## **SECTION 1 INTRODUCTION**

### **1.1 Description**

York County is interested in receiving bids from qualified firms who can offer Ammonium Calcium Nitrate for Odor and Corrosion Control for Waste Water Systems for use by the York County Water and Sewer Department.

The intent of these specifications is to solicit bids for a solution of ammonium calcium nitrate for odor and corrosion control with the intention of purchasing an estimated total quantity of 12,000 gallons per month delivered to multiple locations within York County for an estimated grand total of 144,000 gallons per year.

### **1.2 Background**

York County Water and Sewer currently maintains over 100 miles of wastewater collection lines in its two systems on the east and west sides of Lake Wylie. Because the County is a collection system only with no treatment plants it is required to pump all of the wastewater collected to the City of Rock Hill for treatment at its Manchester Creek Waste Water Treatment Plant.

The system uses 45 wastewater pumping stations to pump an average of 3.5 million gallons of wastewater per day. Because of the utilization of nearly forty miles of pressure force main to convey the wastewater to the City of Rock Hill, hydrogen sulfide formation is inevitable. In 2013 York County completed a study with a consultant specializing in odor/corrosion control. The results of the study recommended continued use of the calcium nitrate solution currently being used by York County.
