditch calculations). Shear stress is calculated using the formula:

$$\tau = \gamma dS$$

Where: τ = shear stress (lb/ft^2)
γ = unit weight of water (62.4 lb/ft^3)

D = flow depth (ft)
S = Channel gradient (ft/ft)

Storm Drain Systems Hydraulics

Design Criteria

1) Inlet Spacing (see Appendix E for inlet capacity calculations and spacing data)
   a) Design spread not to exceed or the shoulder width.
   b) Maximum spacing is 400'.
   c) Minimum spacing is typically 150'. However, due to flat longitudinal slopes and the need for yard inlets, spacing less than 150' will be required in some locations.
2) Pipes (see Appendix E for Geopak Calculations)
3) Minimum pipe slope should be 0.30%. A pipe slope of 0.10% to 0.2% was used when the minimum could not be achieved due to depth constraints.
   a) Minimum velocity for design discharge should be 3.0 fps.
   b) Minimum diameter should be 18", (15" for yard drains).
   c) Minimum cover should be 1.5', (0.5' for yard drains). Minimum cover was reduced where there was a depth constraint.
   d) Design flow depths should not exceed 0.94 times the pipe diameter. Flow depth was exceeded where there was a depth constraint.

Methodology

The SCDOT's "Inlet Spacing Charts" were used to determine the maximum allowable drainage area for each Type 16 catch basins. An inlet capacity spreadsheet was used to calculate spread for Type 1 catch basins. The median drainage was spaced for future widening using an inlet capacity spreadsheet based on HEC 12. (See Appendix E for inlet capacity calculations and spacing data).

The computer program Geopak Drainage was used to analyze and determine pipe sizes for closed systems. The SCDOT's "Specification Support Manual for Geopak Drainage", October 1, 2002, was used as a guide to set the program's internal design preferences and drainage library. (See Appendix E for storm pipe and hydraulic grade line computations).

Culvert Hydraulics

Design Criteria

1) Prevent potential damage to upstream property.
2) Headwater should be 1.0' below the subgrade of roadway.
3) Meet FEMA floodway or flood hazard requirements where applicable.
4) Design headwater should be limited to 1.2 times the height of the culvert.

Methodology

The FHWA computer program "HY-8" version 7.3 was used to perform the hydraulic analysis for the project culvert crossings. See Appendix B for culvert data summary and "HY-8" results. Outfall channels were also analyzed for the culvert design storm using the "HY8" uniform flow rating curve.

Pre vs. Post Analysis

Design Criteria

Pre and post development peak discharge rates were calculated for each outfall for the 2- and 10-year storm events. If post development discharges increased and/or if significant downstream impacts were anticipated, then the appropriate storm water management practice will be designed.

For this project, the change from a rural typical section to a curb and gutter typical section resulted in point discharges onto undeveloped property and into existing outfall ditches, where the existing discharge from the road is sheet flow. Downstream conditions were explored in the field and we do not anticipate adverse impacts from the new project outfalls. Figures 8a and 8b provide a complete depiction of pre and post development drainage areas. Discharge calculations can be found in Appendix C.

As a result of discussions with York County, roadway storm drainage was designed to reduce post development discharges below pre-development levels at receiving channels that drain to Forest Lake, the man-made pond that is a feature of the Forest Lake neighborhood. This was done in response to information contained in correspondence from SCDOT and from the Forest Lake Neighborhood Association, copies of which is provided in Appendix C

Methodology

The rational method was used to generate pre and post development peak discharges for all drainage areas less than 100 acres. The project outfalls were hydraulically analyzed to determine downstream impacts. See Appendix C for Pre versus Post construction discharge calculations. Based on these calculations, this project will not pose any adverse impacts to the downstream receiving water body and/or properties and will not require detention practices.

Sediment and Erosion Control

Design Criteria

The sediment and erosion control structures for this project consist of sediment dams, sediment dam for pipe inlet, silt fence, ditch checks/sediment tubes, erosion control blankets, permanent turf reinforcement matting and outlet protection. See Appendix D for detailed data and calculations. All projects that have one or more acres of disturbed area will be designed for sediment and erosion control in accordance with DHEC's General Permit and State Erosion Control regulations. All stormwater from the construction site should be treated before it is released.

Methodology

1) *Sediment Dams* (SCDOT Standard Drawing No. 815-405-01 and 815-405-02.) will be placed at the outfall locations as shown on the plans and are used to remove sediment from construction runoff where the total drainage area is less than 10 acres. Sediment dams will be designed in accordance with the SCDOT's "Stormwater Quality Design Manual."
2) *Sediment Dam for Pipe Inlet* (SCDOT Stand Drawing No. 815-406-00) will be placed at pipe inlet as shown on the plans and are used to remove sediment from construction runoff where the total disturbed area in less than 2 acres. Sediment dams for Pipe Inlet will be designed in accordance with the SCDOT's "Stormwater Quality Design Manual."

3) *Silt Fence* (SCDOT Standard Drawing No. 815-605-00) will be placed along the perimeter of the disturbed area where runoff is in sheet flow or concentrated flow less than 0.5 cfs. Silt Fence will act as a sediment filter by retarding flow and promoting deposition.
4) *Ditch Checks* (SCDOT Standard Drawing No. 815-105-00) or 20" Sediment Tubes (SCDOT Standard Drawing No. 815-205-00) will be placed in the roadside ditches and are intended to reduce erosion in the channel by restricting the velocity. The check dams will be placed so that the downstream toe of one check dam is level with the top of the next one downstream.
5) *Erosion Control Blankets and/or Turf Reinforcement Mats* (SCDOT Standard Drawing No. 815-6 05-00) will be placed in ditches as called out on the Erosion Control Data Sheet and on some 2:1 slopes. These rolled erosion control products will protect the exposed soil from the forces of raindrop impact and overland flow, and will promote growth of vegetation.
6) *Outlet Protection riprap aprons* will be placed at the outlet end of the cross culverts to protect the receiving channel from scour by reducing the discharge velocity and dissipating the energy.

Sediment and erosion control devices should be inspected weekly and after each storm event. Any damage to devices should be repaired immediately, and any silt accumulated should be removed. All disturbed areas should be covered with temporary or permanent vegetation as soon as practical. All devices should be properly maintained during all phases of construction and be removed once the area has been stabilized.

Custom Soil Resource Report for Mecklenburg County, North Carolina, and York County, South Carolina

US 21 & SC 51

August 18, 2016

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (http://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means

for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

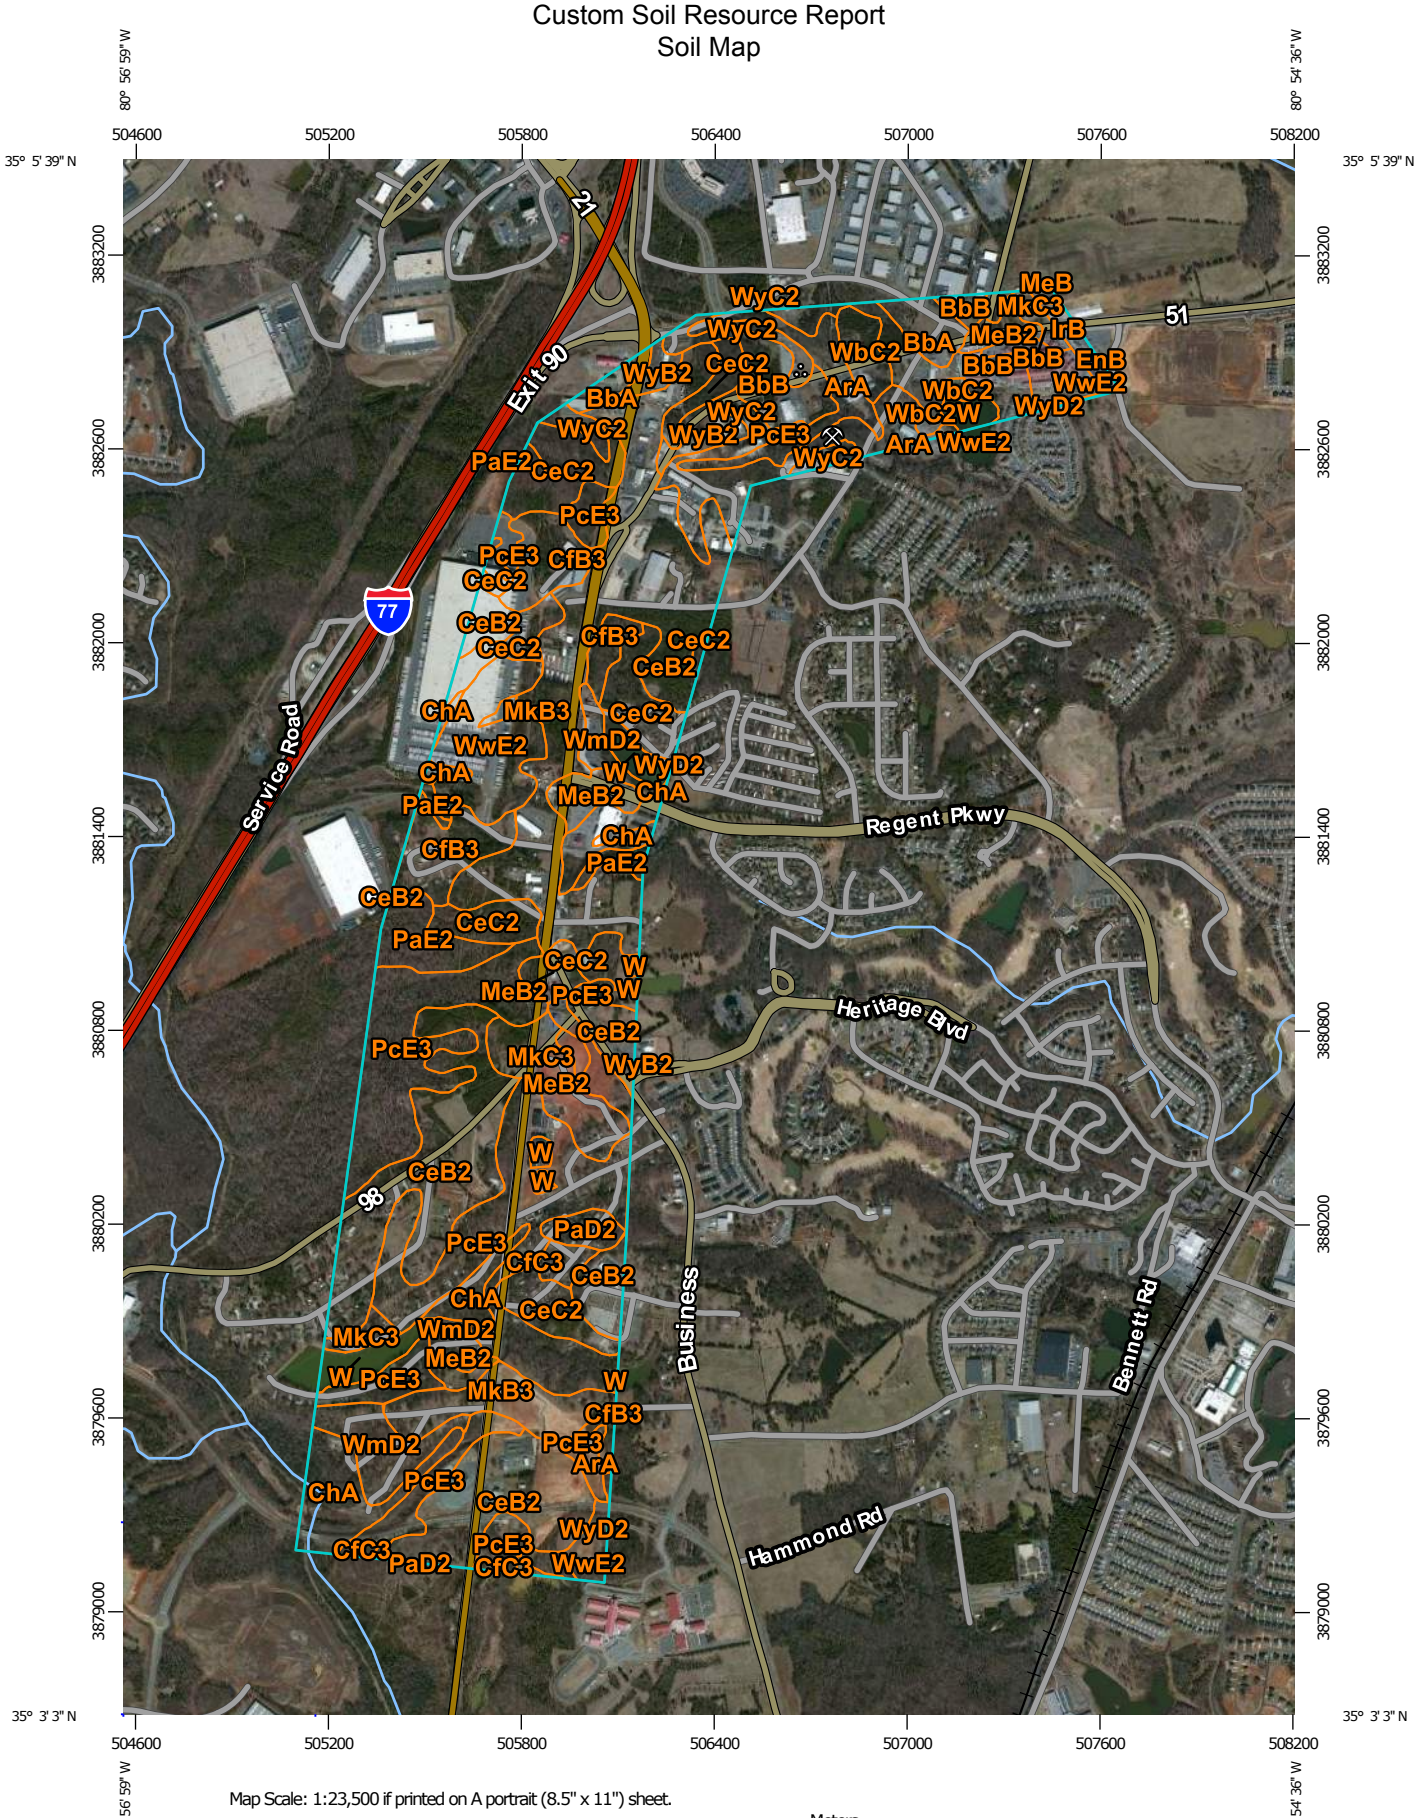
Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil scientists classified and named the soils in the survey area, they compared the

individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.



While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at scales ranging from 1:15,800 to 1:24,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Mecklenburg County, North Carolina
Survey Area Data: Version 14, Sep 10, 2014

Soil Survey Area: York County, South Carolina
Survey Area Data: Version 12, Sep 29, 2015

Your area of interest (AOI) includes more than one soil survey area. These survey areas may have been mapped at different scales, with a different land use in mind, at different times, or at different levels of detail. This may result in map unit symbols, soil properties, and interpretations that do not completely agree across soil survey area boundaries.

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 11, 2011—Feb 13, 2011

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used.

Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Mecklenburg County, North Carolina

EnB—Enon sandy loam, 2 to 8 percent slopes

Map Unit Setting

National map unit symbol: 3t8m
Elevation: 200 to 1,400 feet
Mean annual precipitation: 37 to 60 inches
Mean annual air temperature: 59 to 66 degrees F
Frost-free period: 200 to 240 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Enon and similar soils: 85 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Enon

Setting

Landform: Interfluves
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Saprolite derived from diorite and/or gabbro and/or diabase and/or gneiss

Typical profile

Ap - 0 to 7 inches: fine sandy loam
BA - 7 to 10 inches: sandy clay loam
Bt - 10 to 27 inches: clay
BC - 27 to 33 inches: clay loam
C - 33 to 80 inches: loam

Properties and qualities

Slope: 2 to 8 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Moderate (about 8.3 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2e
Hydrologic Soil Group: C
Hydric soil rating: No

IrB—Iredell fine sandy loam, 1 to 8 percent slopes

Map Unit Setting

National map unit symbol: 3t8x
Elevation: 200 to 1,400 feet
Mean annual precipitation: 37 to 60 inches
Mean annual air temperature: 59 to 66 degrees F
Frost-free period: 200 to 240 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Iredell and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Iredell

Setting

Landform: Interfluves
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Saprolite derived from diorite and/or gabbro and/or diabase and/or gneiss

Typical profile

A - 0 to 6 inches: fine sandy loam
Bt - 6 to 24 inches: clay
BC - 24 to 28 inches: clay loam
C - 28 to 80 inches: loam

Properties and qualities

Slope: 2 to 8 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Moderately well drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 12 to 24 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: High (about 10.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2e
Hydrologic Soil Group: C/D
Hydric soil rating: No

Minor Components

Sedgefield
Percent of map unit: 8 percent
Landform: Ridges
Landform position (two-dimensional): Summit, footslope
Down-slope shape: Concave
Across-slope shape: Concave
Hydric soil rating: No

Wynott
Percent of map unit: 4 percent
Landform: Interfluves
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

Armenia, undrained
Percent of map unit: 3 percent
Landform: Drainageways on interfluves
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: Yes

MeB—Mecklenburg fine sandy loam, 2 to 8 percent slopes

Map Unit Setting
National map unit symbol: 3t92
Elevation: 200 to 1,400 feet
Mean annual precipitation: 37 to 60 inches
Mean annual air temperature: 59 to 66 degrees F
Frost-free period: 200 to 240 days
Farmland classification: All areas are prime farmland

Map Unit Composition
Mecklenburg and similar soils: 85 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Mecklenburg

Setting
Landform: Interfluves
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex

Parent material: Saprolite derived from diorite and/or gabbro and/or diabase and/or gneiss

Typical profile

Ap - 0 to 7 inches: fine sandy loam
Bt - 7 to 34 inches: clay
C - 34 to 80 inches: loam

Properties and qualities

Slope: 2 to 8 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: High (about 9.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2e
Hydrologic Soil Group: C
Hydric soil rating: No

York County, South Carolina

ArA—Armenia loam, 0 to 2 percent slopes, occasionally flooded

Map Unit Setting

National map unit symbol: 2lpwd
Elevation: 450 to 690 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Not prime farmland

Map Unit Composition

Armenia, occasionally flooded, and similar soils: 86 percent
Minor components: 14 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Armenia, Occasionally Flooded

Setting

Landform: Drainageways
Landform position (two-dimensional): Toeslope
Down-slope shape: Linear, concave
Across-slope shape: Linear, concave
Parent material: Alluvium derived from diabase and/or alluvium derived from gabbro and/or alluvium derived from diorite

Typical profile

A - 0 to 4 inches: loam
BA - 4 to 8 inches: clay loam
B1 - 8 to 51 inches: clay
B2 - 51 to 80 inches: clay loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Poorly drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 6 to 18 inches
Frequency of flooding: Occasional
Frequency of ponding: None
Available water storage in profile: Moderate (about 6.5 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4w
Hydrologic Soil Group: D
Hydric soil rating: Yes

Minor Components

Worsham, occasionally flooded

Percent of map unit: 14 percent
Landform: Depressions

Landform position (two-dimensional): Toeslope
Down-slope shape: Concave
Across-slope shape: Concave
Hydric soil rating: Yes

BbA—Brewback fine sandy loam, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 2lpzd
Elevation: 200 to 1,400 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Brewback and similar soils: 80 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Brewback

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder, summit
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from gabbro and/or residuum weathered from diorite and/or residuum weathered from diabase

Typical profile

A - 0 to 4 inches: fine sandy loam
BE - 4 to 10 inches: sandy clay loam
B - 10 to 30 inches: clay
BC - 30 to 36 inches: clay
Cr - 36 to 80 inches: weathered bedrock

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock
Natural drainage class: Somewhat poorly drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 6 to 18 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Low (about 4.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: D
Hydric soil rating: No

Minor Components

Iredell

Percent of map unit: 20 percent
Landform: Interfluves
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

BbB—Brewback fine sandy loam, 2 to 6 percent slopes

Map Unit Setting

National map unit symbol: 2lpzp
Elevation: 200 to 1,400 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Brewback and similar soils: 80 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Brewback

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder, summit
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from gabbro and/or residuum weathered from diorite and/or residuum weathered from diabase

Typical profile

A - 0 to 4 inches: fine sandy loam
BE - 4 to 10 inches: sandy clay loam
B - 10 to 30 inches: clay
BC - 30 to 36 inches: clay
Cr - 36 to 80 inches: weathered bedrock

Properties and qualities

Slope: 2 to 6 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock
Natural drainage class: Somewhat poorly drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 6 to 18 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Low (about 4.2 inches)

Interpretive groups

Across-slope shape: Linear
Hydric soil rating: No

CfC3—Cecil clay loam, 6 to 10 percent slopes, severely eroded

Map Unit Setting

National map unit symbol: 2lq03
Elevation: 400 to 980 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Not prime farmland

Map Unit Composition

Cecil, severely eroded, and similar soils: 97 percent
Minor components: 3 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Cecil, Severely Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from gneiss and/or residuum weathered from granite

Typical profile

A - 0 to 1 inches: sandy loam
BA - 1 to 3 inches: sandy clay loam
B - 3 to 80 inches: clay

Properties and qualities

Slope: 6 to 10 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Moderate (about 6.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: B
Hydric soil rating: No

Minor Components

Helena, moderately eroded

Percent of map unit: 3 percent
Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

ChA—Chewacla loam, 0 to 2 percent slopes, frequently flooded

Map Unit Setting

National map unit symbol: 2sclw
Elevation: 90 to 1,930 feet
Mean annual precipitation: 40 to 69 inches
Mean annual air temperature: 50 to 66 degrees F
Frost-free period: 180 to 280 days
Farmland classification: Prime farmland if drained and either protected from flooding or not frequently flooded during the growing season

Map Unit Composition

Chewacla, frequently flooded, and similar soils: 80 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Chewacla, Frequently Flooded

Setting

Landform: Flood plains
Landform position (two-dimensional): Toeslope

Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium

Typical profile

A - 0 to 10 inches: loam
Bw - 10 to 80 inches: sandy clay loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Somewhat poorly drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: About 6 to 24 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Available water storage in profile: High (about 10.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4w
Hydrologic Soil Group: B/D
Hydric soil rating: No

Minor Components

Toccoa, frequently flooded

Percent of map unit: 15 percent
Landform: Flood plains
Landform position (two-dimensional): Toeslope
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Wehadkee, ponded

Percent of map unit: 5 percent
Landform: Flood plains
Landform position (two-dimensional): Toeslope
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: Yes

MeB2—Mecklenburg-Wynott complex, 2 to 6 percent slopes, moderately eroded

Map Unit Setting

National map unit symbol: 2lq2k
Elevation: 410 to 960 feet

Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Mecklenburg, moderately eroded, and similar soils: 50 percent
Wynott, moderately eroded, and similar soils: 36 percent
Minor components: 14 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Mecklenburg, Moderately Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder, summit
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite

Typical profile

A - 0 to 4 inches: sandy loam
B - 4 to 35 inches: clay
BC - 35 to 50 inches: clay loam
C - 50 to 80 inches: loam

Properties and qualities

Slope: 2 to 6 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Moderate (about 7.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Hydric soil rating: No

Description of Wynott, Moderately Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder, summit
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite and/or residuum weathered from gabbro

Typical profile

A - 0 to 5 inches: sandy loam
B - 5 to 21 inches: clay
BC - 21 to 29 inches: sandy clay loam
Cr - 29 to 80 inches: weathered bedrock

Properties and qualities

Slope: 2 to 6 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock
Natural drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Low (about 3.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: D
Hydric soil rating: No

Minor Components

Winnsboro, moderately eroded

Percent of map unit: 14 percent
Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder, summit
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

MkB3—Mecklenburg-Wynott complex, 2 to 6 percent slopes, severely eroded

Map Unit Setting

National map unit symbol: 2lq2q
Elevation: 400 to 980 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Not prime farmland

Map Unit Composition

Mecklenburg, severely eroded, and similar soils: 50 percent

Wynott, severely eroded, and similar soils: 30 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Mecklenburg, Severely Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder, summit
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite

Typical profile

A - 0 to 2 inches: sandy loam
B - 2 to 26 inches: clay
BC - 26 to 40 inches: sandy clay loam
CB - 40 to 80 inches: sandy loam

Properties and qualities

Slope: 2 to 6 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Moderate (about 8.3 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: C
Hydric soil rating: No

Description of Wynott, Severely Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder, summit
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite and/or residuum weathered from gabbro

Typical profile

A - 0 to 2 inches: sandy loam
B - 2 to 26 inches: clay
BC - 26 to 32 inches: sandy clay loam
Cr - 32 to 80 inches: weathered bedrock

Properties and qualities

Slope: 2 to 6 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock

Natural drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Low (about 3.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: D
Hydric soil rating: No

Minor Components

Cecil, severely eroded

Percent of map unit: 20 percent
Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder, summit
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

MkC3—Mecklenburg-Wynott complex, 6 to 10 percent slopes, severely eroded

Map Unit Setting

National map unit symbol: 2lq2t
Elevation: 400 to 980 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Not prime farmland

Map Unit Composition

Mecklenburg, severely eroded, and similar soils: 50 percent
Wynott, severely eroded, and similar soils: 30 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Mecklenburg, Severely Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder
Landform position (three-dimensional): Interfluve, side slope

Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite

Typical profile

A - 0 to 2 inches: sandy loam
B - 2 to 26 inches: clay
BC - 26 to 40 inches: sandy clay loam
CB - 40 to 80 inches: sandy loam

Properties and qualities

Slope: 6 to 10 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Moderate (about 8.3 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: C
Hydric soil rating: No

Description of Wynott, Severely Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite and/or residuum weathered from gabbro

Typical profile

A - 0 to 2 inches: sandy loam
B - 2 to 26 inches: clay
BC - 26 to 32 inches: sandy clay loam
Cr - 32 to 80 inches: weathered bedrock

Properties and qualities

Slope: 6 to 10 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Low (about 3.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: D
Hydric soil rating: No

Minor Components

Cecil, severely eroded

Percent of map unit: 20 percent
Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

PaD2—Pacolet sandy clay loam, 10 to 15 percent slopes, moderately eroded

Map Unit Setting

National map unit symbol: 2lq32
Elevation: 250 to 600 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Not prime farmland

Map Unit Composition

Pacolet, moderately eroded, and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Pacolet, Moderately Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from granite and/or residuum weathered from gneiss

Typical profile

A - 0 to 2 inches: sandy loam
B - 2 to 26 inches: clay
BC - 26 to 43 inches: clay loam

C - 43 to 80 inches: loam

Properties and qualities

Slope: 10 to 15 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Moderate (about 8.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 6e
Hydrologic Soil Group: B
Hydric soil rating: No

Minor Components

Hard labor

Percent of map unit: 10 percent
Landform: Interfluves
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

PaE2—Pacolet sandy clay loam, 15 to 25 percent slopes, moderately eroded

Map Unit Setting

National map unit symbol: 2lq33
Elevation: 220 to 750 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Not prime farmland

Map Unit Composition

Pacolet, moderately eroded, and similar soils: 95 percent
Minor components: 5 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Pacolet, Moderately Eroded

Setting

Landform: Interfluves

Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from gneiss and/or residuum weathered from granite

Typical profile

A - 0 to 2 inches: sandy loam
B - 2 to 26 inches: clay
BC - 26 to 43 inches: clay loam
C - 43 to 80 inches: loam

Properties and qualities

Slope: 15 to 25 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Moderate (about 8.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7e
Hydrologic Soil Group: B
Hydric soil rating: No

Minor Components

Hard labor

Percent of map unit: 5 percent
Landform: Interfluves
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

PcE3—Pacolet clay loam, 15 to 25 percent slopes, severely eroded

Map Unit Setting

National map unit symbol: 2lq31
Elevation: 220 to 960 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Not prime farmland

Map Unit Composition

Pacolet, severely eroded, and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Pacolet, Severely Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from gneiss and/or residuum weathered from granite

Typical profile

A - 0 to 1 inches: sandy clay loam
B - 1 to 26 inches: clay
BC - 26 to 80 inches: clay loam

Properties and qualities

Slope: 15 to 25 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Moderate (about 7.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7e
Hydrologic Soil Group: B
Hydric soil rating: No

Minor Components

Winnsboro, moderately eroded

Percent of map unit: 5 percent
Landform: Interfluves
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

Wynott, moderately eroded

Percent of map unit: 5 percent
Landform: Interfluves
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex

Across-slope shape: Linear
Hydric soil rating: No

W—Water

Map Unit Setting
National map unit symbol: 4ts5
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Not prime farmland

Map Unit Composition
Water: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

WbC2—Wynott-Brewback complex, 6 to 10 percent slopes, moderately eroded

Map Unit Setting
National map unit symbol: 2lq4p
Elevation: 410 to 960 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Not prime farmland

Map Unit Composition
Wynott, moderately eroded, and similar soils: 45 percent
Brewback, moderately eroded, and similar soils: 35 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Wynott, Moderately Eroded

Setting
Landform: Interfluves
Landform position (two-dimensional): Shoulder, backslope
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite and/or residuum weathered from gabbro

Typical profile
A - 0 to 5 inches: sandy loam
B - 5 to 21 inches: clay

BC - 21 to 29 inches: sandy clay loam
Cr - 29 to 80 inches: weathered bedrock

Properties and qualities

Slope: 6 to 10 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Low (about 3.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: D
Hydric soil rating: No

Description of Brewback, Moderately Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Shoulder, backslope
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite and/or residuum weathered from gabbro

Typical profile

A - 0 to 2 inches: sandy loam
BE - 2 to 9 inches: sandy clay loam
B - 9 to 36 inches: clay
BC - 36 to 38 inches: sandy clay loam
Cr - 38 to 80 inches: weathered bedrock

Properties and qualities

Slope: 6 to 10 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock
Natural drainage class: Somewhat poorly drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 6 to 18 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Low (about 4.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: D
Hydric soil rating: No

Minor Components

Winnsboro, moderately eroded

Percent of map unit: 20 percent
Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

WmD2—Wynott-Mecklenburg complex, 10 to 15 percent slopes, moderately eroded

Map Unit Setting

National map unit symbol: 2lq4s
Elevation: 410 to 960 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Not prime farmland

Map Unit Composition

Wynott, moderately eroded, and similar soils: 45 percent
Mecklenburg, moderately eroded, and similar soils: 40 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Wynott, Moderately Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite and/or residuum weathered from gabbro

Typical profile

A - 0 to 5 inches: sandy loam
B - 5 to 21 inches: clay
BC - 21 to 29 inches: sandy clay loam
Cr - 29 to 80 inches: weathered bedrock

Properties and qualities

Slope: 10 to 15 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock

Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Low (about 3.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 6e
Hydrologic Soil Group: D
Hydric soil rating: No

Description of Mecklenburg, Moderately Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite

Typical profile

A - 0 to 4 inches: sandy loam
B - 4 to 35 inches: clay
BC - 35 to 50 inches: clay loam
C - 50 to 80 inches: loam

Properties and qualities

Slope: 10 to 15 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Moderate (about 7.6 inches)

Interpretive groups

Across-slope shape: Linear
Hydric soil rating: No

WwE2—Wynott-Wilkes complex, 15 to 25 percent slopes, moderately eroded

Map Unit Setting

National map unit symbol: 2lq4w
Elevation: 410 to 960 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Not prime farmland

Map Unit Composition

Wynott, moderately eroded, and similar soils: 55 percent
Wilkes, moderately eroded, and similar soils: 40 percent
Minor components: 5 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Wynott, Moderately Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite and/or residuum weathered from gabbro

Typical profile

A - 0 to 5 inches: sandy loam
B - 5 to 21 inches: clay
BC - 21 to 29 inches: sandy clay loam
Cr - 29 to 80 inches: weathered bedrock

Properties and qualities

Slope: 15 to 25 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock
Natural drainage class: Well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Low (about 3.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7e
Hydrologic Soil Group: D
Hydric soil rating: No

Description of Wilkes, Moderately Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite and/or residuum weathered from gabbro

Typical profile

A - 0 to 4 inches: sandy loam
B - 4 to 15 inches: sandy clay loam
BC - 15 to 18 inches: sandy loam
Cr - 18 to 45 inches: weathered bedrock
R - 45 to 80 inches: unweathered bedrock

Properties and qualities

Slope: 15 to 25 percent
Depth to restrictive feature: 10 to 20 inches to paralithic bedrock; 40 to 72 inches to lithic bedrock
Natural drainage class: Well drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Very low (about 2.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7e
Hydrologic Soil Group: D
Hydric soil rating: No

Minor Components

Winnsboro, moderately eroded

Percent of map unit: 5 percent
Landform: Interfluves
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

WyB2—Wynott-Winnsboro complex, 2 to 6 percent slopes, moderately eroded

Map Unit Setting

National map unit symbol: 2lq53
Elevation: 410 to 960 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Wynott, moderately eroded, and similar soils: 55 percent
Winnsboro, moderately eroded, and similar soils: 30 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Wynott, Moderately Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder, summit
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite and/or residuum weathered from gabbro

Typical profile

A - 0 to 5 inches: sandy loam
B - 5 to 21 inches: clay
BC - 21 to 29 inches: sandy clay loam
Cr - 29 to 80 inches: weathered bedrock

Properties and qualities

Slope: 2 to 6 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock
Natural drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Low (about 3.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified

Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: D
Hydric soil rating: No

Description of Winnsboro, Moderately Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder, summit
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite and/or residuum weathered from gabbro

Typical profile

A - 0 to 4 inches: sandy loam
B - 4 to 25 inches: clay
BC - 25 to 32 inches: sandy clay loam
C - 32 to 52 inches: sandy loam
Cr - 52 to 80 inches: weathered bedrock

Properties and qualities

Slope: 2 to 6 percent
Depth to restrictive feature: 40 to 60 inches to paralithic bedrock
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Moderate (about 6.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Mecklenburg, moderately eroded

Percent of map unit: 15 percent
Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder, summit
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

WyC2—Wynott-Winnsboro complex, 6 to 10 percent slopes, moderately eroded

Map Unit Setting

National map unit symbol: 2lq56
Elevation: 410 to 960 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Not prime farmland

Map Unit Composition

Wynott, moderately eroded, and similar soils: 55 percent
Winnsboro, moderately eroded, and similar soils: 35 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Wynott, Moderately Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite and/or residuum weathered from gabbro

Typical profile

A - 0 to 5 inches: sandy loam
B - 5 to 21 inches: clay
BC - 21 to 29 inches: sandy clay loam
Cr - 29 to 80 inches: weathered bedrock

Properties and qualities

Slope: 6 to 10 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Low (about 3.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified

Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: D
Hydric soil rating: No

Description of Winnsboro, Moderately Eroded

Setting

Landform: Interfluves
Landform position (two-dimensional): Backslope, shoulder
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Residuum weathered from diorite and/or residuum weathered from gabbro

Typical profile

A - 0 to 4 inches: sandy loam
B - 4 to 25 inches: clay
BC - 25 to 32 inches: sandy clay loam
C - 32 to 52 inches: sandy loam
Cr - 52 to 80 inches: weathered bedrock

Properties and qualities

Slope: 6 to 10 percent
Depth to restrictive feature: 40 to 60 inches to paralithic bedrock
Natural drainage class: Well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Moderate (about 6.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Wilkes, moderately eroded

Percent of map unit: 10 percent
Landform: Interfluves
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

WyD2—Wynott-Winnsboro complex, 10 to 15 percent slopes, moderately eroded

Map Unit Setting

National map unit symbol: 2lq58
Elevation: 410 to 960 feet
Mean annual precipitation: 42 to 55 inches
Mean annual air temperature: 51 to 72 degrees F
Frost-free period: 202 to 249 days
Farmland classification: Not prime farmland

Map Unit Composition

Wynott, moderately eroded, and similar soils: 50 percent
Winnsboro, moderately eroded, and similar soils: 35 percent

FEMA FIRMs

FLOOD HAZARD INFORMATION

SEE FIS REPORT FOR DETAILED LEGEND AND INDEX MAP FOR FIRM PANEL LAYOUT

THE INFORMATION DEPICTED ON THIS MAP AND SUPPORTING DOCUMENTATION ARE ALSO AVAILABLE IN DIGITAL FORMAT AT HTTP://MSC.FEMA.GOV

SPECIAL FLOOD HAZARD AREAS
- Without Base Flood Elevation (BFE) *Zone A, V, A99*
- With BFE or Depth *Zone AE, AO, AH, VE, AR*
- Regulatory Floodway

OTHER AREAS OF FLOOD HAZARD
- 0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile *Zone X*
- Future Conditions 1% Annual Chance Flood Hazard *Zone X*
- Area with Reduced Flood Risk due to Levee See Notes *Zone X*

OTHER AREAS
- NO SCREEN Areas of Minimal Flood Hazard *Zone X*
- Area of Undetermined Flood Hazard *Zone D*

GENERAL STRUCTURES
- Channel, Culvert or Storm Sewer
- Accredited or Provisionally Accredited Levee, Dike or Floodwall
- Non-accredited Levee, Dike or Floodwall
- E 18.2 Cross Sections with 1% Annual Chance
- 17.5 Water Surface Elevation (BFE)
- 8 Coastal Transect
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature
- 513 Base Flood Elevation Line (BFE)

OTHER FEATURES
- Limit of Study
- Jurisdiction Boundary

NOTES TO USERS

For information and questions about this map, available products associated with this FIRM including historic versions of this FIRM, how to order products or the National Flood Insurance Program in general, please call the FEMA Map Information eXchange at 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA Map Service Center website at http://msc.fema.gov. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the website. Users may determine the current map date for each FIRM panel by visiting the FEMA Map Service Center website or by calling the FEMA Map Information eXchange.

Communities annexing land on adjacent FIRM panels must obtain a current copy of the adjacent panel as well as the current FIRM Index. These may be ordered directly from the Map Service Center at the number listed above.

For community and countywide map dates refer to the Flood Insurance Study report for this jurisdiction.

To determine if flood insurance is available in this community, contact your Insurance agent or call the National Flood Insurance Program at 1-800-638-6620.

Base map information shown on this FIRM was provided in digital format by York County, South Carolina and Catawba Regional Council of Governments, dated 2008.

The digital Flood Insurance Rate Map (FIRM) was produced through a unique cooperative partnership between the State of South Carolina and the Federal Emergency Management Agency (FEMA). The State of South Carolina has implemented a long term approach of floodplain management to decrease the costs associated with flooding. This is demonstrated by the State's commitment to map floodplain areas at the local level. As a part off this effort, the state of South Carolina has joined in a Cooperating Technical State agreement with FEMA to produce and maintain this digital FIRM. http://dnr.state.sc.us

1. EP-2 is approximately 3/5 filled with sediment in existing conditions and has been modeled accordingly.
2. EP-6 is approximately 1/3 filled with sediment in existing conditions, so culvert was analyzed in HY-8 as a 6' span x 4' height RCBC.

Rock Hill, South Carolina 29730

Assessment date: January 14, 2022

Prepared by: David Speer, P.E.

Culvert @ Sta. 33+79 US 21

The culvert was constructed as part of SCDOT File No. 46.240 with a plans date December 19, 1940 at approximately Station 319+28.8. It is a 5'x5' single reinforced concrete box culvert with a length of approximately 132 feet with approximately 25 feet of fill above the culvert. The culvert details were not included in the project files on SCDOT's Plans Online. The assessment of the west end of the culvert is in a sump and is almost 100% submerged under water and soil. Only the head wall was visible during the site visit (see figure 1). The east end of the culvert was approximately 90% filled with water and soil. The inside of the culvert was inaccessible (see figure 2).

The visible concrete was competent and no signs of deterioration were present. Additionally, there were no cracks shown in the roadway above or any disturbances in the slopes above the culvert. This indicates that the culvert is intact and its structure has not been compromised. Based on these observations and the fact that the structure has been in place for many years with no disturbance in the roadway above, KCI recommends that the existing culvert be left in place and extended.

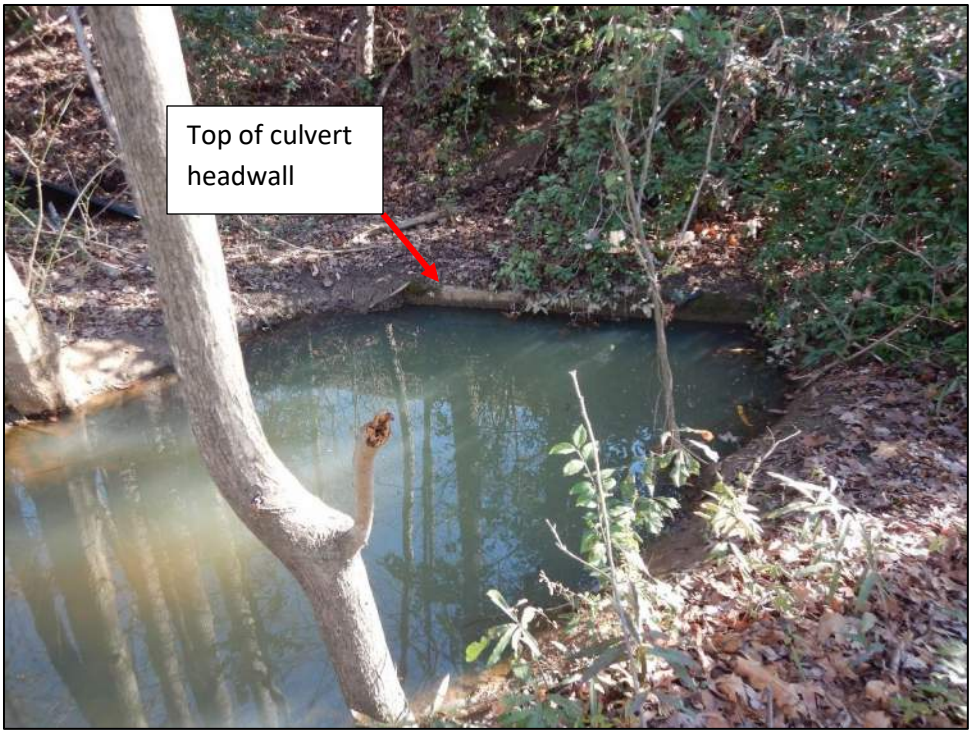

Figure 1: West end of culvert @ sta. 33+79

Figure 2: East end of culvert @ sta. 33+79

Culvert @ Sta. 41+06 US 21

The culvert was constructed as part of SCDOT File No. 46.240 with a plans date December 19, 1940, at approximately Station 326+57.1. It is a 5'x5' single reinforced concrete box culvert with a length of approximately 122 feet with approximately 17 feet of fill above the culvert. The culvert details were not included in the project files on SCDOT's Plans Online. The west end of the culvert did not show any signs of deterioration (see figure 3). On the interior of the culvert, the bottom of the top slab and inside face of the walls did not show any signs of deterioration or water intrusion. The east end of the culvert was inaccessible due to very steep slope and the presence of thick brush.

No signs of significant deterioration were observed during the structural assessment. The pavement and ground above and around the culvert did not show signs of cracking or settlement. Based on these observations, KCI recommends that the existing culvert be left in place and extended.

Figure 3:West End Culvert @ Sta. 41+06

Culvert @ Sta. 316+23 SC 51

The culvert was constructed as part of Federal Aid Project 216 (REOP) with a plans date July 18, 1927, at approximately Station 316+31. It is a 6'x6' single reinforced concrete box culvert with a length of approximately 30 feet with approximately 4 feet of fill above the culvert The original plans show a 6'x8' opening, however during a site visit conducted on May 30, 2019, it was determined that the culvert was a 6'x6' (see figures 4-6). The south end of the culvert did not show any signs of deterioration (see figure 7). Additionally, the north end of the culvert did not show any signs of deterioration (see figure 8). On the interior of the culvert, the bottom of the top slab and inside face of the walls did not show any signs of deterioration or water intrusion (see figure 8-9).

No signs of significant deterioration were observed during the structural assessment. The pavement and ground above and around the culvert did not show signs of cracking or settlement. Based on these observations, KCI recommends that the existing culvert be left in place and extended.

Figure 4: Measuring width of south end of culvert @ sta. 316+23

Figure 5: Measuring to top of soil at south end of culvert @ sta. 316+23

Figure 6: Measuring depth of soil at south end of culvert @ sta. 316+23

Figure 7: South end of culvert @ sta. 316+23

Figure 8: North end of culvert @ sta. 316+23

Figure 9: Inside of culvert @ sta. 316+23

CONCLUSION

Based on the condition of all three of the culverts during the site visits, KCI recommends that these culverts are suitable to be left in place and to have extensions added to the ends to facilitate the widening of the supported roadways.

PRE VS. POST OUTFALL COMPARISON

GIVEN:

Outfall Location: Road Name **US 21**

Analysis Point **Outfalls 1, 2 and 3**

Outfall 1						Notes
	2yr	10yr	25yr	50yr	100yr	Area from Outfall 2 has been redirected to Outfall 1.
Pre (Existing) Discharge (cfs):	40.0	75.0	96.0	115.0	131.0	
Post (Proposed) Discharge (cfs):	86.0	145.0	182.0	211.0	242.0	

Outfall 2						Notes
	2yr	10yr	25yr	50yr	100yr	Area from Outfall 2 has been redirected to Outfall 1.
Pre (Existing) Discharge (cfs):	45.0	108.0	153.0	192.0	233.0	
Post (Proposed) Discharge (cfs):	30.0	84.0	121.0	154.0	188.0	

Outfall 3						Notes
	2yr	10yr	25yr	50yr	100yr	Area from Outfall 3 has been redirected to Outfall 6.
Pre (Existing) Discharge (cfs):	106.0	220.0	293.0	354.0	420.0	
Post (Proposed) Discharge (cfs):	112.0	227.0	299.0	360.0	425.0	

Outfall 6						Notes
	2yr	10yr	25yr	50yr	100yr	Area from Outfall 3 has been redirected to Outfall 6. Post discharges include new Outfalls 6a and 6b.
Pre (Existing) Discharge (cfs):	24.0	45.0	59.0	69.0	81.0	
Post (Proposed) Discharge (cfs):	18.0	35.0	45.0	54.0	63.0	

Forest Lake (Outfall 2 + 3)						Notes
	2yr	10yr	25yr	50yr	100yr	Based on redirecting Outfall 2 and Outfall 3 areas, overall discharge to Forest Lake has been reduced.
Pre (Existing) Discharge (cfs):	151.0	328.0	446.0	546.0	653.0	
Post (Proposed) Discharge (cfs):	142.0	311.0	420.0	514.0	613.0	
Difference (cfs):	-9.0	-17.0	-26.0	-32.0	-40.0	
Δ %:	-6.0	-5.2	-5.8	-5.9	-6.1	

REMARKS:

To reduce overall peak discharges to Forest Lake, areas from Outfalls 2 and 3 have been reallocated to adjacent Outfalls 1 and 6 respectively. Please see the accompanying exhibits to see the new pipe system alignments used to accomplish this approach.

PRE VS. POST OUTFALL COMPARISON

GIVEN:

Outfall Location: Road Name **US 21**

Analysis Point **Outfalls 1, 2 and 3**

Outfall 1						Notes
	2yr	10yr	25yr	50yr	100yr	Area from Outfall 2 has been redirected to Outfall 1.
Pre (Existing) Discharge (cfs):	40.0	75.0	96.0	115.0	131.0	
Post (Proposed) Discharge (cfs):	86.0	145.0	182.0	211.0	242.0	

Outfall 2						Notes
	2yr	10yr	25yr	50yr	100yr	Area from Outfall 2 has been redirected to Outfall 1.
Pre (Existing) Discharge (cfs):	45.0	108.0	153.0	192.0	233.0	
Post (Proposed) Discharge (cfs):	30.0	84.0	121.0	154.0	188.0	

Outfall 3						Notes
	2yr	10yr	25yr	50yr	100yr	Area from Outfall 3 has been redirected to Outfall 6.
Pre (Existing) Discharge (cfs):	106.0	220.0	293.0	354.0	420.0	
Post (Proposed) Discharge (cfs):	112.0	227.0	299.0	360.0	425.0	

Outfall 6						Notes
	2yr	10yr	25yr	50yr	100yr	Area from Outfall 3 has been redirected to Outfall 6. Post discharges include new Outfalls 6a and 6b.
Pre (Existing) Discharge (cfs):	24.0	45.0	59.0	69.0	81.0	
Post (Proposed) Discharge (cfs):	18.0	35.0	45.0	54.0	63.0	

Forest Lake (Outfall 2 + 3)						Notes
	2yr	10yr	25yr	50yr	100yr	Based on redirecting Outfall 2 and Outfall 3 areas, overall discharge to Forest Lake has been reduced.
Pre (Existing) Discharge (cfs):	151.0	328.0	446.0	546.0	653.0	
Post (Proposed) Discharge (cfs):	142.0	311.0	420.0	514.0	613.0	
Difference (cfs):	-9.0	-17.0	-26.0	-32.0	-40.0	
Δ %:	-6.0	-5.2	-5.8	-5.9	-6.1	

REMARKS:

To reduce overall peak discharges to Forest Lake, areas from Outfalls 2 and 3 have been reallocated to adjacent Outfalls 1 and 6 respectively. Please see the accompanying exhibits to see the new pipe system alignments used to accomplish this approach.

Subject: US-21/SC-51 Widening (0042332) Dam Impacts
Attachments: D3645_Inundation_Mapbook.pdf; D3645 Crest.jpg; D3645Aux.jpg; D3645Primary Outfall.jpg; US 21 Forest Lake.JPG

This e-mail is from outside STV

Gentlemen:

Happy Thursday and hope you are doing well. For the project in the subject line, DHEC has alerted us to a concern with the Lake Forest Dam, which is located approximately 2200 ft from the existing ROW of US-21. I have attached several items to this email concerning the property. Please see the exert from the original email below regarding this issue.

I wanted to make you aware of a concern that was initially raised by a dam owner we are currently working with in York County. Based on the current condition of the dam, the Department shares their concerns with the likely increase in runoff from the widening of US21 from 2 lanes to 5 lanes and potential impacts to the dam. The dam is known to us as Forest Lake (D3645). There are several homes located below the dam; therefore, it is classified as High Hazard based on potential loss of life which may result from failure of the dam.

As shown in the screen grab from SCDOT's project viewer, Lake Forest Dam is located approximately 2200 feet from the existing right-of-way of US21. DHEC Dam Safety has been trying to work with the dam's owner to address significant deficiencies in the primary outlet control structure and auxiliary spillway. It appears from our inspections that the primary is not functioning, which has resulted in increased flows through the auxiliary. These continuous flows have now resulted in head cutting of the earthen spillway, which has progressed since December 2019. The owner is currently working to install interim measures to lower the water level; and, we will be increasing our compliance/enforcement activities to have them engage a professional engineer to work on a plan for repair.

As SCDOT's engineers and consultants work on the design for widening of US21, the department would ask that particular attention be paid and consideration be made for the lack of capacity at Forest Lake Dam. Section 72-425.D(4)(a)(1) of the Standards for Stormwater Management and Sediment Reduction Regulations requires such an analysis and is critical given the potential impacts from failure of this dam due to hydrologic loadings in its present condition.

If SCDOT needs any of the data we have on this dam (inspections, etc,), please don't hesitate to let us know. Included are a few photos from a routine monitoring visit in July, as well as the DSS Wise Lite Inundation Mapbook our staff developed. We would welcome discussing this issue with you as the project is further developed.

Thank you ☺

"Make your dreams happen."

Subject: RE: Forest Lake Community and Surrounding Construction

Phil,

Thank you very much for the reply. I understand Pennies For Progress and the York County Stormwater Department are aware of our situation. It is comforting to hear that the Design Engineer will consider the drainage basin in its highway design. I did not want to come across as being upset, I just wanted the county to realize we are here, and we don't want to be forgotten when the time comes. I believe our discharge pipe through the dam is 15". A short site visit will make obvious the amount of property that feeds our lake. It is very concerning to say the least.

We are having a neighborhood meeting soon and I will include some of this information to the residents. Just that the county is aware of the growth impact to our lake. I will not go into the future highway plans.

Your reply was very timely and I sincerely appreciate your attention to this. Feel free to contact me anytime concerning this or any other issues that affect our community.

Thank you,

Subject: RE: Forest Lake Community and Surrounding Construction
Importance: High

Dear Mr. Markle,

My name is Phil Leazer and I work for the York County Engineering Department. I have been assigned to the Pennies for Progress Program, York County's large-scale roadway improvement program. We are in receipt of an email you sent to Councilman Michael Johnson regarding the Forest Lake Community and would like to offer the following:

First let me start by apologizing to both you and Councilman Johnson. We have been a little overwhelmed here in this office of late and are woefully behind on responding to emails. We apologize for the delay in getting back to you on this very important issue.

You are very much correct, the York County Pennies for Progress Program is beginning to look at the possibility of widening US 21 from the Captain Steve's restaurant at Springfield Parkway north to SC 51. We have started to gather very preliminary information along this corridor that we will use to develop a concept plan for this work. (Concept plan being nothing more than what kind of roadway facility is needed along this corridor.) Once this concept plan is complete, we will then have a better idea of what areas a widened roadway may impact.

We have already been in discussions with the York County Stormwater Department about the Forest Lake Area even before your email. We too share the same concerns as you and want to make sure what we may end up doing on US 21 does not negatively affect downstream and probably more importantly the 15 acres lake that defines your neighborhood. As soon as we got your email, we contacted the engineering design firm that we have working on this project and let them know we need to coordinate with the Forest Lake Development as we move beyond the concept plan stage of this project. With your permission we will add you to our list of property owners to coordinate with to make sure we get you all the information you need to feel more comfortable with the project.

Again, I apologize for the delay in getting back to you on this issue.

If you have any questions or comments, or would like to discuss this any further, please do not hesitate to contact me at any of the outlets below.

Thanks you for giving us the opportunity to answer your questions and bring you in on this project.

Subject: Forest Lake Community and Surrounding Construction

Mr. Johnson,

I need your help. I am the President of the Forest Lake Community Club. Our subdivision is located just north of Captain Steve's Fish Camp on the west side of Hwy 21 By-Pass at the intersection of Gold Hill Rd. We are experiencing drainage problems caused by new and recent development, and now we see signs of future development coming. We need the County's help in fixing drainage problems that are a direct result from this upstream development. I don't know the State laws, but I understand one cannot discharge rainfall runoff onto adjacent properties resulting in damage to that property. We feel this is what the County has allowed to happen to us.

Our neighborhood has a 15 acre lake. It is fed by a pipe that comes under Hwy 21. Since the construction of the Apartment buildings on the corner of Gold Hill Rd and Hwy 21 on the east side, we have experienced a huge increase in the amount of water coming into our lake. This development's erosion run off has contaminated our lake's water with silt and literally filled-in the upper end of the lake. On top of that, the increased run off from the complex's impervious area has over taxed the lake's existing drainage system. We now experience conditions that exceed our lakes drainage system capabilities. This additional volume bypasses the lakes outlet drainage system, thus relying on the emergency overflow around the dam. This situation is fine for emergencies, but we are now experiencing these "emergencies" nearly every rainfall. Before the complex was built, I had only seen an overflow condition once in over ten years. This upstream development is the cause and will eventually cause the dam to fail.

Recently we have seen surveyors and underground locations marking the right-of-way of Hwy 21. This is done for engineering purposes when future developments are being designed. If this is for a highway widening, or any other development increasing impervious area, the impact on the lake will become exponential. I find it unacceptable that we (Forest Lake) have not been contacted by any local Government Department about any of these projects, we only see the surveyors flagging trees and running their control, even on our private property. I understand how a drainage system works and how it can impact existing downstream infrastructure. If Hwy 21 is improved to something similar to Gold Hill Rd, the impact to our dam would be catastrophic. A quick look at Google Maps will show there are 6 or more houses located directly behind and downstream of this dam. The results of a dam breach are unthinkable.

It is incomprehensible that York County's Engineering and Zoning Departments did not consider the impact of this, and the future development, would and will have on the existing creeks and eco systems down-stream, especially when they immediately feed a lake. I am all for growth and future development

in York County. And I would love to see Hwy 21 By-Pass improved, and any other development projects scheduled for this area. But we need to make sure our lake's discharge drainage system is included in the scope of such projects, because we are directly impacted by them.

I feel this could be a long hard fight for us, so we must have the support of our local representatives, most importantly you. If you would like to discuss this or even come make a site visit, we would love to have you. Feel free to contact me anytime.

Respectfully,

Korey Markle

Hydraulic Analysis Report
Culvert Outfalls

Project Data

Project Title:

Designer:

Project Date: Monday, June 06, 2016

Project Units: U.S. Customary Units

Notes:

Riprap Analysis: Culvert EP-2

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 154 cfs

Culvert Diameter: 5 ft

Normal Depth in Culvert: 1.85 ft

Tailwater Depth: 6.68 ft

If tailwater is unknown, use 0.4D

flow is subcritical

Result Parameters

Tailwater Depth Used in Computations: 6.68 ft

Culvert Diameter Used in Computations: 5 ft

Computed D50: 3.42899 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 20 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 28.3333 ft

No channel used in calculations

Riprap Analysis: Culvert EP-3

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 204 cfs

Culvert Diameter: 5 ft

Normal Depth in Culvert: 2.72 ft

Tailwater Depth: 2.23 ft

If tailwater is unknown, use 0.4D

flow is sbcritical

Result Parameters

Tailwater Depth Used in Computations: 2.23 ft

Culvert Diameter Used in Computations: 5 ft

Computed D50: 14.9434 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS IV

Riprap Class Order: 4

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 30 in

d85: 21 in

d50: 15.5 in

d15: 10.5 in

Layout Recommendations

Apron Length: 30 ft

Apron Depth: 2.84167 ft

Apron Width (at end): 35 ft

No channel used in calculations

Riprap Analysis: Culvert CLP-4

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 42 cfs

Culvert Diameter: 3 ft

Normal Depth in Culvert: 1.23 ft

Tailwater Depth: 1.31 ft

If tailwater is unknown, use 0.4D

flow is sbcritical

Result Parameters

Tailwater Depth Used in Computations: 1.31 ft

Culvert Diameter Used in Computations: 3 ft

Computed D50: 6.11093 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 12 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 17 ft

No channel used in calculations

Riprap Analysis: Culvert EP-5

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 8 cfs

Culvert Diameter: 1.5 ft

Normal Depth in Culvert: 0.48 ft

Tailwater Depth: 0.74 ft

If tailwater is unknown, use 0.4D

flow is sbcritical

Result Parameters

Tailwater Depth Used in Computations: 0.74 ft

Culvert Diameter Used in Computations: 1.5 ft

Computed D50: 2.9875 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 6 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 8.5 ft

No channel used in calculations

Riprap Analysis: Culvert EP-6

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 44 cfs

Culvert Diameter: 4 ft

Normal Depth in Culvert: 0.51 ft

Tailwater Depth: 1.2 ft

If tailwater is unknown, use 0.4D

flow is sbcritical

Result Parameters

Tailwater Depth Used in Computations: 1.6 ft

Culvert Diameter Used in Computations: 4 ft

Computed D50: 3.62753 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 16 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 22.6667 ft

No channel used in calculations

STV

STV Incorporated Consulting Engineers 454 S Anderson Rd, Suite 3, BTC 517 Rock Hill, SC, 29730	JOB: US 21/ SC 51 Phase I Widening SUBJECT: Outlet Protection EP-2 CALC'D BY: PRJ DATE: 7-Jul-16 CHECK'D BY: SCN DATE: 24-Apr-17	1 SHEET OF 4

DETERMINE RIP RAP APRON QUANTITY

GIVEN:

Outlet Protection for Pipe @ Sta. 33+79 EP-2 Road Name US 21

From Charts - Length (L_a) = 65 ft.

Width 1 (W_1) = 3 * D_o = 15.0 ft. Pipe Size (D_o) = 60 "

Width 2 (W_2) = 40 ft.

SOLUTION:

From Riprap Apron Design Charts Determine d_{50} Riprap Size

SCDOT Riprap Class B (Round up to match SCDOT riprap class - see Table #1 below)

d_{50} = 0.75 ft. d_{max} = 1.33 ft.

Thickness (T) = 1.5 * d_{max} = 2.00 ft.

Volume of Riprap = L_a * 0.5(W_1 + W_2) * T = 3566.1 c.f.

Weight of Riprap = Vol. * (125 lbs./c.f.) / (2000 lbs./ton) = 222.88 Tons, use ===> **223 TONS**

DETERMINE GEOTEXTILE QUANTITY, TYPE, AND CLASS

SOLUTION:

Quantity of Geotextile

[L_a * 0.5(W_1 + W_2) + T(2L_a + W_1 + W_2)] / (9 s.f./s.y.) = 239.62 s.y., use ===> **240 SY**

SCDOT Geotextile Type C (see "Map of Recommended Geotextiles for Erosion Control")

SCDOT Geotextile Class 2 (In most cases will be Class 2; see SCDOT 2007 Specs., p.829)

Riprap Class	d_{50} Rock Size (ft.)	d_{max} (ft.)
A	0.50	0.75
B	0.75	1.33
C	1.30	1.80
D	1.80	2.25
E	2.25	2.85
F	2.85	3.60

TABLE #1: Riprap Class (From SCDOT 2007 Specs., P.825-826)

STV

STV Incorporated Consulting Engineers 454 S Anderson Rd, Suite 3, BTC 517 Rock Hill, SC, 29730	JOB: US 21/ SC 51 Phase I Widening SUBJECT: Outlet Protection EP-3 CALC'D BY: PRJ DATE: 7-Jul-16 CHECK'D BY: SCN DATE: 24-Apr-17	2 SHEET OF 4

DETERMINE RIP RAP APRON QUANTITY

GIVEN:

Outlet Protection for Pipe @ Sta. 41+06 EP-3 Road Name US 21

From Charts - Length (L_a) = 32 ft.

Width 1 (W_1) = 3 * D_o = 15.0 ft. Pipe Size (D_o) = 60 "

Width 2 (W_2) = 35 ft.

SOLUTION:

From Riprap Apron Design Charts Determine d_{50} Riprap Size

SCDOT Riprap Class C (Round up to match SCDOT riprap class - see Table #1 below)

d_{50} = 1.30 ft. d_{max} = 1.80 ft.

Thickness (T) = 1.5 * d_{max} = 2.70 ft.

Volume of Riprap = L_a * 0.5(W_1 + W_2) * T = 2160.0 c.f.

Weight of Riprap = Vol. * (125 lbs./c.f.) / (2000 lbs./ton) = 135.00 Tons, use ===> **135 TONS**

DETERMINE GEOTEXTILE QUANTITY, TYPE, AND CLASS

SOLUTION:

Quantity of Geotextile

[L_a * 0.5(W_1 + W_2) + T(2L_a + W_1 + W_2)] / (9 s.f./s.y.) = 123.09 s.y., use ===> **124 SY**

SCDOT Geotextile Type C (see "Map of Recommended Geotextiles for Erosion Control")

SCDOT Geotextile Class 2 (In most cases will be Class 2; see SCDOT 2007 Specs., p.829)

Riprap Class	d_{50} Rock Size (ft.)	d_{max} (ft.)
A	0.50	0.75
B	0.75	1.33
C	1.30	1.80
D	1.80	2.25
E	2.25	2.85
F	2.85	3.60

TABLE #1: Riprap Class (From SCDOT 2007 Specs., P.825-826)

STV

STV Incorporated Consulting Engineers 454 S Anderson Rd, Suite 3, BTC 517 Rock Hill, SC, 29730	JOB: US 21/ SC 51 Phase I Widening SUBJECT: Outlet Protection CLP-4 CALC'D BY: PRJ DATE: 7-Jul-16 CHECK'D BY: SCN DATE: 24-Apr-17	SHEET 3 OF 4

DETERMINE RIP RAP APRON QUANTITY

GIVEN:

Outlet Protection for Pipe @ Sta. 66+74 CLP-4 Road Name US 21

From Charts - Length (L_a) = 14 ft.

Width 1 (W_1) = 3 * D_o = 9.0 ft. Pipe Size (D_o) = 36 "

Width 2 (W_2) = 17 ft.

SOLUTION:

From Riprap Apron Design Charts Determine d_{50} Riprap Size

SCDOT Riprap Class B (Round up to match SCDOT riprap class - see Table #1 below)

d_{50} = 0.75 ft. d_{max} = 1.33 ft.

Thickness (T) = 1.5 * d_{max} = 2.00 ft.

Volume of Riprap = L_a * 0.5(W_1 + W_2) * T = 363.1 c.f.

Weight of Riprap = Vol. * (125 lbs./c.f.) / (2000 lbs./ton) = 22.69 Tons, use ===> **23 TONS**

DETERMINE GEOTEXTILE QUANTITY, TYPE, AND CLASS

SOLUTION:

Quantity of Geotextile

[L_a * 0.5(W_1 + W_2) + T(2L_a + W_1 + W_2)] / (9 s.f./s.y.) = 32.19 s.y., use ===> **33 SY**

SCDOT Geotextile Type C (see "Map of Recommended Geotextiles for Erosion Control")

SCDOT Geotextile Class 2 (In most cases will be Class 2; see SCDOT 2007 Specs., p.829)

Since we are combining the rip rap for use Type C riprap

Hydraulic Analysis Report
Side Road Outfalls Protection

Project Data

Project Title:

Designer:

Project Date: Friday, June 24, 2016

Project Units: U.S. Customary Units

Notes:

Riprap Analysis: CLP-8

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 1.6 cfs

Culvert Diameter: 1.5 ft

Normal Depth in Culvert: 0.29 ft

Tailwater Depth: 0 ft

If tailwater is unknown, use 0.4D

flow is sbcritical

Result Parameters

Tailwater Depth Used in Computations: 0.6 ft

Culvert Diameter Used in Computations: 1.5 ft

Computed D50: 0.430951 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 6 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 8.5 ft

No channel used in calculations

Riprap Analysis: EP-9

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 6.3 cfs

Culvert Diameter: 1.5 ft

Normal Depth in Culvert: 0.52 ft

Tailwater Depth: 0.53 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 0.53 ft

Culvert Diameter Used in Computations: 1.01 ft

Computed D50: 5.13993 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 6 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 7.03 ft

No channel used in calculations

Riprap Analysis: CLP-11

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 11.3 cfs

Culvert Diameter: 2 ft

Normal Depth in Culvert: 0.53 ft

Tailwater Depth: 0.44 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 0.506 ft

Culvert Diameter Used in Computations: 1.265 ft

Computed D50: 8.69043 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS II

Riprap Class Order: 2

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 18 in

d85: 13 in

d50: 9.5 in

d15: 7 in

Layout Recommendations

Apron Length: 8 ft

Apron Depth: 2.6125 ft

Apron Width (at end): 9.12833 ft

No channel used in calculations

Riprap Analysis: CLP-12

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 3.6 cfs

Culvert Diameter: 1.5 ft

Normal Depth in Culvert: 0.47 ft

Tailwater Depth: 0.48 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 0.48 ft

Culvert Diameter Used in Computations: 0.985 ft

Computed D50: 2.78263 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 6 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 6.955 ft

No channel used in calculations

Riprap Analysis: CLP-13

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 2.1 cfs

Culvert Diameter: 1.5 ft

Normal Depth in Culvert: 0.34 ft

Tailwater Depth: 0.47 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 0.47 ft

Culvert Diameter Used in Computations: 0.92 ft

Computed D50: 1.51712 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 6 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 6.76 ft

No channel used in calculations

Riprap Analysis: CLP-14

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 7.6 cfs

Culvert Diameter: 1.5 ft

Normal Depth in Culvert: 0.74 ft

Tailwater Depth: 0.76 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 0.76 ft

Culvert Diameter Used in Computations: 1.12 ft

Computed D50: 4.01041 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 6 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 7.36 ft

No channel used in calculations

Riprap Analysis: CLP-15

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 5 cfs

Culvert Diameter: 1.5 ft

Normal Depth in Culvert: 0.93 ft

Tailwater Depth: 0.47 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 0.486 ft

Culvert Diameter Used in Computations: 1.215 ft

Computed D50: 3.21931 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 6 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 7.645 ft

No channel used in calculations

Riprap Analysis: CLP-16

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 15 cfs

Culvert Diameter: 1.5 ft

Normal Depth in Culvert: 1.252 ft

Tailwater Depth: 0.8 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 0.8 ft

Culvert Diameter Used in Computations: 1.376 ft

Computed D50: 7.16828 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS II

Riprap Class Order: 2

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 18 in

d85: 13 in

d50: 9.5 in

STV Incorporated Consulting Engineers 454 S Anderson Rd, Suite 3, BTC 517 Rock Hill, SC, 29730	JOB: US 21/ SC 51 Phase I Widening SUBJECT: Outlet Protection CLP-8 CALC'D BY: PRJ DATE: 7-Jul-16 CHECK'D BY: SCN DATE: 24-Apr-17	1 SHEET OF 9

DETERMINE RIP RAP APRON QUANTITY

GIVEN:

Outlet Protection for Pipe @ Sta. 12+86 CLP-8 Road Name LAKESHORE

From Charts - Length (L_a) = 12 ft.

Width 1 (W_1) = 3 * D_o = 4.5 ft. Pipe Size (D_o) = 18 "

Width 2 (W_2) = 9 ft.

SOLUTION:

From Riprap Apron Design Charts Determine d_{50} Riprap Size

SCDOT Riprap Class B (Round up to match SCDOT riprap class - see Table #1 below)

d_{50} = 0.75 ft. d_{max} = 1.33 ft.

Thickness (T) = 1.5 * d_{max} = 2.00 ft.

Volume of Riprap = L_a * 0.5(W_1 + W_2) * T = 161.6 c.f.

Weight of Riprap = Vol. * (125 lbs./c.f.) / (2000 lbs./ton) = 10.10 Tons, use ===> **11 TONS**

DETERMINE GEOTEXTILE QUANTITY, TYPE, AND CLASS

SOLUTION:

Quantity of Geotextile

[L_a * 0.5(W_1 + W_2) + T(2L_a + W_1 + W_2)] / (9 s.f./s.y.) = 17.31 s.y., use ===> **18 SY**

SCDOT Geotextile Type C (see "Map of Recommended Geotextiles for Erosion Control")

SCDOT Geotextile Class 2 (In most cases will be Class 2; see SCDOT 2007 Specs., p.829)

Riprap Class	d_{50} Rock Size (ft.)	d_{max} (ft.)
A	0.50	0.75
B	0.75	1.33
C	1.30	1.80
D	1.80	2.25
E	2.25	2.85
F	2.85	3.60

SCDOT Geotextile Class 2 (In most cases will be Class 2; see SCDOT 2007 Specs., p.829)

Riprap Class	d_{50} Rock Size (ft.)	d_{max} (ft.)
A	0.50	0.75
B	0.75	1.33
C	1.30	1.80
D	1.80	2.25
E	2.25	2.85
F	2.85	3.60

TABLE #1: Riprap Class (From SCDOT 2007 Specs., P.825-826)

STV

STV Incorporated Consulting Engineers 454 S Anderson Rd, Suite 3, BTC 517 Rock Hill, SC, 29730	JOB: US 21/ SC 51 Phase I Widening SUBJECT: Outlet Protection CLP-14 CALC'D BY: SCN DATE: 7-Apr-21 CHECK'D BY: GPP DATE: 7-Apr-21	6 SHEET OF 9

DETERMINE RIP RAP APRON QUANTITY

GIVEN:

Outlet Protection for Pipe @ Sta. 17+23 Road Name OLD NATION ROAD

From Charts - Length (L_a) = 10 ft.

Width 1 (W_1) = 3 * D_o = 4.5 ft. Pipe Size (D_o) = 18 "

Width 2 (W_2) = 8 ft.

SOLUTION:

From Riprap Apron Design Charts Determine d_{50} Riprap Size

SCDOT Riprap Class B (Round up to match SCDOT riprap class - see Table #1 below)

d_{50} = 0.75 ft. d_{max} = 1.33 ft.

Thickness (T) = 1.5 * d_{max} = 2.00 ft.

Volume of Riprap = L_a * 0.5(W_1 + W_2) * T = 124.7 c.f.

Weight of Riprap = Vol. * (125 lbs./c.f.) / (2000 lbs./ton) = 7.79 Tons, use ===> **8 TONS**

DETERMINE GEOTEXTILE QUANTITY, TYPE, AND CLASS

SOLUTION:

Quantity of Geotextile

[L_a * 0.5(W_1 + W_2) + T(2L_a + W_1 + W_2)] / (9 s.f./s.y.) = 14.15 s.y., use ===> **15 SY**

SCDOT Geotextile Type C (see "Map of Recommended Geotextiles for Erosion Control")

SCDOT Geotextile Class 2 (In most cases will be Class 2; see SCDOT 2007 Specs., p.829)

Riprap Class	d_{50} Rock Size (ft.)	d_{max} (ft.)
A	0.50	0.75
B	0.75	1.33
C	1.30	1.80
D	1.80	2.25
E	2.25	2.85
F	2.85	3.60

TABLE #1: Riprap Class (From SCDOT 2007 Specs., P.825-826)

Hydraulic Analysis Report
System Outfalls Protection

Project Data

Project Title:

Designer:

Project Date: Monday, June 06, 2016

Project Units: U.S. Customary Units

Notes:

Riprap Analysis: outlet 1

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 18.448 cfs

Culvert Diameter: 2.5 ft

Normal Depth in Culvert: 0.62 ft

Tailwater Depth: 1 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 1 ft

Culvert Diameter Used in Computations: 1.56 ft

Computed D50: 6.39206 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 10 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 11.3467 ft

No channel used in calculations

Riprap Analysis: outlet 2

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 10.677 cfs

Culvert Diameter: 1.5 ft

Normal Depth in Culvert: 1.5 ft

Tailwater Depth: 0.6 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 0.6 ft

Culvert Diameter Used in Computations: 1.5 ft

Computed D50: 5.4142 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 6 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 8.5 ft

No channel used in calculations

Riprap Analysis: outlet 3

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 18.824 cfs

Culvert Diameter: 2.5 ft

Normal Depth in Culvert: 0.7 ft

Tailwater Depth: 1 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 1 ft

Culvert Diameter Used in Computations: 1.6 ft

Computed D50: 6.34839 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 10 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 11.4667 ft

No channel used in calculations

Riprap Analysis: outlet 4

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 10.198 cfs

Culvert Diameter: 2 ft

Normal Depth in Culvert: 0.92 ft

Tailwater Depth: 0.8 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 0.8 ft

Culvert Diameter Used in Computations: 1.46 ft

Computed D50: 3.95975 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 8 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 9.71333 ft

No channel used in calculations

Riprap Analysis: outlet 5

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 10.443 cfs

Culvert Diameter: 2 ft

Normal Depth in Culvert: 0.67 ft

Tailwater Depth: 0.8 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 0.8 ft

Culvert Diameter Used in Computations: 1.335 ft

Computed D50: 4.60514 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 8 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 9.33833 ft

No channel used in calculations

Riprap Analysis: outfall-EXOP-532

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 3.671 cfs

Culvert Diameter: 1.5 ft

Normal Depth in Culvert: 0.45 ft

Tailwater Depth: 0.6 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 0.6 ft

Culvert Diameter Used in Computations: 0.975 ft

Computed D50: 2.31613 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS I

Riprap Class Order: 1

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 12 in

d85: 9 in

d50: 6.5 in

d15: 4.5 in

Layout Recommendations

Apron Length: 6 ft

Apron Depth: 1.89583 ft

Apron Width (at end): 6.925 ft

No channel used in calculations

Riprap Analysis: outlet 7

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 33.4 cfs

Culvert Diameter: 3 ft

Normal Depth in Culvert: 1.447 ft

Tailwater Depth: 1.2 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 1.2 ft

Culvert Diameter Used in Computations: 2.2235 ft

Computed D50: 7.32778 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS II

Riprap Class Order: 2

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 18 in

d85: 13 in

d50: 9.5 in

d15: 7 in

Layout Recommendations

Apron Length: 12 ft

Apron Depth: 2.6125 ft

Apron Width (at end): 14.6705 ft

No channel used in calculations

Riprap Analysis: outlet 9

Notes:

Input Parameters

Riprap Type: Culvert Outlet Protection

Flow: 45.864 cfs

Culvert Diameter: 3.5 ft

Normal Depth in Culvert: 0.89 ft

Tailwater Depth: 1.4 ft

If tailwater is unknown, use 0.4D

flow is supercritical

Result Parameters

Tailwater Depth Used in Computations: 1.4 ft

Culvert Diameter Used in Computations: 2.195 ft

Computed D50: 9.75281 in

Riprap Class

Riprap shape should be angular

Riprap Class Name: CLASS III

Riprap Class Order: 3

The following values are an 'average' of the size fraction range for the selected riprap class.

d100: 24 in

d85: 17 in

d50: 12.5 in

STV Incorporated Consulting Engineers 454 S Anderson Rd, Suite 3, BTC 517 Rock Hill, SC, 29730	JOB: US 21/ SC 51 Phase I Widening SUBJECT: Outlet Protection Outfall-1 CALC'D BY: PRJ DATE: 7-Jul-16 CHECK'D BY: SCN DATE: 24-Apr-17	1 SHEET OF 20

DETERMINE RIP RAP APRON QUANTITY

GIVEN:

Outlet Protection for Pipe @ Sta. 41+29 Road Name US 21 (RT)

From Charts - Length (L_a) = 12 ft.

Width 1 (W_1) = 3 * D_o = 7.5 ft. Pipe Size (D_o) = 30 "

Width 2 (W_2) = 12 ft.

SOLUTION:

From Riprap Apron Design Charts Determine d_{50} Riprap Size

SCDOT Riprap Class B (Round up to match SCDOT riprap class - see Table #1 below)

d_{50} = 0.75 ft. d_{max} = 1.33 ft.

Thickness (T) = 1.5 * d_{max} = 2.00 ft.

Volume of Riprap = L_a * 0.5(W_1 + W_2) * T = 233.4 c.f.

Weight of Riprap = Vol. * (125 lbs./c.f.) / (2000 lbs./ton) = 14.59 Tons, use ===> **15 TONS**

DETERMINE GEOTEXTILE QUANTITY, TYPE, AND CLASS

SOLUTION:

Quantity of Geotextile

[L_a * 0.5(W_1 + W_2) + T(2L_a + W_1 + W_2)] / (9 s.f./s.y.) = 22.64 s.y., use ===> **23 SY**

SCDOT Geotextile Type C (see "Map of Recommended Geotextiles for Erosion Control")

SCDOT Geotextile Class 2 (In most cases will be Class 2; see SCDOT 2007 Specs., p.829)

Riprap Class	d_{50} Rock Size (ft.)	d_{max} (ft.)
A	0.50	0.75
B	0.75	1.33
C	1.30	1.80
D	1.80	2.25

STV Incorporated Consulting Engineers 454 S Anderson Rd, Suite 3, BTC 517 Rock Hill, SC, 29730	JOB: US 21/ SC 51 Phase I Widening SUBJECT: Outlet Protection Outfall-14 CALC'D BY: PRJ DATE: 7-Jul-16 CHECK'D BY: SCN DATE: 27-Apr-17	SHEET 12 OF 20

DETERMINE RIP RAP APRON QUANTITY

GIVEN:

Outlet Protection for Pipe @ Sta. 12+44 Road Name FLINT HILL ROAD (RT)

From Charts - Length (L_a) = 12 ft.

Width 1 (W_1) = 3 * D_o = 7.5 ft. Pipe Size (D_o) = 30 "

Width 2 (W_2) = 15 ft.

SOLUTION:

From Riprap Apron Design Charts Determine d_{50} Riprap Size

SCDOT Riprap Class B (Round up to match SCDOT riprap class - see Table #1 below)

d_{50} = 0.75 ft. d_{max} = 1.33 ft.

Thickness (T) = 1.5 * d_{max} = 2.00 ft.

Volume of Riprap = L_a * 0.5(W_1 + W_2) * T = 269.3 c.f.

Weight of Riprap = Vol. * (125 lbs./c.f.) / (2000 lbs./ton) = 16.83 Tons, use ===> **17 TONS**

DETERMINE GEOTEXTILE QUANTITY, TYPE, AND CLASS

SOLUTION:

Quantity of Geotextile

[L_a * 0.5(W_1 + W_2) + T(2L_a + W_1 + W_2)] / (9 s.f./s.y.) = 25.31 s.y., use ===> **26 SY**

SCDOT Geotextile Type C (see "Map of Recommended Geotextiles for Erosion Control")

SCDOT Geotextile Class 2 (In most cases will be Class 2; see SCDOT 2007 Specs., p.829)

Riprap Class	d_{50} Rock Size (ft.)	d_{max} (ft.)
A	0.50	0.75
B	0.75	1.33
C	1.30	1.80
D	1.80	2.25
E	2.25	2.85
F	2.85	3.60

TABLE #1: Riprap Class (From SCDOT 2007 Specs., P.825-826)

Division 10

York County Pennies for Progress
6 Congress Street, PO Box 148
York, SC 29745

SUBJECT: Non-Utility Encroachment Contract – Mecklenburg County – US-21 and SC-51 Improvements – US-21 (Carowinds Blvd) from SC-460 (Springfield Pkwy) to 700 ft. south of S-48 (Springhill Farm Rd) & SC-51 (Pineville-Rock Hill Rd) from US-21 (Carowinds Blvd) to the NC state line.

Encroachment Number: E102-060-23-00572

To Whom It May Concern:

A review of the subject encroachment has been completed by the appropriate staff agencies of the Division of Highways. Plans for construction at the above referenced location have been approved for construction at this time and are subject to the attached special provisions.

This encroachment involves roadway improvements and pavement markings along US-21 (Carowinds Blvd) and SC-51 (Pineville-Rock Hill Rd).
Please contact our District Office at (980) 523-0000 should additional information be needed.

Cordially,

York County Pennies For Progress
6 Congress Street, Post Office Box 148
York, SC 29745

RIGHT OF WAY ENCROACHMENT AGREEMENT FOR CURB AND GUTTER, PAVEMENT WIDENING AND STORM DRAINAGE

THIS AGREEMENT, made and entered into this the 2nd day of Aug , 20 23 , by and between the Department of Transportation, party of the first part; and York County Pennies for Progress party of the second part,

WITNESSETH

THAT WHEREAS, the party of the second part desires to encroach on the right of way of the public road designated as Route(s) NC Highway 51 (Pineville-Rock Hill Rd) , located at the North Carolina / South Carolina border

with the construction and/or erection of: roadway improvements

WHEREAS, it is to the material advantage of the party of the second part to effect this encroachment, and the party of the first part in the exercise of authority conferred upon it by statute, is willing to permit the encroachment within the limits of the right of way as indicated, subject to the conditions of this agreement;

NOW, THEREFORE, IT IS AGREED that the party of the first part hereby grants to the party of the second part the right and privilege to make this encroachment as shown on attached plan sheet(s), specifications and special provisions which are made a part hereof upon the following conditions, to wit:

That the said party of the second part binds and obligates himself to install the encroaching facility in such safe and proper condition that it will not interfere with or endanger travel upon said highway.

That the party of the second part agrees to provide during construction proper signs, signal lights, flagmen and other warning devices for the protection of traffic in conformance with the latest Manual on Uniform Traffic Control Devices for Streets and Highways and Amendments or Supplements thereto. Information as to the above rules and regulations may be obtained from the Division Engineer of the party of the first part.

That the party of the second part hereby agrees to indemnify and save harmless the party of the first part from all damages and claims for damage that may arise by reason of the installation and maintenance of this encroachment.

It is clearly understood by the party of the second part that the party of the first part will assume no responsibility for any damage that may be caused to such facilities, within the highway rights of way limits, in carrying out its construction.

That the party of the second part agrees to restore all areas disturbed during construction to the satisfaction of the Division Engineer of the party of the first part. The party of the second part agrees to exercise every reasonable precaution during construction and maintenance to prevent eroding of soil; silting or pollution of rivers, streams, lakes, reservoirs, other water impoundments, ground surfaces or other property; or pollution of the air. There shall be compliance with applicable rules and regulations of the North Carolina Division of Environmental Management, North Carolina Sedimentation Control Commission, and with ordinances and regulations of various counties, municipalities and other official agencies relating to pollution prevention and control. When any construction operation disturbs the ground surface and existing ground cover, the party of the second part agrees to remove and replace the sod or otherwise reestablish the grass cover to meet the satisfaction of the Division Engineer of the party of the first part.

That the party of the second part agrees to assume the actual cost of any inspection of the work considered to be necessary by the Division Engineer of the party of the first part.

That the party of the second part agrees to have available at the encroaching site, at all times during construction, a copy of this agreement showing evidence of approval by the party of the first part. The party of the first part reserves the right to stop all work unless evidence of approval can be shown.

Provided the work contained in this agreement is being performed on a completed highway open to traffic; the party of the second part agrees to give written notice to the Division Engineer of the party of the first part when all work contained herein has been completed. Unless specifically requested by the party of the first part, written notice of completion of work on highway projects under construction will not be required.

That in the case of noncompliance with the terms of this agreement by the party of the second part, the party of the first part reserves the right to stop all work until the facility has been brought into compliance or removed from the right of way at no cost to the party of the first part.

That it is agreed by both parties that this agreement shall become void if actual construction of the work contemplated herein is not begun within one (1) year from the date of authorization by the party of the first part unless written waiver is secured by the party of the second part from the party of the first part.

R/W (161B) : Party of the Second Part certifies that this agreement is true and accurate copy of the form

R/W (161B) incorporating all revisions to date.

IN WITNESS WHEREOF, each of the parties to this agreement has caused the same to be executed the day and year first above written.

DEPARTMENT OF TRANSPORTATION

DocuSigned by:

ATTEST OR WITNESS:

Assistant County Engineer

Second Party

INSTRUCTIONS

When the applicant is a corporation or a municipality, this agreement must have the corporate seal and be attested by the corporation secretary or by the empowered city official, unless a waiver of corporate seal and attestation by the secretary or by the empowered City official is on file in the Raleigh office of the State Utilities Manager. In the space provided in this agreement for execution, the name of the corporation or municipality shall be typed above the name, and title of all persons signing the agreement should be typed directly below their signature.

When the applicant is not a corporation, then his signature must be witnessed by one person. The address should be included in this agreement and the names of all persons signing the agreement should be typed directly below their signature.

This agreement must be accompanied, in the form of an attachment, by plans or drawings showing the following applicable information:

1. All roadways and ramps.
2. Right of way lines and where applicable, the control of access lines.
3. Location of the proposed encroachment.
4. Length and type of encroachment.
5. Location by highway survey station number. If station number cannot be obtained, location should be shown by distance from some identifiable point, such as a bridge, road, intersection, etc. (To assist in preparation of the encroachment plan, the Department's roadway plans may be seen at the various Highway Division Offices, or at the Raleigh office.)
6. Drainage structures or bridges if affected by encroachment.
7. Typical section indicating the pavement design and width, and the slopes, widths and details for either a curb and gutter or a shoulder and ditch section, whichever is applicable.
8. Horizontal alignment indicating general curve data, where applicable.
9. Vertical alignment indicated by percent grade, P.I. station and vertical curve length, where applicable.
10. Amount of material to be removed and/or placed on NCDOT right of way, if applicable.
11. Cross-sections of all grading operations, indicating slope ratio and reference by station where applicable.
12. All pertinent drainage structures proposed. Include all hydraulic data, pipe sizes, structure details and other related information.
13. Erosion and sediment control.
14. Any special provisions or specifications as to the performance of the work or the method of construction that may be required by the Department must be shown on a separate sheet attached to encroachment agreement provided that such information cannot be shown on plans or drawings.
15. The Department's Division Engineer should be given notice by the applicant prior to actual starting of installation included in this agreement.
16. Method of handling traffic during construction where applicable.
17. Scale of plans, north arrow, etc.

NCDOT PRECONSTRUCTION MEETING REQUEST FORM

Date: _____

Prior to beginning any work inside NCDOT ROW, this form must be completed and submitted to the inspectors listed below. Please allow 2-3 business days for a response by the appropriate inspector. Please note that this form must be completed and submitted to NCDOT prior to the pre-construction meeting.

Please submit this form to the following NCDOT Inspectors:

Elijah Hager- (980)250-08680 (ebhager1@ncdot.gov)

Carl Valente- (980) 323-0614 (cvalente@ncdot.gov)

Permit number: D102-060-23-00572

Project Name: US-21 and SC-51 Improvements

Construction start date: _____

Approximate ending date: _____

Requested Date & time: _____

Contractor's Information:

- **Name:** _____
- **Email:** _____
- **Phone Number:** _____

City/Town Inspector's Information:

- **Name:** _____
- **Email:** _____
- **Phone Number:** _____
- **City/Town:** _____

SPECIAL PROVISIONS

R/W 16.1B

ENCROACHING PARTY

E102-060-23-00572

Pre-Construction

Contact Offices & Outside Agency issues/contacts/info

1. Approval may be rescinded upon failure to follow any of the provisions in this permit and may be considered a violation of the encroachment agreement.

2. The encroachment applicant shall have one (1) year from the approval date as shown on the cover letter to begin construction. If work is not started within this one (1) year time period, the Encroachment Contract will become VOID, thus requiring written authorization from the District Engineer's office to proceed with construction.

3. The Encroaching party or their contractor shall provide the following notices prior to construction activity within the NCDOT Right of Way:
   - Three (3) business days advance phone call at telephone (980) 523-0000 or email to ebhager1@ncdot.gov and cvalente@ncdot.gov to the District Engineer's office.
   - If the construction falls within the limits of an NCDOT managed construction project, five (5) business days advance phone call to the Resident Engineer, Mr. Jon Hinson at (980) 523-0160 or email to jchinson@ncdot.gov.

   Failure to provide these notifications prior to beginning construction is subject to the Division Engineer's discretion to cease construction activity for this encroachment. NCDOT reserves the right to cease any construction or maintenance work associated with this installation by the encroaching party until the construction or maintenance meets the satisfaction of the Division Engineer or their representative.

4. The approval is subject to the project being constructed as shown on the approved plan and any attached revisions to the approved plans must be approved through **Kimberly Boik or Felix Obregon** with the NCDOT District Office.

5. Prior to beginning work, it is the requirement of the Encroaching Party to contact the appropriate Utility Companies involved and make arrangements to adjust or relocate any utilities that conflict with the proposed work.

6. It shall be the responsibility of the encroaching party to determine the location of utilities within the encroachment area. NCGS § 87-115 through § 87-130 of the Underground Utility Safety and Damage Prevention Act requires underground utilities to be located by calling 811 prior to construction. The encroaching party shall be responsible for notifying other utility owners and providing protection and safeguards to prevent damage or interruption to existing facilities and maintain access to them.

7. The encroaching party shall notify the appropriate municipal office prior to beginning any work within the municipality's limits of jurisdiction.

8. Excavation within 1000 feet of a signalized intersection will require notification by the encroaching party to NC-811 at telephone number 811 no less than one week prior to beginning work. All traffic signal or detection cables must be located prior to excavation by calling 811. Cost to replace or repair NCDOT signs, signals, pavement markings or associated equipment and facilities shall be the responsibility of the encroaching party.

9. This agreement does not authorize installations within nor encroachment onto railroad rights of way. Permits for installations within railroad right of way must be obtained from the railroad and are the responsibility of the encroaching party.

10. At the option of the District Engineer, a preconstruction meeting including representatives of NCDOT, the encroaching party, contractors, and municipality, if applicable, shall be required. A pre-construction conference held between a municipality (or other facility owner) and a contractor without the presence of NCDOT personnel with subsequent construction commencing may be subject to NCDOT personnel ceasing any work on NCDOT right-of-way related to this encroachment until such meeting is held. Contact the District office to schedule.

11. At the discretion of the District Engineer, a NOTIFICATION FOR UTILITY / NON-UTILITY ENCROACHMENT WITHIN NCDOT R/W form (See corresponding attachment) with the scheduled pre-construction meeting and associated construction schedule details must be completed and submitted to the District Engineer's office a minimum of one week prior to construction.

12. At the discretion of the District Engineer, the encroaching party (not the utility contractor) shall make arrangements to have a qualified inspector, under the supervision of a Professional Engineer registered in North Carolina, on site at all times during construction. The registered Professional Engineer shall be required to submit a signed and PE sealed certification that the utility was installed in accordance with the encroachment agreement.

Legal & Right-of-Way Issues

13. This approval and associated plans and supporting documents shall not be interpreted to allow any design change or change in the intent of the design by the Owner, Design Engineer, or any of their representatives. Any revisions or changes to these approved plans or intent for construction must be obtained in writing from the Division Engineer's office or their representative prior to construction or during construction if an issue arises during construction to warrant changes.

14. NCDOT does not guarantee the right of way on this road, nor will it be responsible for any claim for damages brought about by any property owner by reason of this installation. It is the responsibility of the encroaching party to verify the right of way.

15. Encroaching party shall be responsible for obtaining all necessary permanent and/or temporary construction, drainage, utility and/or sight distance easements.

16. All Right of Way and easements necessary for construction and maintenance shall be dedicated to NCDOT with proof of dedication furnished to the District Engineer prior to beginning work.

17. No commercial advertising shall be allowed within NCDOT Right of Way.

18. The encroaching party shall obtain proper approval from all affected pole owners prior to attachment to any pole.

19. The installation within the Control of Access fence shall not adversely affect the design, construction, maintenance, stability, traffic safety or operation of the controlled access highway, and the utility must be serviced without access from the through-traffic roadways or ramps.

20. No permission is given through the NCDOT permitting process to install items on NON-NCDOT maintained streets, private property, or railroad property.

21. Prior to the approval of any privately maintained facility within NCDOT right of way which the State of North Carolina is not the fee simple owner, written permission that each and every property owner affected by the installation shall be provided to NCDOT by the encroaching party.

Work Zone Traffic

22. WORK ZONE TRAFFIC CONTROL QUALIFICATIONS AND TRAINING PROGRAM

    All personnel performing any activity inside the highway right of way are required to be familiar with the NCDOT Maintenance / Utility Traffic Control Guidelines (MUTCG). No specific training course or test is required for qualification in the Maintenance /Utility Traffic Control Guidelines (MUTCG).

    All flagging, spotting, or operating Automated Flagger Assist Devices (AFAD) inside the highway right of way requires qualified and trained Work Zone Flaggers. Training for this certification is provided by NCDOT approved training resources and by private entities that have been pre-approved to train themselves.

    All personnel involved with the installation of Work Zone Traffic Control devices inside the highway right of way are required to be qualified and trained Work Zone Installers. Training for this certification is provided by NCDOT approved training resources and by private entities that have been pre-approved to train themselves.

    All personnel in charge of overseeing work zone Temporary Traffic Control operations and installations inside the highway right of way are required to be qualified and trained Work Zone Supervisors. Training for this certification is provided by NCDOT approved training resources and by private entities that have been pre-approved to train themselves.

    For questions and/or additional information regarding this training program please refer to https://connect.ncdot.gov/projects/WZTC/Pages/Training.aspx or call the NCDOT Work Zone Traffic Control Section (919) 814-5000.

23. The party of the second part shall employ traffic control measures that are in accordance with the prevailing federal, state, local, and NCDOT policies, standards, and procedures. These policies, standards, and procedures include, but are not limited to the following:
    - Manual on Uniform Traffic Control Devices (MUTCD) – North Carolina has adopted the MUTCD to provide basic principles and guidelines for traffic control device design, application, installation, and maintenance. North Carolina uses the MUTCD as a minimum requirement where higher supplemental standards specific to North Carolina are not established. Use fundamental principles and best practices of MUTCD (Part 6, Temporary Traffic Control).
    - NCDOT Maintenance / Utility Traffic Control Guidelines – This document enhances the fundamental principles and best practices established in MUTCD Part 6, Temporary Traffic Control, incorporating NCDOT-specific standards and details. It also covers important safety knowledge for a wide range of work zone job responsibilities.
    - *NCDOT Roadway Standard Drawings and Standard Specifications for Roads and Structures* and amendments or supplements thereto. When there is no guidance provided in the *NCDOT Roadway Standard Drawings and Standard Specifications for Roads and Structures*, comply with the *Manual on Uniform Traffic Control Devices for Streets and Highways* and amendments or supplements thereto. Information as to the above rules and regulations may be obtained from the NCDOT Division Engineer.

24. If the Traffic Control Supervisor determines that portable concrete barrier (PCB) is required to shield a hazard within the clear zone, then PCB shall be designed and sealed by a licensed North Carolina Professional Engineer. PCB plans and design calculations shall be submitted to the District Engineer for review and approval prior to installation.

25. Ingress and egress shall be maintained to all businesses and dwellings affected by the project. Special attention shall be paid to police, EMS and fire stations, fire hydrants, secondary schools, and hospitals.

26. Traffic shall always be maintained. All lanes of traffic are to be open during the hours of 6:00 A.M. to 9:00 A.M. and from 4:00 P.M. to 6:00 P.M. Monday through Friday, during any time of inclement weather, **or as directed by the District Engineer per the approval letter**. Any violation of these hours will result in ceasing any further construction by the Encroaching Party or their contractor.

27. If the construction is within 1000 feet of a school location or on a designated bus route, the construction shall be coordinated with the school start and end times to avoid traffic delays.

28. Work hours may be modified by the District Engineer or designee if installation causes traffic problems. If nighttime or weekend work is allowed or required, all signs must be retro-reflective, and a work zone lighting plan must be submitted for approval prior to construction.

29. Two-way traffic shall be maintained at all times unless designated by the District Engineer. Traffic shall not be rerouted or detoured without the prior written approval from the District Engineer. No utility work will be allowed on state holidays from 7:00 PM the night before through 9:00 AM the day prior to, following or during local events without prior approval from the District Engineer. If the construction is within 1000 feet of a school location or on a designated bus route, the construction shall be coordinated with the school start and end times to avoid traffic delays.

30. **ADDITIONAL NCDOT HOLIDAY LANE CLOSING RESTRICTIONS** are as follows:
    - **New Year's:** From 4pm, Dec. 31, until 9am, Jan. 2. If New Year's Day is on a Friday, Saturday, Sunday or Monday, then until 9am the following Tuesday.
    - **Easter:** From 4pm, Thursday before the holiday until 6pm the Monday after holiday.
    - **Memorial Day:** From 4pm, Friday, until 9am Tuesday.
    - **Independence Day:** From 4pm on the day before holiday, until 9am on the day after. If the holiday lands on a Friday, Saturday, Sunday or Monday, then there will be no lane closures from 4pm on the Thursday before until 9am the Tuesday after.
    - **Labor Day:** From the hours of 4pm, Friday until 9am Tuesday.
    - **Thanksgiving:** From 4pm, Tuesday until 9am Monday.
    - **Christmas:** From 4pm the Friday before the week of Christmas Day, until 9am the following Tuesday after the week of Christmas Day.

31. No lane closures shall be allowed on days or times in which special events are occurring in the area which may include but not be limited to CIAA and ACC Tournaments, NASCAR races, soccer games, stadium events, college graduations, move-ins and sporting events, plus Panthers, Knights and Hornets games. The time restrictions, including the requirement to perform work within the roadway at night, will be adjusted by the Engineer or Inspector for that project. Further restrictions may also be required depending on the size and location of the event.

32. Work requiring lane or shoulder closures shall not be performed on both sides of the road simultaneously within the same area.

33. Any work requiring equipment or personnel within 5 feet of the edge of any travel lane of an undivided facility and within 10 feet of the edge of any travel lane of a divided facility shall require a lane closure with appropriate tapers per current *NCDOT Roadway Standard Drawings or MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES*.

34. At the discretion of the District Engineer, a traffic control plan shall be developed and submitted under the seal and signature of a Licensed North Carolina Professional Engineer prior to construction. The plan shall be specific to the site and adequately detailed. Issues such as the proximity to intersections shall be addressed.

35. Temporary and final pavement markings are the responsibility of the encroaching party. Final pavement markings and sign plans shall be submitted with the encroachment request to the Division Traffic Engineer prior to construction. Final pavement markings shall be thermoplastic unless otherwise directed by the Division Traffic Engineer or District Engineer.

36. Any pavement markings that are damaged or obliterated shall be restored by the encroaching party at no expense to NCDOT.

37. Sidewalk closures shall be installed as necessary. Pedestrian traffic shall be detoured around these closures and shall be signed appropriately and in accordance with The American with Disabilities Act Accessibility Guidelines. The encroaching party must adhere to the guidelines for accommodating pedestrians in encroachment work zones as described in the NCDOT Pedestrian Work Zone Accommodations Training found at https://www.youtube.com/watch?v=AOuYa5IW3dg&feature=youtu.be

Roadside Environmental

38. The encroaching party shall comply with all applicable Federal, State and local environmental regulations and shall obtain all necessary Federal, State and local environmental permits, including but not limited to, those related to sediment control, stormwater, wetland, streams, endangered species and historical sites. Additional information can be obtained by contacting the NCDOT Roadside Environmental Engineer regarding the North Carolina Natural Heritage Program or the United States Fish and Wildlife Services. Contact the Division Roadside Environmental Engineer's Office at (704) 244-8260.

39. It is the responsibility of the encroaching party to secure any needed environmental permits and/or authorizations prior to beginning construction. Permit authorizations from the US Army Corps of Engineers Asheville Regulatory Field Office, (828) 271-7980, and the NC Division of Water Quality Mooresville Regional Office, (704) 663-1699, are required for any stream or wetland impacts. If you, or your representative, determine that no permits or authorizations are needed, attach a letter of verification to the encroachment application stating such.

40. When surface area in excess of one acre will be disturbed, the Encroacher shall submit a Sediment and Erosion Control Plan which has been approved by the appropriate regulatory agency or authority prior to beginning any work on the Right of Way. Failure to provide this information shall be grounds for suspension of operations. Proper temporary and permanent measures shall be used to control erosion and sedimentation in accordance with the approved sediment and erosion control plan.

41. The Verification of Compliance with Environmental Regulations (VCER-1) form is required for all non-utility encroachment agreements or any utility encroachments when land disturbance within NCDOT right of way exceeds 1 acre. The VCER-1 form must be PE sealed by a NC registered professional engineer who has verified that all appropriate environmental permits (if applicable) have been obtained and all applicable environmental regulations have been followed.

42. All erosion control devices and measures shall be constructed, installed, maintained, and removed by the Encroacher in accordance with all applicable Federal, State, and Local laws, regulations, ordinances, and policies. Permanent vegetation shall be established on all disturbed areas in accordance with the recommendations of the Division Roadside Environmental Engineer. All areas disturbed (shoulders, ditches, removed accesses, etc.) shall be graded and seeded in accordance with the latest *NCDOT Standards Specifications for Roads and Structures* and within 15 calendar days with an approved NCDOT seed mixture (all lawn type areas shall be maintained and reseeded as such). Seeding rates per acre shall be applied according to the Division Roadside Environmental Engineer. Any plant or vegetation in the NCDOT planted sites that is destroyed or damaged as a result of this encroachment shall be replaced with plants of like kind or similar shape.

43. No trees within NCDOT shall be cut without authorization from the Division Roadside Environmental Engineer. An inventory of trees measuring greater than 4 caliper inches (measured 6" above the ground) is required when trees within C/A right of way will be impacted by the encroachment installation. Mitigation is required and will be determined by the Division Roadside Environmental Engineer's Office.

44. Prior to installation, the Encroaching Party shall contact the District Engineer to discuss any environmental issues associated with the installation to address concerns related to the root system of trees impacted by boring or non-utility construction of sidewalk, roadway widening, etc.

45. The applicant is responsible for identifying project impacts to waters of the United States (wetlands, intermittent streams, perennial streams and ponds) located within the NCDOT right-of-way. The discharge of dredged or fill material into waters of the United States requires authorization from the United States Army Corps of Engineers

(USACE) and certification from the North Carolina Division of Water Quality (NCDWQ). The applicant is required to obtain pertinent permits or certification from these regulatory agencies if construction of the project impacts waters of the United States within the NCDOT right-of-way. The applicant is responsible for complying with any river or stream Riparian Buffer Rule as regulated by the NCDWQ. The Rule regulates activity within a 50-foot buffer along perennial streams, intermittent streams and ponds. Additional information can be obtained by contacting the NCDWQ or the USACE.

46. The contractor shall not begin the construction until after the traffic control and erosion control devices have been installed to the satisfaction of the Division Engineer or their agent.

47. The contractor shall perform all monitoring and record keeping and any required maintenance of erosion and sediment control measures to maintain compliance with stormwater regulations.

48. It should be noted that there are federally protected plant species found within the Department of Transportation rights of way. While the department makes every effort to assure that these roadside populations are identified by posting "Do Not Mow" signs, it is the responsibility of the encroaching party to assure that these populations remain undisturbed. Assistance with threatened and endangered species issues can be obtained through the US Fish and Wildlife Service Asheville Field Office, (828) 258-3939.

Construction

General

49. An executed copy of the encroachment agreement, provisions and approved plans shall be present at the construction site at all times. If safety or traffic conditions warrant such an action, NCDOT reserves the right to further limit, restrict or suspend operations within the right of way.

50. The Encroaching Party and/or their Contractor shall comply with all OSHA requirements. If OSHA visits the work area associated with this encroachment, the District Office shall be notified by the encroaching party immediately if any violations are cited.

51. All materials and workmanship shall conform to the *NCDOT Standards and Specifications for Roads and Structures*.

52. Strict compliance with the *Policies and Procedures for Accommodating Utilities on Highway Rights of Way* manual shall be required.

53. Any REVISIONS marked in RED on the attached non-PE sealed plans shall be incorporated into and made part of the approved encroachment agreement.

54. The attached plans reflect the corrections and revisions as coordinated with the NCDOT Encroachment Review Unit of the District Office.

55. All disturbed areas are to be fully restored to current NCDOT minimum roadway standards or as directed by the Division Engineer or their representative. Disturbed areas within NCDOT Right-of-Way include, but not limited to, any excavation areas, pavement removal, drainage or other features.

56. Any pavement, curb and gutter, handicap ramps, or concrete sidewalk replacement/repair required due to this installation shall be the responsibility of the encroaching party and shall be completely restored within 7-days of final construction. All repairs or replacements shall be in accordance with the requirements of and to the satisfaction of the District Engineer.

57. The encroaching party shall notify the Division Engineer or their representative immediately in the event any drainage structure is blocked, disturbed or damaged. All drainage structures disturbed, damaged or blocked shall be restored to its original condition as directed by the Division Engineer or their representative.

58. Unless specified otherwise, during non-working hours, equipment shall be located away from the job site or parked as close to the right of way line as possible and be properly barricaded in order not to have any equipment obstruction within the Clear Recovery Area. Also, during non-working hours, no parking or material storage shall be allowed along the shoulders of any state-maintained roadway.

59. Guardrail removed or damaged during construction shall be replaced or repaired to its original condition, meeting current NCDOT standards or as directed by the Division Engineer or their representative.

60. The resetting of the Control of Access fence shall be in accordance with the applicable NCDOT standard and as directed by the Division Engineer or their representative.

61. Right of Way monuments disturbed during construction shall be referenced by a registered Land Surveyor and reset after construction.

62. All Traffic signs moved during construction shall be reinstalled as soon as possible to the satisfaction of the Division Engineer or their representative.

63. Any utility markers, cabinets, pedestals, meter bases and services for meter reading required shall be as close to the Right of Way line as possible. If it is not feasible to install at or near Right of Way line, then written approval shall be obtained from NCDOT prior to installation.

64. All driveways disturbed during construction shall be returned to a state comparable with the condition of the driveways prior to construction.

65. If the approved method of construction is unsuccessful and other means are required, prior approval must be obtained through the District Engineer before construction may continue.

Engineering

66. All traffic control, asphalt mixes, structures, construction, workmanship and construction methods, and materials shall be in compliance with the most-recent versions of the following resources: *ASTM Standards*, *Manual on Uniform Traffic Control Devices, NCDOT Utilities Accommodations Manual, NCDOT Standard Specifications for Roads and Structures, NCDOT Roadway Standard Drawings,* NCDOT *Asphalt Quality Management System* manual, **and the approved plans.**

67. Prior approval for any blasting must be obtained from the Division Engineer or their representative.

Location within R/W

68. All utility access points, such as manholes, vaults, handholes, splice boxes and junction boxes shall be located as close to the right of way line as possible and shall not be placed in the ditch line, side slopes of the ditches or in the pavement. All manholes, handholes, splice boxes, junction boxes and vaults and covers shall be flush with the ground when located within the vehicle clear zone. Slack loops for telecommunications in industry standard housing units shall be buried a minimum of 18 inches when buried or meet minimum NCDOT vertical and horizontal clearances when installed aerially.

69. Fire Hydrants shall be of the breakaway type. Hydrants shall be placed near the right of way line. In curb and gutter sections with written approval from the District, the hydrants may be placed at 6' behind the back of the curb or minimum 2' back of sidewalk.

70. Luminaire and/or utility poles and guy wires shall be set as close to the Right of Way line as practical and outside the Clear Zone in accordance with the latest version of the AASHTO Roadside Design Guide (See corresponding attachment) or made breakaway in accordance with the requirements of NCHRP Report 350. Any relocation of the utility poles from the original design due to Clear Zone requirements shall require a re-submittal for the utility design.

71. Luminaire and/or utility poles shall be set a minimum of 5'-6" behind face of any guardrail or otherwise sufficiently protected. However, standard placement may be reduced to 3'-6" behind face of guardrail when posts are spaced 3'-1 ½", or where speed limit is less than 55 MPH..

Excavation

72. Excavation material shall not be placed on pavement.

73. Trenching, bore pits and/or other excavations shall not be left open or unsafe overnight.

74. It is the responsibility of the encroaching party or their contractor to prevent any mud/dirt from tracking onto the roadway. Any dirt which may collect on the roadway pavement from equipment and/or truck traffic on site shall be immediately removed to avoid any unsafe traffic conditions.

Paving

75. The paving of this roadway shall be in accordance with the latest version of NCDOT Standard Specifications, Sections 610, 1012 and 1020. The Contractor shall follow all procedures of the Quality Management System (QMS) for asphalt pavement - Maintenance Version (see https://connect.ncdot.gov/resources/Materials/MaterialsResources/2018%20QMS%20Asphalt%20Manual.pdf). The Contractor must adhere to all testing requirements and quality control requirements specified. The Contractor shall contact the NCDOT Division QA Supervisor prior to producing plant mix and make the Supervisor aware that the mix is being produced for a future NCDOT road. Contact the District Engineer to determine the NCDOT Division QA Supervisor. Only NCDOT approved mix designs will be acceptable. A Quality Control Plan shall be submitted (as Directed by the District Engineer) to the District Engineer's Office prior to asphalt production utilizing form QMS-MV1. Failing mixes and/or densities are subject to penalties including monetary payments or removal and replacement. To minimize traffic queuing in construction areas, the possibility of traffic detours may be considered when working on high traffic routes even if traffic control is used. The District Engineer may require traffic detours.

76. "Potholing" pavement cores to expose existing utilities shall be made with an 18" diameter keyhole pavement core. Pavement core locations shall not be placed in the wheel path whenever possible. Vacuum excavation shall be utilized to expose underground utilities. Pavement cores shall be repaired within the same working day. The pavement core shall be retained and reused to fill the core hole.

    The excavation shall be backfilled and compacted with select material to the bottom of the existing pavement structure or as indicated by the District Engineer. The retained core shall be placed in the hole and secured with a waterproof, mechanical joint. If the pavement core is damaged and cannot be re-used, the core may be replaced with the surface mix, S9.5C. The asphalt patch shall match the thickness of the existing asphalt or four inches, whichever is greater. All materials must be listed on the NCDOT Approved Products List (APL) found at: https://apps.ncdot.gov/vendor/approvedproducts/.

77. The minimum pavement design for pavement repair shall be according to NCDOT Standard Drawing 654.01 (https://connect.ncdot.gov/resources/Specifications/2018StandardRdwyDrawings/Division%2006%20Asphalt%20Bases%20and%20Pavements.pdf) and shall include a mechanical overlay extent to be a minimum of 25 feet each side of the pavement repair area OR as directed by the District Engineer.

78. Pavement cuts shall be repaired the same day the cuts are made unless an asphalt patch cannot be accomplished the same day due to material availability or time restrictions. When the asphalt patch is not feasible, the following apply:
    - The pavement cut shall be filled to the surface with ABC stone or Flowable Fill per NCDOT's Standards and Specifications.
    - Once the cut is filled, a minimum ¾-inch steel plate shall be placed and pinned to prevent moving. Plates shall be designed large enough to span a minimum of 1-foot on all sides on the pavement cut.
    - When flowable fill is used, it shall cure for 24 hours prior to any asphalt material placement. Flowable fill bleed water shall not be present during paving operations. Paving shall not cause damage (shoving, distortion, pumping, etc.) to the flowable fill.
    - Install and leave "BUMP" signs according to MUTCD until the steel plate has been removed. Once the flowable fill has cured, remove the steel plate, and mill/fill according to the directions of the District Engineer.
    - All pavement cuts must be sealed with NCDOT approved sealant to prevent future pavement separation or cracking.

79. Any pavement damaged because of settlement of the pavement or damaged by equipment used to perform encroachment work, shall be re-surfaced to the satisfaction of the District Engineer. This may include the removal of pavement and a 50' mechanical overlay. All pavement work and pavement markings (temporary and final) are the responsibility of the Encroaching Party.

Post Construction

Close out/ Inspection

80. The Encroaching party shall notify the District Engineer's office within 2 business days after construction is complete. The District Engineer may perform a construction inspection. Any deficiencies may be noted and reported to the encroaching party to make immediate repairs or resolve any issues to restore the right-of-way to a similar condition prior to construction, including pavement, signage, traffic signals, pavement markings, drainage, structures/pipes, or other highway design features.

81. At the discretion of the District Engineer, a final inspection report may be provided to the encroaching party upon satisfactory completion of the work.

82. A written acknowledgement of the completed work by the District Engineer's office begins the one-year warranty period associated with the performance bond.

83. If the actual construction differs from the approved plans associated with this encroachment, a copy of "as-built" plans shall be submitted to the District Engineer's office in a PDF format and in a current ESRI GIS format within 4 weeks of construction.

Complete restoration including fertilizing, seeding, and mulching of all areas disturbed during construction will follow within a maximum of fifteen (15) working days of the initial disturbing activity.

Grass cover to be established on all disturbed areas in accordance with recommendations of the Division Roadside Environmental engineer.

500# FERTILIZER	25# KOBE OR KOREAN LESPEDEZA
400# LIMESTONE	500# FERTILIZER
	400# LIMESTONE

On cut and fill slopes 2:1 or steeper add 25# Rye Grain November 1 through March 1.

On cut and fill slopes 2:1 or steeper add 30# Sericea Lespedeza January 1 through December 1.

Fertilizer shall be 10-20-20 analysis. Upon written approval of the Engineer, a difference analysis of fertilizer may be used provided the 1-2-2 ratio is maintained and the rate of application adjusted to provide the same amount of plant food as a 10-20-20 analysis.

River Birches will not be planted near storm or sanitary sewers as roots will intrude at pipe joints.

VERIFICATION OF COMPLIANCE WITH ENVIRONMENTAL REGULATIONS

(Check Appropriate Box)

☐ Permits from the N.C. Department of Environment and Natural Resources and the U.S. Army Corp of Engineers are not required for this project. However, all applicable federal and state regulations have been followed.

☐ The required permits from the ~~N.C.~~ S.C. Department of ~~Environment and Natural Resources~~ Health and Environmental Control and the U.S. Army Corp of Engineers have been obtained for this project. Copies of permits and Completion Certificates are attached.

☐ All applicable NPDES Stormwater Permit requirements have been met for this project. (The applicant should contact the N.C. Division of Water Quality in Raleigh to determine if a stormwater permit is required.)

☐ The project is in compliance with all applicable sedimentation and erosion control laws and regulations.

Water Supply Construction Permit
Bureau of Water

S.C. Department of Health and Environmental Control

Permission is Hereby Granted To: **FERN FOREST RURAL WATER CO**
141 AMELIA DR
FORT MILL SC 29715

for the construction of a distribution system in accordance with the construction plans, specifications, design calculations and the SCDHEC Construction Permit Application signed by Andrew S Vane, Professional Engineer, S.C. Registration Number: 19911.

Project Name: **FERN FOREST WATER SYSTEM IMPROVEMENTS**

County: York

Location: US HIGHWAY 21 BETWEEN FERN FOREST COURT AND FOREST DRIVE, FORT MILL, SC

Project Description: Relocating approximately 565 LF-3"PVC water line in areas of conflict with proposed storm drainage system along US Hwy 21.

Service By: Water will be provided by the Fern Forest MHP (System Number: 4660001).

Special Conditions:
1. All construction and materials for this project must conform to the Standard Specifications for York County.

In accepting this permit, the owner agrees to the admission of properly authorized persons at all reasonable hours for the purpose of sampling and inspection.

NOTE: This is a permit for construction only and does not constitute State Department of Health and Environmental Control approval, temporary or otherwise, to place the system in operation. No written approval shall be issued to place a drinking water project into operation until approval is obtained to place any associated wastewater project into operation. An Approval to Place in Operation is required and can be obtained following the completion of construction by contacting the LANCASTER EQC OFFICE at 803-285-7461. Additional permits may be required prior to construction (e.g., stormwater).

Permit Number: **37283-WS**
Date of Issue: **January 09, 2024**
Expiration Date: Construction must be completed and the Approval to Place in Operation granted prior to **January 09, 2027** or this permit will expire.

WATER/SEWER GENERAL NOTES

1. FIRE HYDRANTS SHALL BE YORK COUNTY STANDARD.
2. ALL WATER MAIN VALVES MUST OPEN COUNTERCLOCKWISE IN CONFORMANCE WITH YORK COUNTY STANDARDS.
3. BLOCKING SHALL BE INSTALLED AT ALL BENDS, TEES, VALVES, REDUCERS, BLOW-OFFS, AND HYDRANT LOCATIONS, UNLESS ALTERNATIVES ARE SHOWN ON DETAILS.
4. WATER MAINS LESS THAN 4 INCH IN DIAMETER SHALL BE PVC ASTM D2241 SDR 13.5, CLASS 315. ALL MAINS 4 INCH TO 12 INCH SHALL BE AWWA C-900 PRESSURE CLASS 200 PVC SDR14. FITTINGS LESS THAN 4 INCH SHALL BE SLIP JOINT PVC PER SPECIFICATIONS. PVC PIPING SHALL BE INSTALLED WITH APPROVED COPPER LOCATING WIRE.
5. ASBESTOS CEMENT PIPE SHALL NOT BE USED IN POTABLE WATER SYSTEMS.
6. DIP SHALL BE IN ACCORDANCE WITH AWWA C150/A21.50 & AWWA C151/A21.51
7. NO FLUSHING DEVICE SHALL BE DIRECTLY CONNECTED TO ANY SEWER SYSTEM.
8. CHAMBERS, PITS OR MANHOLES CONTAINING VALVES, BLOW-OFFS, METERS, AIR RELIEF VALVES OR OTHER SUCH APPURTENANCES TO A POTABLE WATER DISTRIBUTION SYSTEM, SHALL NOT BE CONNECTED DIRECTLY TO ANY STORM DRAIN OR SANITARY SEWER.
9. INSTALLATION OF WATER MAINS AND APPURTENANCES SHALL BE CONDUCTED IN ACCORDANCE SECTION C OF THE AWWA STANDARDS AND/OR MANUFACTURER?S RECOMMENDED INSTALLATION PROCEDURES.
10. A CONTINUOUS AND UNIFORM BEDDING SHALL BE PROVIDED IN THE TRENCH FOR ALL BURIED PIPE. BACK-FILL MATERIAL SHALL BE TAMPED IN LAYERS AROUND THE PIPE AND TO A SUFFICIENT HEIGHT ABOVE THE PIPE TO ADEQUATELY SUPPORT AND PROTECT THE PIPE. STONES, OTHER THAN CRUSHED BEDDING, SHALL NOT COME INTO CONTACT WITH THE PIPE AND SHALL NOT BE WITHIN SIX (6) INCHES OF THE PIPE.
11. ALL WATER MAINS SHALL MEET THE YORK COUNTY WATER SPECIFICATIONS FOR PIPE WARNING TAPE AND TRACING WIRE. REFER TO YORK COUNTY WATER & SEWER STANDARDS TECHNICAL SPECIFICATIONS SECTION 33 05 05, SECTION 2.2 FOR PROPER INSTALLATION.
12. A "W" MUST BE ETCHED INTO THE CURBING SHOWING THE LOCATION OF WATER METERS.
13. A "V" MUST BE ETCHED INTO THE CURBING SHOWING THE LOCATION OF VALVES.
14. VALVES CANNOT BE LOCATED IN SIDEWALKS, CURBING, DIRVEWAYS, OR ASPHALT AREAS.
15. REFER TO YORK COUNTY STANDARD SPECIFICATIONS AND DETAILS REGARDING SERVICE LINE MATERIAL.
16. ALL SERVICE LINES REQUIRE INDIVIDUAL CONNECTIONS TO THE MAIN. MULTIPLE SERVICE LINES INTERCONNECTING WILL NOT BE ALLOWED.
17. WATER MAINS WHICH HAVE BEEN PREVIOUSLY USED FOR CONVEYING POTABLE WATER MAY BE REUSED PROVIDED THEY MEET APPLICABLE CRITERIA FROM AWWA SECTION C, ANSI/NSF 61 AND ASTM D1785 OR D2241. THE MAINS MUST BE THOROUGHLY CLEANED AND RESTORED PRACTICALLY TO THEIR ORIGINAL CONDITION.
18. THERMOPLASTIC PIPE SHALL NOT BE USED ABOVE GRADE.
19. NATURAL RUBBER OR OTHER MATERIAL WHICH WILL SUPPORT MICROBIOLOGICAL GROWTH MAY NOT BE USED FOR ANY GASKETS, O-RINGS, AND OTHER PRODUECTS USED FOR JOINTING PIPES, SETTING METERS OR VALVES, OR OTHER APPURTENANCES WHICH WILL EXPOSE THE MATERIAL TO THE WATER.
20. LUBRICANTS WHICH WILL SUPPORT MICROBIOLOGICAL GROWTH SHALL NOT BE USED FOR SLIP-ON JOINTS.
21. THE USE OF VEGETABLE SHORTENING TO LUBRICATE JOINTS IS PROHIBITED.
22. THE USE OF SOLVENT-WELD PVC PIPE AND FITTINGS IN WATER MAINS 4 INCHES AND LARGER IS PROHIBITED.
23. AT NO TIME SHALL A POTABLE WATER LINE PASS THROUGH OR COME INTO CONTACT WITH ANY PART OF A SEWER MANHOLE.
24. AIR RELIEF VALVES SHALL BE PROVIED IN ACCORDANCE WITH SOUND ENGINEERING PRACTICE AT HIGH POINTS IN WATER MAINS AS REQUIRED. AUTOMATIC AIR RELIEF VALVES SHALL NOT BE USED IN SITUATIONS WHERE FLOODING OF THE INSTALLATION MANHOLE OR CHAMBER MAY OCCUR.
25. BLOW-OFFS SHOULD NOT BE DIRECTED TOWARDS ROADS OR SO THAT THE WATER FROM THE BLOW-OFF FLOWS INTO CREEKS, STREAMS, ETC... DIRECT BLOW-OFFS AT STREAM CROSSINGS AWAY FROM THE STREAM.
26. USE DIP WITH MECHANICAL JOINTS FOR ANY LINES BEING INSTALLED IN ROCK.
27. ANY PIPE, SOLDER, OR FLUX WHICH IS USED IN THE INSTALLATION OR REPAIR OF ANY PUBLIC WATER SYSTEM, USED IN ANY PLUMBING WHICH PROVIDES WATER THROUGH CONNECTION TO A PUBLIC WATER SYSTEM, FOR HUMAN CONSUMPTION, SHALL BE LEAD FREE. LEAD FREE, FOR SOLDER AND FLUX, MEAN THOSE CONTAINING NOT MORE THAN 0.2% LEAD. LEAD FREE, FOR PIPES AND PIPE FITTINGS, AS THOSE CONTAINING NOT MORE THAN 8.0% LEAD. LEADED JOINTS NECESSARY FOR THE REPAIR OF CIP SHALL BE EXEMPT FROM THE ABOVE.
28. THERE SHALL BE NO CONNECTION BETWEEN THE DISTRIBUTIONS SYSTEM AND ANY PIPES, PUMPS, HYDRANTS, OR TANKS WHEREBY UNSAFE WATER OR OTHER CONTAMINATION MATERIALS MAY BE DISCHARGED OR DRAWN INTO THE SYSTEM. NO BY-PASSES SHALL BE ALLOWED, UNLESS THE BYPASS IS ALSO EQUIPPED WITH AN EQUAL, APPROVED BACK-FLOW DEVICE.
29. REDUCED PRESSURE PRINCIPLE BACKFLOW PREVENTION ASSEMBLIES SHALL NOT BE INSTALLED IN ANY AREA LOCATION SUBJECT TO POSSIBLE FLOODING.
30. ALL PIPING UP TO THE INLET OF THE BACKFLOW PREVENTION DEVICE MUST BE SUITABLE FOR POTABLE WATER. THE PIPE MUST BE AWWA OR NSF APPROVED. BLACK STEEL PIPE CANNOT BE USED ON THE INLET SIDE OF THE DEVICE.
31. FIRE LINE SPRINKLERS AND DEDICATED FIRE LINES, EXCEPT THOSE IN THE HIGH HAZARD CATEGORY, SHALL BE PROTECTED BY AN APPROVED DOUBLE CHECK VALVE ASSEMBLY.

PROJECT SPECIFIC NOTES

1. CONTRACTOR SHALL COORDINATE ALL SHUT-DOWNS AND TIE-INS WITH FERN FOREST RURAL WATER ASSOCIATION. CONTACT DOTTIE CARTER AT 803-548-0398 A MINIMUM OF 1 WEEK IN ADVANCE.
2. EXISTING FERN FOREST WATER SYSTEM VALVES TO BE OPERATED BY FERN FOREST RURAL WATER ASSOCIATION ONLY.
3. CONTRACTOR MAY NEED TO SCHEDULE SHUTDOWN WORK DURING LOW DEMAND PERIODS INCLUDING NIGHT WORK.

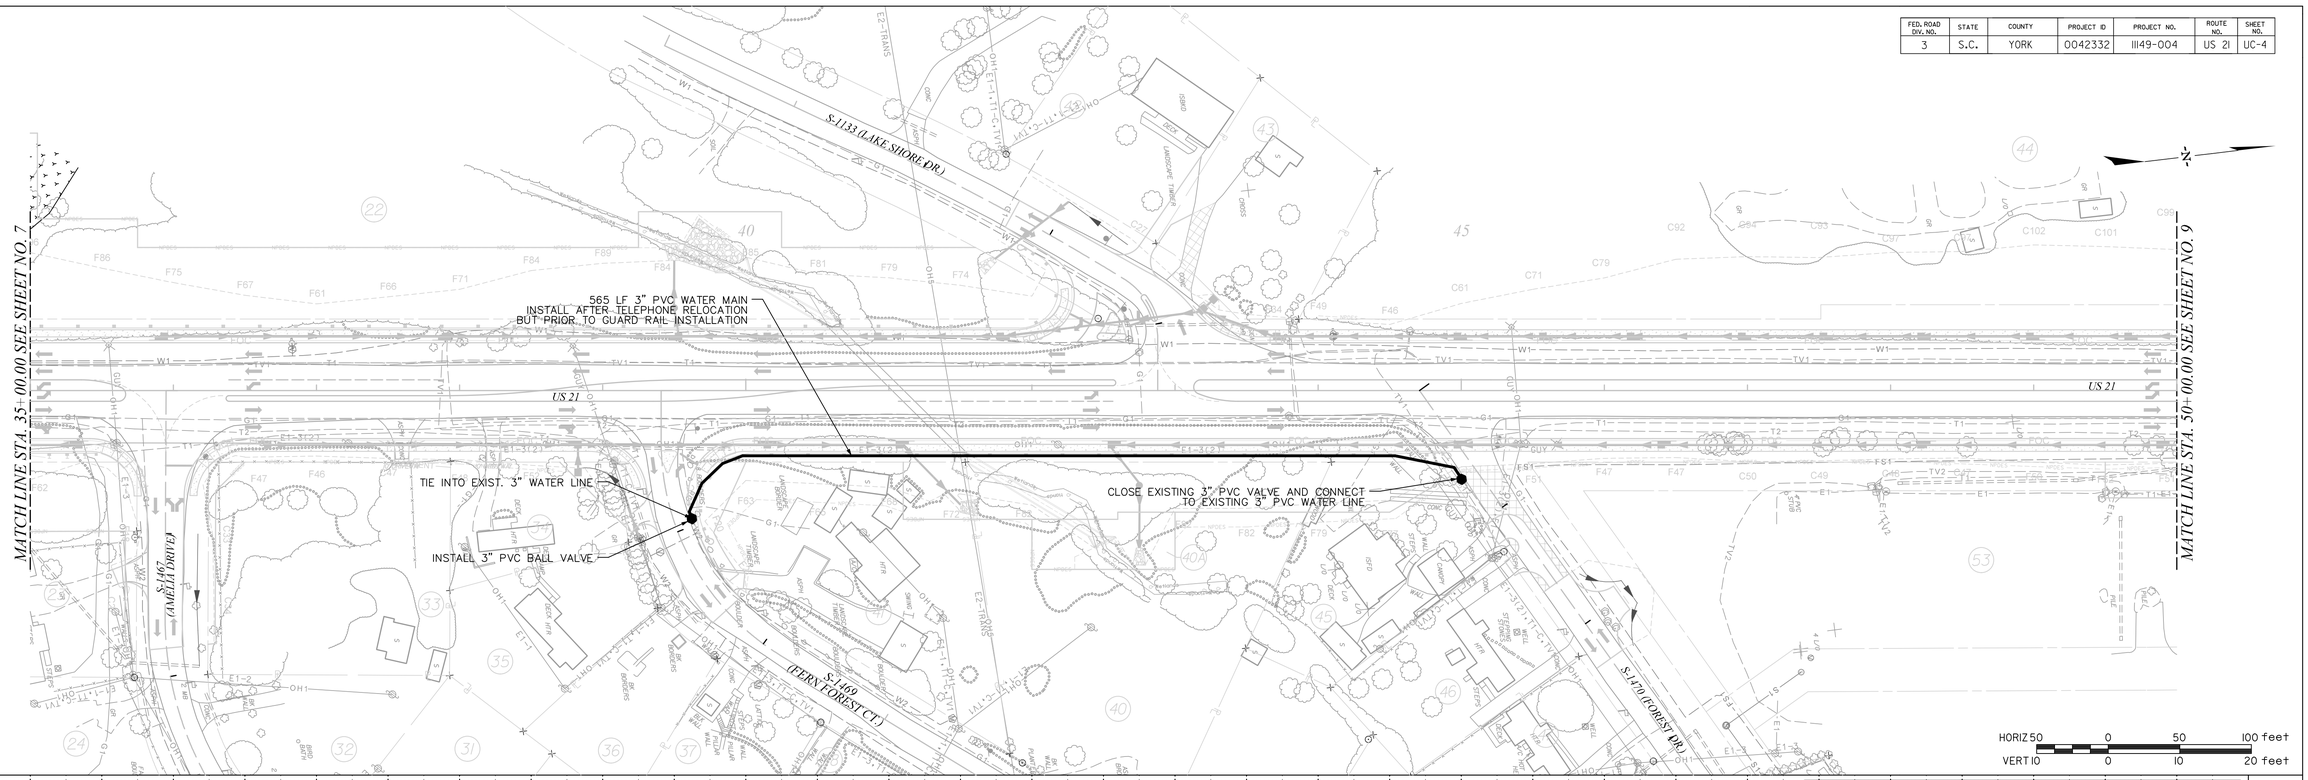
ANDREW S. VINE

SEQUENCE OF CONSTRUCTION

1. INSTALL PROPOSED 3" PVC WATER LINE WHERE INDICATED ON PLANS TO A POINT JUST SHORT OF TIE-INS.
2. PRESSURE TEST, FLUSH AND CHLORINATE AND PREPARE FOR FINAL CONNECTION PER SCDHEC REQUIREMENTS.
3. MINIMIZE SHUT DOWN TIME TO A SINGLE 4 HOUR PERIOD, COORDINATED WITH FERN FOREST RURAL WATER ASSOCIATION
4. SHUT DOWN EXISTING 3" PVC WATER LINES ON FERN FOREST CT AND FOREST DRIVE AND COMPLETE TIE-IN.
5. PLACE NEW 3" PVC WATER MAIN INTO OPERATION.



TESTING/INSPECTION NOTES

1. NOTIFY THE ENGINEER OF RECORD AND YORK COUNTY AT LEAST 48 HOURS BEFORE STARTING CONSTRUCTION OF SEWER AND WATER FACILITIES. THE ENGINEER SHALL PERIODICALLY INSPECT THE PROGRESS OF INSTALLATION AND SHALL COMPLETE A FINAL WATER AND SEWER INSPECTION. THE ENGINEER OF RECORD AND YORK COUNTY SHALL WITNESS PRESSURE TESTING OF THE WATER SYSTEM, AND AIR AND MANDREL TESTING OF THE SEWER SYSTEM. THE CONTRACTOR SHALL FURNISH, SECURE, AND PROVIDE ALL NECESSARY TESTING MATERIALS, EQUIPMENT, PROCEDURES AND CERTIFIED LABORATORY TEST RESULTS FOR USE WITH ENGINEERS FINAL CERTIFICATION OF COMPLETION.
2. WATER MAINS AND SEWER FORCE MAINS MUST BE HYDROSTATICALLY TESTED PER YORK COUNTY SPECIFICATIONS AND UNDER THE SUPERVISION OF A YORK COUNTY INSPECTOR AND THE ENGINEER OF RECORD.
3. DISINFECT WATER LINES AND PROVIDE ACCEPTABLE BACTERIOLOGICAL TEST FROM A CERTIFIED TESTING LABORATORY FOR USE WITH THE ENGINEERS CERTIFICATION OF COMPLETION. A MINIMUM OF TWO (2) SAMPLES, COLLECTED AT LEAST TWENTY-FOUR (24) HOURS APART, ARE TO BE TAKEN FROM EACH SAMPLING SITE FOR TOTAL COLIFORM ANALYSIS AND TOTAL CHLORINE RESIDUAL. THE NUMBER OF TEST SITES MUST INCLUDE ALL DEAD-END LINES AND SHALL BE COLLECTED A MINIMUM OF EVERY 1,200 LINEAR FEET.
4. SECURE FINAL OPERATIONAL APPROVAL FROM YORK COUNTY AND SCDHEC PRIOR TO ACTIVATION OF THE SYSTEM.

Water Supply Construction Permit
Bureau of Water

S.C. Department of Health and Environmental Control

Permission is Hereby Granted To: **YORK COUNTY UTILITIES**
6 S CONGRESS ST
YORK SC 29745

for the construction of a distribution system in accordance with the construction plans, specifications, design calculations and the SCDHEC Construction Permit Application signed by Andrew S Vane, Professional Engineer, S.C. Registration Number: 19911.

Project Name: **US21 NORTH PHASE 1& SC51**

County: York

Location: US 21 FROM SC 460 TO 700 LF SOUTH OF S-48 (SPRINGHILL FARM RD) SC51 FROM US21 TO NC STATE LINE

Project Description: Installation of approximately 258LF of 8" water line, 5,282LF of 12" water line, 886LF of 24" water line, 7 water meter relocations and 12 fire hydrant relocations in areas of conflict with newly proposed storm drainage system/structures.

Service By: Water will be provided by the York County Public Works (System Number: 4620002).

Special Conditions:
1. All construction and materials for this project must conform to the Standard Specifications for YORK COUNTY.

In accepting this permit, the owner agrees to the admission of properly authorized persons at all reasonable hours for the purpose of sampling and inspection.

NOTE: This is a permit for construction only and does not constitute State Department of Health and Environmental Control approval, temporary or otherwise, to place the system in operation. No written approval shall be issued to place a drinking water project into operation until approval is obtained to place any associated wastewater project into operation. An Approval to Place in Operation is required and can be obtained following the completion of construction by contacting the LANCASTER EQC OFFICE at 803-285-7461. Additional permits may be required prior to construction (e.g., stormwater).

Permit Number: **37404-WS**
Date of Issue: **February 28, 2024**
Expiration Date: Construction must be completed and the Approval to Place in Operation granted prior to **February 28, 2027** or this permit will expire.
